# ITU-D Regional Development Forum 2010 NGN and Broadband for the Arab Region (Cairo, Egypt, 13 to 15 December 2010)

#### Developing NGN Regulatory Ecosystem for Emerging Markets

Satya N. Gupta
Chief Regulatory Advisor
BT Global Services-India & SAARC

#### **Agenda**

- NGN Ecosystem Introduction
- Regulatory Challenges for NGN
- Existing licensing regime India
- NGN in India SWOT analysis of present framework
- Regulator's consultation process
- Way forward
  - Unified Licensing
  - Phased Migration
  - ◆ Functional Separation A Wholesale concept
  - → NGN Regulatory ecosystem for emerging markets

#### **NGN** - Introduction

Next Generation Networks as the name suggests are the networks of future based on emerging technology of IP which is leading to convergence of networks, services and markets and providing efficiency and flexibility.

NGN are based on the layered approach wherein services provision is separated from the network infrastructure.

These are enabling the operators to increase their depleting ARPU by providing advanced value added services in addition to plain (vanilla) voice.

The incumbent operators are going for NGN by replacing their existing networks to compete on the technology front and being able to provide innovative value added services, cutdown on Opex as well as to make their network future-proof

3

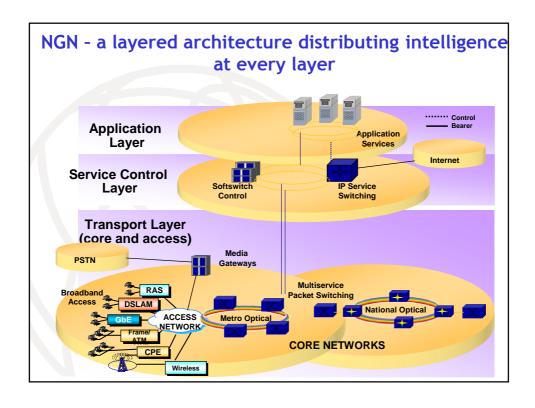

#### **Definition of Next Generation Network (ITU)**

Next Generation Network (NGN) is a *packet-based* network able to provide services including Telecommunication Services and

Able to make use of multiple Broadband, QoSenabled transport technologies in which servicerelated functions are independent from underlying transport-related technologies;

It offers *unrestricted access* by users to different service providers.

It supports generalized *mobility* which will allow *consistent and ubiquitous* provision of services to users.

#### **Advantages of NGN**

- NGN makes use of best of both the worlds (flexibility, efficiency & Innovativeness of IP and QOS, Security, Reliability, Customer-friendly features of proven PSTN
- Advantages for service providers
  - Reduced CAPEX due to integrated and efficient IP-based technology (Packetize or Perish)
  - Reduced OPEX due to transmission cost saving, less power consumption, less space requirement, less O&M costs
  - Ability to offer increased range of services
  - More flexibility increasing market penetration by offering personal service customization and management
  - Single network layer for management
  - No need for separate networks for voice, data and video
- Advantages for subscribers
  - Reduced call charges
  - New innovative services at a fast speed
  - Single connection and bill for voice, data, video, mobile (Quad play)

#### What is NGN Ecosystem?

- Next Generation Services Converged (quad-play-VOIP, data, video, mobile)
- Next Generation Access High speed (Broadband) IP based connectivity (ADSL, VDSL, WiMax, Digital Cable TV, FTTH, PLC)
- Next Generation Transport Carrier Ethernet, IP-MPLS
- Next Generation Architecture Service oriented (SOA), Layered (transport, control, application)
- Next Generation Mobile 3G+(B3G)
- Next Generation Internet IPv6
- Next Generation Interconnect Cost of Capacity and Quality based
- Next Generation Licensing Unified & Class, technology-neutral and service agnostic
- Next Generation Regulation Converged, differentiated/asymmetric, facilitating, Light-handed

