

Further to your TeleFax Ref DM-192 of the 3<sup>rd</sup> of Aug 2004, we have the following regulatory principles that we consider essential in the promotion of low cost broadband and internet connectivity:-

- 1- Allow voice over IP to be offered, and encourage the entry of operators using such business models, enabling what many perceive to be a killer application
- 2- Mandate the availability of some form of unbundling, especially bitstream access, based on economic costing principles to encourage supply of broadband
- 3- Ensure the reliance of international connectivity from the incumbent is limited by either making available international capacity at cost or creating a local not for profit internet exchange.
- 4- Engage the incumbent to offer innovative solutions in collaboration with local communities, where otherwise these communities would remain un served.

Kind Regards

Munther Z. Borgan
