

OPINION ITU-R 92-1\*

**HARMONIZATION OF ACTIVITIES FOR  
FUTURE MOBILE COMMUNICATIONS**

(1993-1997)

The ITU Radiocommunication Assembly,

*considering*

- a) that the Radiocommunication Sector has a program on International Mobile Telecommunications-2000 (IMT-2000) which would enable worldwide compatibility;
- b) that major programs for future mobile communications within each Region are progressing rapidly;
- c) that resources of budget, manpower, and planning expertise are available to these regional programs which substantially exceed those readily available to the Radiocommunication Sector;
- d) that, without international coordination, these regional programs would tend to diverge;
- e) that international standards for IMT-2000 will not be effective unless these regional programs are harmonized;
- f) that the production of ITU-R Recommendations on IMT-2000 will be an important step in achieving this harmonization,

*is of the opinion*

**1** that the ITU, as a matter of policy, should make every effort to persuade regional bodies, national authorities and other appropriate entities to support the Radiocommunication Sector in an explicit manner in its development of Recommendations on IMT-2000 and strongly encourage regional organizations to work together towards a single worldwide standard.
