

Radiocommunication Bureau (BR)

Circular Letter
CR/385

Geneva, 27 August 2015

To Administrations of Member States of the ITU

**Subject: Notification of frequency assignments to terrestrial services -
New on-line validation tool**

The purpose of this Circular Letter is to announce the availability of a new complementary tool for performing the validation of terrestrial electronic frequency assignment notices before their submission for updating the Master Register or the Terrestrial Plans.

This tool is based on a web interface developed by the BR and is accessible via the ITU website at: <http://www.itu.int/ITU-R/terrestrial/OnlineValidation/Login.aspx>.

It allows for a complete validation of all data elements that are to be notified for each class of station in accordance with Appendix 4 of the Radio Regulations and the different Agreements.

It permits the uploading of as many files as desired in batch mode, and at the end of the validation of each file, a complete validation report is sent back to the user via e-mail. Please note that this new web service is accessible to all TIES users free of charge.

A provisional version of this application was presented and used for the workshops during the World Radiocommunication Seminar 2014 (WRS-14) and the Regional Radiocommunication Seminars held in 2015. Since then, it has been extensively used by some administrations and the overall feedback received was extremely satisfactory.

In order to help in expediting the treatment of notifications, all notifiers from administrations are invited to make use of this new tool to check, and eventually correct, the notification files before submitting them to the BR via WISFAT. Further assistance on the use of this new web service could be requested from brtpr_dp@itu.int.

The Bureau remains at the disposal of your Administration for any clarification you may require with respect to the subject covered in this Circular Letter.

François Rancy
Director
