## Examples for Converged Network Services

\*) VoD = Video on Demand, AoD = Audio on Demand

**SIEMENS**

© Siemens 5

## Example for Converged Services: TV-based Home Entertainment

- bandwidth of network access is driven by Home Entertainment and Video Communication.

**SIEMENS**

© Siemens 6

## LifeWork Applications: Business Impact of Push-to-talk

Western  
Europe

### Value Add

- Revenues in Fixed networks generated by IOC (Indoor Outdoor Convergence)
- Dedicated use case will benefit from convergence, Taxi, Cycle Courier, Police, Firefighters, Emergency services, Transportation services, Delivery services (DHL, ...)
- Faster service uptake for Mobile due to higher critical mass and use cases that require fixed end station

### Penetration (%)

2007: Mobile Consumers: 33%<sup>1</sup>  
 Mobile Business users: 10%  
 Fixed Users: Low Case: 0,5%<sup>2</sup>  
 Fixed Users: High Case: 3%<sup>2</sup>  
 (Nextel US: Mobile Business 70%)

### Revenue per active user

2007: Mobile Consumer: € 4,50 / month  
 Mobile Business: € 20,00 / month

### Major Barriers

- No critical mass of SIP capable fixed phones
- Service might be offered by ASPs/ISPs with portal based service, which provides a lot of challenges for Network Operator to obtain or maintain this new type of business

### ARPU Contribution

2007: Mobile Consumer: € 1,50 / month  
 Mobile Business: € 2,00 / month

<sup>1</sup> ICM User Survey: 06/2003 <sup>2</sup> Own analysis

SIEMENS

© Siemens 7

## LifeWorks Applications: Business Impact of Presence

Western  
Europe

### Penetration (%)

2007: 50% of mobile subscribers<sup>1</sup>  
 5% of fixed subscribers<sup>2</sup>  
 26% of internet users<sup>3</sup>

### Price

2007: Fixed/Mobile: € 1,50 per month  
 additional charge<sup>1</sup>

### Value add

- Service is basis for many other services (IM, Chat, PTT, ...) and implies to be offered in Fixed and Mobile network

### Usage

2007: For all IMs, Chats, PTTs,  
 Gaming Sessions

### Barriers

- Service in Fixed might be introduced by ASPs/ISPs mainly
- No critical mass of SIP capable fixed phones

### ARPU Contribution

2007: Mobile € 0,75 / month  
 Fixed € 0,1 / month

<sup>1</sup> ICM User Survey: 06/2003 <sup>2</sup> All SIP subscribers <sup>3</sup> All Instant Messaging Users

SIEMENS

© Siemens 8

## LifeWorks Applications: Business Impact of Instant Messaging

Western  
Europe

### Value add

- IOC will make it possible for fixed operators/ISPs/ASPs to bill for this service
- Mobile Operators benefit from installed base of Internet IM/Chat users
- Faster service uptake due to higher critical mass – enhanced reachability

### Penetration (%)

2007: 30 % of mobile users<sup>1</sup>  
26 % of internet users<sup>2</sup>  
5% of fixed users<sup>3</sup>

### Price

2007: Mobile: € 0,10 (per receiver)  
or € 5 flat monthly fee<sup>1/4</sup>  
Fixed Corporate: € 2 per user /month<sup>5</sup>

### Major Barriers

- Standardization on SIP or Wireless Village?
- No critical mass of SIP capable fixed phones
- Providers such as AT&T provide interworking with AOL/Yahoo based on AOL/Yahoo Messenger installed on mobile phones
- Challenge for Siemens to obtain business in case of portal based solution

### ARPU Contribution

2007: Mobile: € 1,50 / month  
Fixed: € 0,25 / month

- <sup>1</sup>ICM User Survey: 06/2003  
<sup>2</sup>Raymond James & Associates, Inc.  
<sup>3</sup>Deutsche Telekom  
<sup>4</sup>AT&T Wireless & Yahoo & AOL  
<sup>5</sup>MSN