7

#### **Driving forces for NGN**

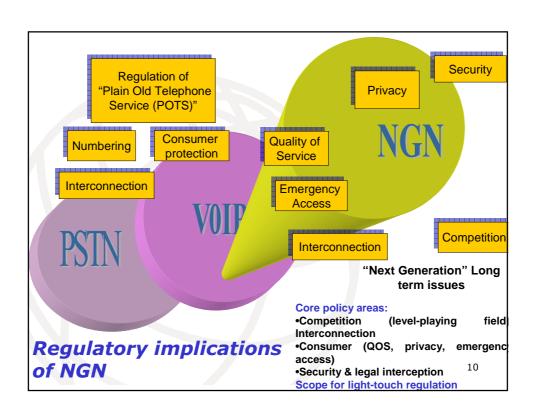

- Emerging Markets Motivation
  - Operational cost savings, new services for increased ARPU
  - Predominantly mobile users, less investment in legacy infrastructure, Greenfield Environment
  - Low tele-density and Broadband penetration
  - Address space limitations,
  - Government's / Regulator's NGN initiatives
  - Roll-out of networks by more new entrants

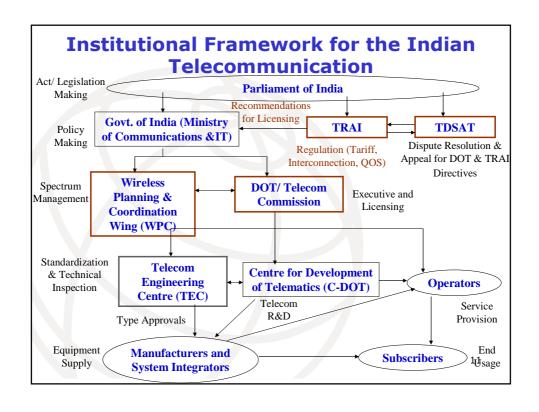

## **NGN- A Regulatory Opportunity**

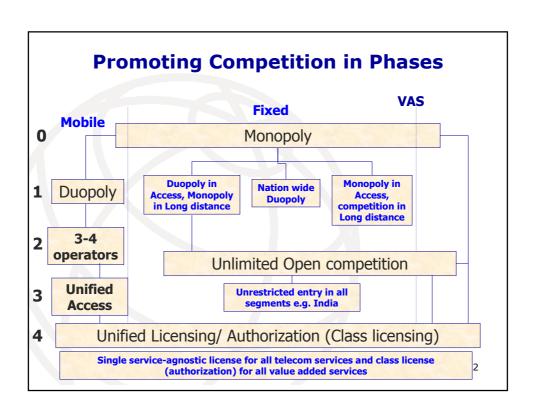

#### As per ITU:-

"The move to NGNs represents an opportunity to establish in advance ground rules for ensuring the continued passage to effective competition and minimise damage during transition".

It is in contrast to the regulation of the legacy network, which came after the networks were actually in place. That is why, NGN is different.

#### Service specific licensing in India

Type of Service	Service Area	Connectivity with PSTN	Entry Fee	Annual License Fee (% revenue share)
ILD	International	Full PSTN/PLMN Interconnection	Rs.25 million	6%
NLD	National	-do-	Rs. 25 million	6%
Unified Access (Fixed and Mobile) (UASP)	Circle	-do-	Different for each Circle ( Rs. 16 billion for all India)	Type A - 10% Type B - 8% Type C - 6%
VSAT	National	No Interconnection	Rs. 3 million	6%
Internet Service Providers	National, Circle wise	-do-	Rs. 2 Million (All India)	Nil (6% for Internet Telephony)
Public Mobile Radio Trunked Service	City wise and Circle wise	Limited One way	Nil	5%
Infrastructure Providers Cat I	National	NA	Nil	Nil
OSP (Other Service Providers)	Site Specific	Application services	Nil	Nil

#### Salient features of existing regime

- Unified Access (technology-neutral) Coexistence of Mobile (GSM/ CDMA), Fixed, Voice, Data
- Very low termination rates (< 0.5 cent/min) (same for fixed and mobile)
- Very low carriage charges (0.5-2 cent/min)
- Very low mobile tariff (1 cent/min)
- Very low long distance tariff (2 cent/min)
- Very low voice ARPU (4 US\$/month)
- Very low Broadband charges (5 US\$/month)
- Low rural tele-density (< 25%)</p>
- Highest Mobile additions per month- (> 15 million)
- Overcapacity for international bandwidth (17 Tbps/ 500 Gbps)
- Wide spread national backbone (12 lakhs Km)
- Dominance of wireless access (750 million mobiles vis-à-vis 38 million wirelines)
- Large cable TV homes population- (90 million)

#### **NGN India – A SWOT Analysis**

- Strength/Drivers
- Weaknesses/Challanges
- Opportunity/ Benefits
- → Threats/ Risks

