

ITU-T Workshop

“Opportunities and Challenges in Home Networking”

Abstract

Geneva, 13 – 14 October 2005

Speaker: Christele Bouchat, Alcatel Bell
Session: Session 2: Home Network Architecture and Technologies
Title of Presentation: Access and Home Network Architectures, and Bridging the Two

The speaker is representing the DSLHome working group of DSLForum. The presentation covers the work done in DSLHome for residential gateway management and its extensions. The presentation compares at a high-level the work done in DSLHome and the ITU-T recommendation J.190. The presentation concludes that the CPE WAN remote management protocol of DSLHome is agnostic of the access technology used and represents, for the operators, a first hook into the home network.