## The Message remains: No market growth without Applications, IP and Ethernet as well as Services

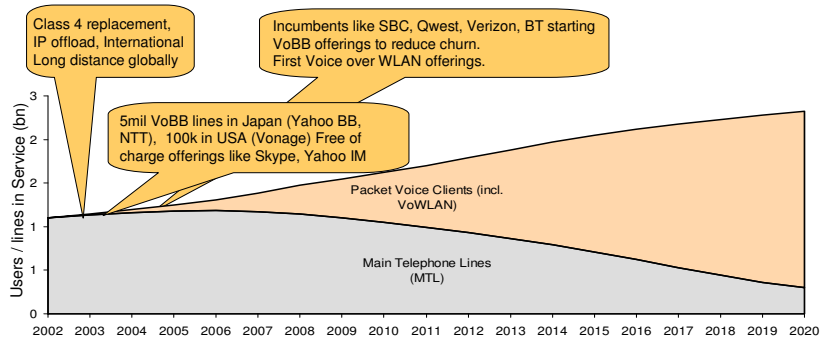

### Wireline Carrier Market Highlights and Trends

- ◆ The Wireline Carrier Market reached **52.4 bil € in 2003**. The **overall market growth (CAGR 03-09) is estimated at 7.6%**. **Asia/Pacific with most attractive growth rates (9.0%) among the top regions** (Western Europe 7.8%, North America 5.9%).
- ◆ The combination of secure wireless home/office networking with entertainment applications such as online gaming, networked Private Video Recording and digital audio is fertilizing the whole **CPE** industry.
- ◆ Most carriers making steady progress toward sustained profitability, but they continue to spend CAPEX conservatively to ease their debt burdens and improving cash flow. Instead of building new, most incumbents are **optimizing existing infrastructures**.
- ◆ **WLAN and WiMAX** are opportunities for wireline carriers to provide wireless and even mobility services
- ◆ **Blurring of Communication, IT and Entertainment** around the Internet does change the role of carriers
- ◆ **Delayering** of Hardware and Software; Modularization of HW and Software components
- ◆ A **new Security model** is a key issue for Next Generation Networks
- ◆ Asia Pacific is dominating the **Local Loop** Market in mostly all subsegments. While the DSLAM market is flat, new access alternatives such as **PON, WLAN and WiMax are growth drivers**.
- ◆ Vendors add **additional functions to NG SONET/SDH** such as WDM support, distributed cross-connect, and data aggregation and switching, enabling carriers to reduce the number of equipment in the metro network
- ◆ Service providers see the **need for packet-based services as a key driver** to deploy next generation voice equipment
- ◆ The **growth in Converged Network investment will not compensate the decline in traditional CO Switching**.
- ◆ **Data Network Convergence** and adoption of MPLS are driving factors in future network deployments
- ◆ As Carriers were not able to reduce OPEX significantly over the last few years (compared to their successful CAPEX investments), the **Service Market continues to open up for external service suppliers**.

## Tomorrow's Voice Service will be different from Yesterday's Voice Service

**Characteristics**  
**Technology:**  
**Topology:**  
**Tarif structure:**  
**Quality:**  
**Subscriber associated with:**  
**Services:**  
**Service Provision:**

**Main Line**  
*TDM, proprietary  
 centralized  
 time and distance*  
*Hard QoS, lifeline*  
*physical fixed line  
 voice centric  
 Telco*

**Packet Voice Client**  
*IP, standardized  
 De-centralized  
 flat rate, part of defined service bundle  
 Soft QoS, „lifeline“ through multiple access  
 alternatives  
 one personal number, network/access agnostic  
 data centric, voice is only one application  
 Telco, ISP, MSO, etc.*

**SIEMENS**

## Digitalization, Miniaturization, Internet and Broadband Access are underlying trends

### Wireline Carrier Market Highlights and Trends

#### Business Trends

- ◆ Revenue growth
- ◆ Competitive advantage
- ◆ Real-time enterprise
- ◆ Virtualization
- ◆ Globalization
- ◆ Business continuity
- ◆ Productivity
- ◆ Cost reduction

#### IT Trends

- ◆ The new systems architecture
- ◆ Web-based applications
- ◆ Business process fusion
- ◆ CRM, supply chain management or enterprise resource planning
- ◆ Web services
- ◆ Grid computing
- ◆ Disaster recovery

#### Telecom Trends

- ◆ Convergence
- ◆ Internet Protocol
- ◆ Broadband
- ◆ Wireless
- ◆ Mobility
- ◆ Video
- ◆ Net intelligence vs. Peer to Peer
- ◆ Net applications
- ◆ Decentralization
- ◆ Outsourcing of Services
- ◆ Distinction blurring with computing

