

## Abstract Session 1.txt

### Session 1

#### SMS4DC – ITU BDT Tool for computerised spectrum management

This presentation will introduce Spectrum Management System for Developing Countries (SMS4DC) which is a computer program that provides assistance in the technical and regulatory procedures for managing the spectrum allocated to the Land Mobile, Fixed and Broadcasting services, in full compliance with the relevant ITU recommendations. Examples will be provided how it can use a global digital terrain map and a colour graphical/geographical interface and there will be information about some recent developments like the inclusion of the ITU procedures for the introduction of digital broadcasting (GE06 Agreement), interfaces to proprietary monitoring systems and databases and an interface to the free Google Earth™ satellite mapping program. Detailed information about the software can be found on:
