

ITU-R Standards development on Broadband Wireless Access
(Alexandre VASSILIEV)

The presentation addresses the development of ITU-R standards on broadband wireless access (BWA) systems for both terrestrial and satellite applications. It first looks at the terrestrial standards on BWA describing where the ITU-R studies are conducted, some key publications and status of current studies. In a second part includes information concerning the satellite standards on BWA describing where the ITU-R studies are conducted, some key publications and status of current studies. The presentation also describes ITU-R key publications related to BWA, and the status of current ITU-R studies with reference to the relevant groups in which they are conducted.