#### Consumer Trends

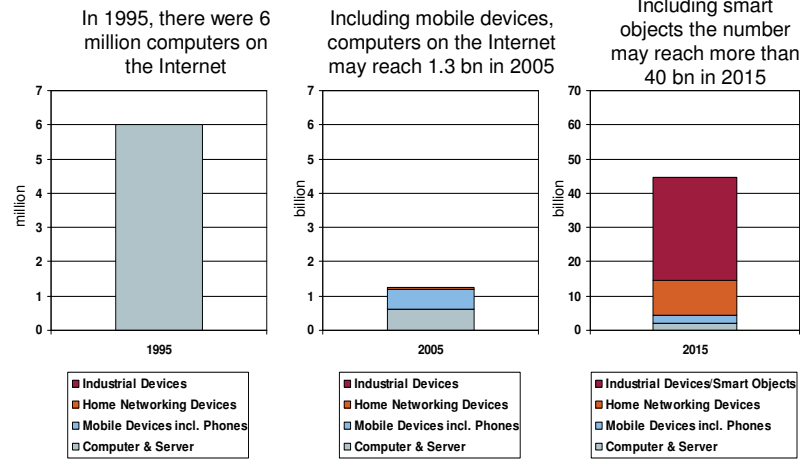

- ◆ Convergence Entertainment with Computing
- ◆ Networked and Connected Home
- ◆ Broadband to the Home
- ◆ Wireless/Power-line Home Netw.
- ◆ Personal Area Network
- ◆ Ad-hoc Network
- ◆ Video on-demand
- ◆ Smart Home
- ◆ Vehicular network

© Siemens 18

## Conclusions

The market is ready

- for cost savings
- for new applications
- for various kinds of convergence

Technology

- very mature for softswitches, gateways
- IMS successfully introduced
- provides for real value add

Let go !

## List of Abbreviations 1/4

### List of Abbreviations

IP	Internet Protocol
SMS	Short Message Service
MMS	Multimedia Messaging Service
TV	Television
IOC	Indoor Outdoor Convergence
ARPU	Average Revenue per User
ASP	Application Service Provider
ISP	Internet Service Provider
IM	Instant Messaging
PTT	Push to talk
SIP	Session Initiation Protocol
WLAN	Wireless Local Area Network
WiMAX	Worldwide Interoperability for Microwave Access
CPE	Customer Premises Equipment
HW	Hardware

## List of Abbreviations 2/4

PON	Passive Optical Network
DSLAM	Digital Subscriber Line Access Module
SONET	Synchronous Optical Network
SDH	Synchronous Digital Hierarchy
WDM	Wavelength Division Multiplexing
CAGR	Cumulated Annual Growth
IT	Information Technology
CO	Central Office
MPLS	Multi Protocol Label Switching
OPEX	Operational Expenditures
CAPEX	Capital Expenditures
TDM	Time Division Multiplexing
MSO	Multi Service Operator
QoS	Quality of Service
TISPAN	Telecoms & Internet Converged Services & Protocols for Advanced Networks
IETF	Internet Engineering Taskforce

**SIEMENS**

© Siemens 21

## List of Abbreviations 3/4

ITU-T	International Telecommunications Unions Telecommunications Sector
ETSI	European Telecommunication Standardization Institute
IAD	Integrated Access Device
NGN	Next Generation Networks
MPM	Mobile Presence Manager
PoC	Push to talk over Cellular
PS	Packet Switching
MGCF	Media Gateway Control Function
MGW	Media Gateway
GMSC	Gateway Mobile Switching Centre
MSC	Mobile Switching Centre
PSTN	Public Switched Telephone Network
CSCF (P, I, S)	Call State Control Function (Proxy-, Interrogating-, Serving-)
ALG	Application Layer Gateway
NAT-PT	Network Address Translation - Protocol Translator

**SIEMENS**

© Siemens 22

## List of Abbreviations 4/4

MRF	Media Resource Function
HSS	Home Subscriber Service
ENUM	E.164 Number Mapping
SS7	Signaling System #7
ISUP	ISDN User Part
IMS	IP based Multimedia Sub-System
