**Company Profile**

Memory Stick has already been widely adapted in a mobile phone with built-in camera, a mobile phone with built-in audio player, and PHS terminal with music download function as a small factor recording media to store music and still/motion picture data. In the Memory Stick booth, we propose and demonstrate solution for mobile phones in the next generation using Memory Stick PRO, which provides high-speed data transfer (160Mbps) and Memory Stick Duo, which can be easily built into small portable devices.