15

#### **Strength of present licensing framework**

- Open unrestricted competition in all segments (including mobile)
- Access service provision unified (broadband, triple play, internet telephony permitted in addition to voice, fixed/ mobile/ WLL)
- General technology-neutrality (technology option left to operators)
- General tariff forbearance (Except leased lines where competition is not enough)
- Broadband policy in place (Govt mission to accelerate broadband)
- Access network dominated by wireless (750 million out of 790)
- More than 15 million mobiles additions per month
- 90 million cable TV homes and 38 million wirelines
- Proactive regulator (initiatives on emerging issues like IP based NGNs,IPv6,UnifiedLicensing,Resale in IPLC, VOIP, MVNO, MNP, CPS through Calling cards, Abolition of ADC,Cost based MTC,CPNP etc.)

#### Weaknesses/Challenges

- Multiple regulatory agencies licensor (DOT), spectrum management (WPC), technical regulation (TEC), interconnection, tariff & QOS regulation (TRAI), dispute settlement (TDSAT), Security Agencies, Competition Commission.
- Non-unbundling of local loop (no competition for DSL based broadband)
- Unidirectional ,Analog Cable TV infrastructure
- Legacy interconnection regime (Minutes of Usage, MOU based), CPNP (Calling Party Network Pays)
- General Resellers (non-facility based operators) not permitted
- Value-added service providers (ISPs) not treated as interconnection entity
- Unrestricted VoIP not permitted yet for ISPs
- No Functional Separation Regime

17

## **Opportunity/ Benefits**

- Large unmet demand for telecom services (Rural tele-density < 25%, Broadband penetration - 1%)</p>
- Mobile coverage still 65% (semi-greenfield environment to expand)
- Rationalization of network resulting into simplicity and reduced OPEX
- Network expansion by using future- proof technology (NGN)
- EX-ANTE regulation for NGN to remove uncertainties
- Involvement of industry in various issues fully in a pro-active manner
- Bring Quad play services to rural area (bridge digital divide)

### **Threats/ Risks**

- Standards and interoperability issues yet to be settled
- Technical challenges in Emergency access/ Security monitoring
- High CAPEX without guaranteed corresponding increase in ARPU
- Project oriented risks due to huge scope and costs in migration

19

# **NGN Consultation Process - India**

#### Issues for Consultation

- 'Light-touch' v/s 'Tight' regulation or regulatory withdrawal (hands-off, forbearance)
- Ex-ante v/s Ex-post regulation
- Level-playing field issues Service-based competition, Network-based competition, Access competition
- Regulatory incentives standardization, transition timetable, special rate of return, alternate access paths, special concession for deployment in rural areas
- QOS regulation for NGN
- Interconnection regime in NGN context interconnecting parties, interconnection products, types of interconnection, basis for charging, interconnect exchange
- Mandating for emergency access 100, 101 etc
   Security aspects of NGN Adherence to requirements for Legal Interception and Monitoring (LIM), Encryption

## NGN Consultation Process – India Findings from Public Consultation

- Lack of awareness about NGN and need for training/ educational programmes
- Lack of enough infrastructure for considering any service based competition
- Need for a single licence to provide all services (data, voice, broadcast through same network)
- Need for detailed consultation on interconnection issues and QOS regulation in NGN environment
- Need for accelerating the Broadband penetration for access migration
- Need for deliberations on technical and standardization issues with special reference to interoperability, emergency access and legal interception and security monitoring
- Need for cross-industry collaboration under the aegis of regulator to deliberate upon time table for NGN migration as well as interconnection issues (NGN-eCO)

2

#### NGN Regulatory Challenges-Emerging Markets

- (i) Death of distance and blurring of the traditional boundaries between Access (local) providers and long distance carriers.
- (ii) VOIP as a "disruptive technology" putting a challenge for the regulators to perform a balancing act in maintaining level playing field.
- (iii) On-going technological developments causing drastic impact on the telecom scenario forcing a re-look at the service based licensing and geographical area based regulatory regime including Numbering systems.
- (iv) Level playing field issue between the licensed telecom operators and value added service providers.
- (v) Need for new interconnect products based on capacity and quality (V&V) in place of those based on distance and duration (miles & minutes).
- (vi) Access to emergency services like police control room, fire services, medical help etc. (PSAP, E 911 (US), 999 (UK), 100 (India))
- (vii) Security monitoring like legal interception & monitoring (LIM), wiretap, CLI etc.

