Agenda

- Intel WiMAX Vision & Broadband Internet
- Intel WiMAX Roadmap & Targeted Profiles
- WiMAX Benefits and Worldwide Momentum
- Intel Spectrum Policy Recommendations for WiMAX

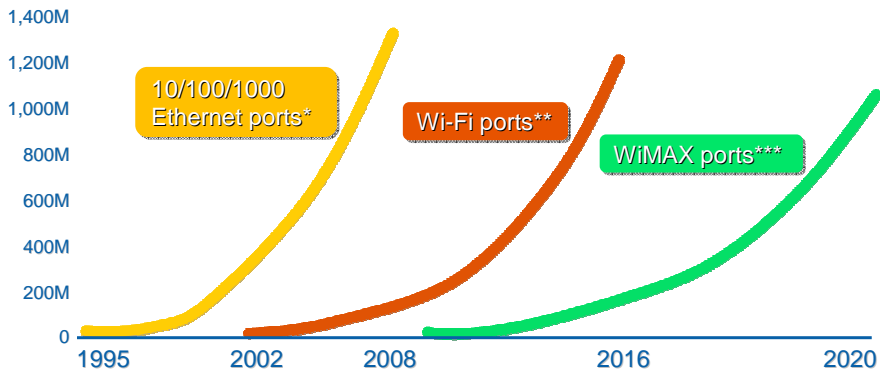

Vision for Mobile Internet

*Transparent
Affordable Internet
Access Wherever
You Are*

Wi-Fi + Mobile WiMAX* = 1st generation Mobile Internet

Intel's Vision: Three Waves of Internet Access

- Defining ITU 4G Standards
- WiMAX into notebooks
- Securing Spectrum

- Driving the Roadmap, Silicon
- WiMAX Open Patent Alliance coordination
- Significant Intel Capital investment

Intel WiMAX Solutions Roadmap

2004-07
"WiMAX Modems"

2008-09
"Nomadic & Mobile
WiMAX Devices"

2009 →
"Broad CE Devices"
WiFi+WiMAX Integration

6 August 2009

GPP

Why WiMAX

New business model

- New low cost embedded devices
- Low cost & flexible service plans
- New spectrum cheaper than 3G
- Open Internet access
- New activation & distribution models

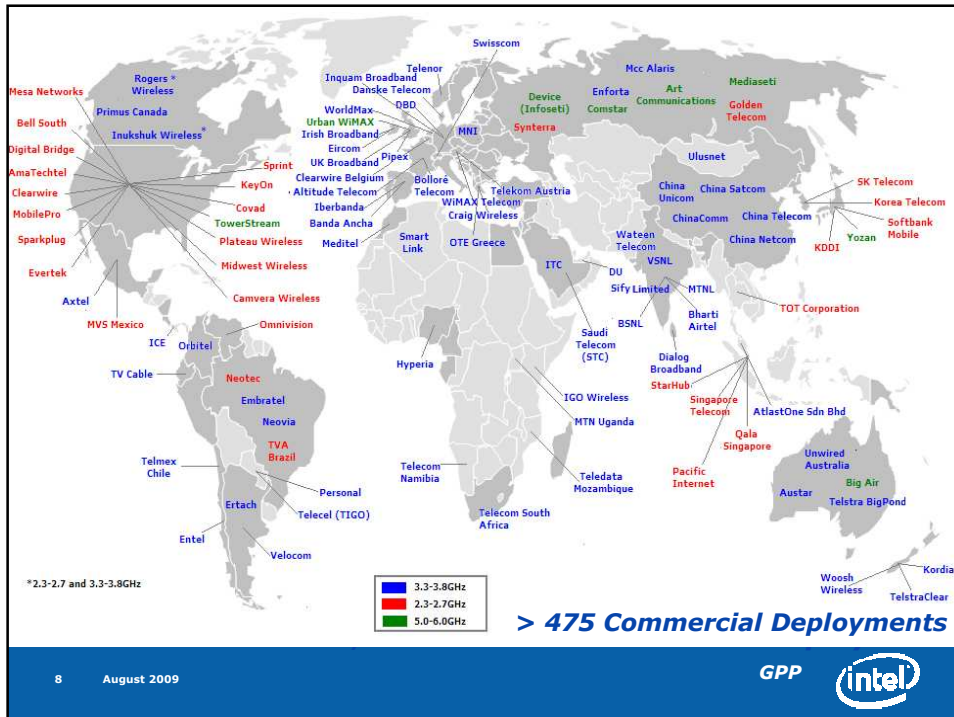

Technical performance

- Lowest cost, all IP network
- IEEE standard equipment with many vendors
- Best available multi-megabit bandwidth
- Scalable device design-in & certification

The Opportunity to Drive Fixed, Nomadic & Mobile Broadband

Illustration: Business Case for Turkey(*)

