

ITU-T Workshop

“Opportunities and Challenges in Home Networking”

Abstract

Geneva, 13 – 14 October 2005

Speaker: AKIRA TOBA
TOSHIBA CARRIER CORPORATION

Session:7 The Home Networking Future: Efforts and Challenges

Title of Presentation: Interaction between A&V Equipment and Home Apparatus

Presently, Home Network protocols for A&V Equipment, PC, and Home Apparatus are existing separately in home and many Home Network-ready products with each protocol have been marketed in the world so far.

However, more useful applications and services can be built by connecting different networks.

This presentation introduces overview of ECHONET™ as a representative of the Home Network protocol for Home Apparatus and also shows the practical method to connect Home Apparatus with A&V Equipment suggested by ECHONET™.
