

OPINION ITU-R 69

**FIELD-STRENGTH MEASUREMENTS FOR FREQUENCIES  
BELOW ABOUT 1.7 MHz**

(Study Programme 31D/6)

(1982)

The CCIR,

CONSIDERING

that there is a need for improved propagation data at frequencies below about 1.7 MHz,

IS UNANIMOUSLY OF THE OPINION

1. that administrations and organizations which can make field strength and phase measurements, or which can provide suitable transmissions, should be encouraged to participate in measurement campaigns, especially in those parts of the world where few measurements have been made;
  2. that administrations and organizations should communicate their results to the Director of the CCIR. The standardized form described in Opinion 46 should be used where possible.