- **Target Market**
93% of Turkey population
- **Deployment**
Green field based on WiMAX IEEE 802.16e TDD
- **Wholesale Operator Spectrum** 2.5GHz - 30MHz
- **Services**
 - \$20 for Fixed, Nomadic and Mobile:
 - 2Mbps in Year 1
 - 4Mbps in Year 10
 - VoIP: \$10 with 25% attach rate
- **Adoption**
15% of population in 10 years
- **WACC** (Weighted Average Cost of Capital) 5%

Turkey Demographics

- Total POPs: 73 M
- Total HHs: 15.4 M
- Total km²: 781,000

Turkey is a Good Example of an Emerging Market

GPP

2.5GHz is More Desirable than 3.5GHz(*)

NPV Sensitivity to Frequency

CapEx Sensitivity to Frequency

Metrics	16e - 2.5GHz - 30MHz	16e - 3.5GHz - 30MHz
Payback	~3 years	5.5 years
NPV	\$2.46 B	\$2.01 B
Peak Capital Need	\$240 M	\$478 M

The 2.5GHz case has better NPV, shorter payback and needs less peak capital

*THIS IS A REPRESENTATIVE CASE STUDY FOR ILLUSTRATIVE PURPOSES ONLY

10 August 2009

GPP

16e Brings Significant Advantages over 16d (*)

Metrics	2.5GHz – 30MHz		3.5GHz – 30MHz	
	IEEE 802.16e	IEEE 802.16d	IEEE 802.16e	IEEE 802.16d
Payback	~3 years	7.5 years	5.5 years	9 years
NPV	\$2.46 B	\$131 M	\$2.01 B	\$48 M
Peak Capital Need	\$240 M	\$170 M	\$478 M	\$239 M

16e has much better spectral efficiency and better service penetration than 16d

*THIS IS A REPRESENTATIVE CASE STUDY FOR ILLUSTRATIVE PURPOSES ONLY

11 August 2009

A Sustainable Business Requires 30+MHz(*)

Metrics	IEEE 802.16e - 2.5GHz – 30MHz	IEEE 802.16e - 2.5GHz – 15MHz
Payback	~3 years	~4 years
NPV	\$2.46 B	\$1.57 B
Peak Capital Need	\$240 M	\$249 M

Allocating at least 30MHz – net band - of spectrum improves significantly the business case

*THIS IS A REPRESENTATIVE CASE STUDY FOR ILLUSTRATIVE PURPOSES ONLY

12 August 2009

Nationwide Licensing Catalyze Success

	Nationwide License	Multiple Regional Licenses
Network Cost	Single Core Network	<ul style="list-style-type: none"> Replicating Core network in every region is very expensive Additional costs to implement roaming infrastructure are required
Service Adoption	Seamless roaming	<ul style="list-style-type: none"> Roaming fees and different authentication methods/network profiles can cannibalize service adoption
Interference on Region Boundaries	No dead zone between the regions	<ul style="list-style-type: none"> 50-100 km separation might be required (dead zone) (if different technologies are used or when operators are not coordinated)
Digital Divide	A nationwide operator can leverage on its existing core network to cover undesired regions	<ul style="list-style-type: none"> Some regions might not be desirable (in terms of ROI) because of low population density and weak business case i.e. white spots

13 August 2009

GPP

Enabling Mobility is Key(*)

Metrics	Fixed-Nomadic-Mobile IEEE 802.16e - 2.5GHz - 30MHz	Fixed-Nomadic IEEE 802.16e - 2.5GHz - 30MHz	Fixed IEEE 802.16e - 2.5GHz - 30MHz
Payback	~3 years	~4.5 years	8 years
NPV	\$2.46 B	\$1.35 B	\$149 M
Peak Capital Need	\$240 M	\$312 M	\$728 M

Mobility brings new devices/usage, increases service penetration and improves the business case

*THIS IS A REPRESENTATIVE CASE STUDY FOR ILLUSTRATIVE PURPOSES ONLY

14 August 2009

GPP

Business Model Summary(*)

Metrics	IEEE 802.16e - 2.5GHz - 30MHz
Payback	~3 years
NPV (net present value)	\$2.46 B
Peak Capital Need	\$240 M

The case for a WiMAX 2.5GHz Nationwide Operator Utilizing 30MHz is Quite Healthy

*THIS IS A REPRESENTATIVE CASE STUDY FOR ILLUSTRATIVE PURPOSES ONLY

Summary - Recommendations for WiMAX

- Preferably 2.5 and 2.3 GHz band
- permit IEEE 802.16e TDD operation
- Minimum 30MHz of spectrum per license – guard bands excluded
- Nationwide licenses to avoid market fragmentation and weaken the operator business case
- Wholesale model can help reduce the digital divide in the rural areas and villages – cooperation with local governments and municipalities to subsidy service

Create the Conditions to Accelerate Broadband Adoption and Reduce the Digital Divide