#### Unified Licensing Regime - Recommended

#### Three categories of licenses:

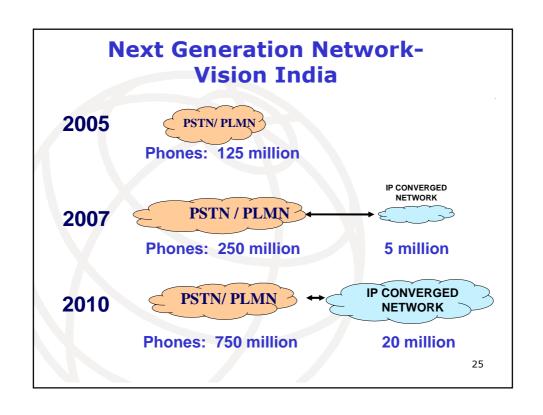

- 1. Unified License All Public networks including switched networks, irrespective of media and technology, capable of offering voice and/or non-voice (data services) including internet telephony. Examples: Unified Access Service, NLDO, ILDO, Broadcast (eg. DTH, FM Radio, TV Broadcast).
- 2. <u>Class License-</u> All services including satellite services which do not have both way connectivity with Public network. (The concept of niche operators is being included to promote growth of telecom services in rural/remote/backward areas from tele-density point of view).
- 3. <u>Licensing through Authorisation</u> Services for provision of passive infrastructure and bandwidth services to service providers, Radio Paging, PMRTS and Internet Services.

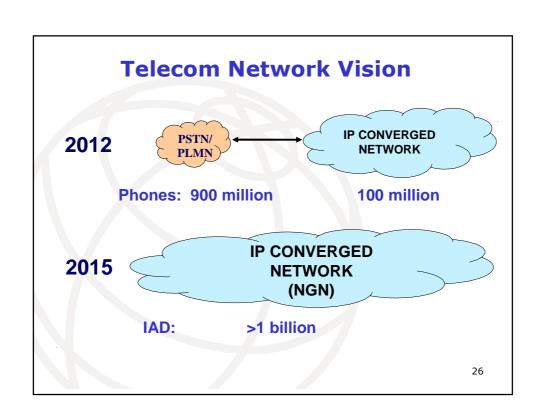

23

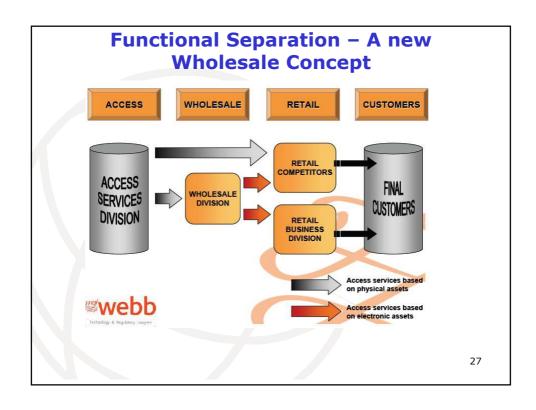

#### Major operator's approach towards NGN

#### **Five-fold Migration Approach**

- Create nationwide IP-MPLS backbone network (Fiber-based, Packetisation)
- Create access agnostic Metro Area Networks (MAN) (subscriber access capable of convergent voice, video and data services over DSL, Optical
- Ethernet and Wireless technologies)
  Implementation of VOIP based Class 4 services
  (Packetize Trunk Switches)
- Implementation of Class 5 services over packet
- network (Packetise Access Switches)
  Offer Multimedia/ Triple play services including **VOIP and IPTV to Broadband subscribers**

# NGN Regulatory Ecosystem for Emerging Markets

A converged regulator for ICE (single regulator for Telecom, IT & Broadcasting)

A single technology-neutral, service-agnostic license (one license - one network - all services) to facilitate Convergence and Efficiencies of scale

A Class Licensing Regime (Authorisation/Registration) for Value Added Services to facilitate Innovation

A cost of capacity based, open access, interconnect regime and light handed regulation to promote Competition and Investments

Functional Separation to encourage full infrastructure sharing in open manner and to unlock the potential of existing assets to promote Co-Opetition
