Company Profile

TurboConcept is a leading provider of IP cores for digital communications, building on its unique know-how in Turbocodes and related iterative techniques. Our FEC IP cores are widely adopted in standard-based as well as proprietary systems. They are highly appreciated by satellite modem manufacturers and system integrators for their technical excellence and for time-to-market. We also offer support services and adapt our products to customers' specific constraints. Products exhibited (IPs for Xilinx and Altera FPGAs): TC1000 – DVB-RCS Turbo decoder, 12 Mbits/sec; TC30xx and TC34xx – IEEE-802.16 TPC decoders covering low-cost and high-end applications, 38–190 Mbits/sec; TC4xxx: DVB-S2 decoder.
