

"WiMAX Solutions - Integral Elements of Fixed Mobile Convergence Networks"

The trend towards mobility in voice telecommunications is undisputed and this trend will also take place in the area of broadband. WiMAX solutions will offer broadband services potentially equivalent to wire line broadband. The mobility aspect inherent in WiMAX solutions simply adds value to the broadband offering, as it leads to user self installation for low cost stand alone nomadic indoor or mobile broadband data access, or it can complement existing ubiquitous voice and lower data 2G and 3G services to provide cost effective any time anywhere voice and high speed data access.
