

Session 4

NGN and Broadband Planning Tools

Abstract

Ignat Stanev

- To meet countries' requests for assistance in the field of Network Planning and particularly planning of the evolution to NGN ITU has defined requirements to the NGN planning tools, divided in eight planning domains and has evaluated several planning tools.
- Broadband Access is part of the NGN requirements and needs to be carefully defined and modeled, so that corresponding planning tools could be developed and applied.
- This presentation gives an overview of the use and application of broadband planning tools suitable for NGN networks planning.
