Title: Oppose decentralization

Abstract

Decentralization of GTO from Geneva will not bring any significant impact/benefit to the members' countries. Centralization will ease the administration, management, documentation and operation. Most importantly, there will be more collective decision-making being made when all issues will be debated in one place.

Introduction

GTO is an important organization that manages the issues pertaining to international telecommunications. Decentralization of GTO will not benefit the members and would not provide any significant impact to the members.

Discussion

Centralization of GTO is important to ensure the ease of administration, management, documentation and operation. The most important are any issues pertaining to Telecommunications that will be discussed, debated and followed by all member countries. As a result, any recommendation on technical standard, spectrum and telecommunication development will be adopted by many countries. On the other hand, decentralization will only make some of the suggestion/recommendation to be adopted by some member countries only. Other than that, it will add more complexity on the administration, management and operations.

Conclusion

As conclusion, we oppose the suggestion to decentralize GTO as it will not give any significant impact or improvement to the organization. Decentralization will only make the discussions or decisions made only effective for some regions and will not benefit the industry as a whole.
