Content

What does this tutorial cover?

■ Four strategic options to promote media accessibility

- ➔ Three strategies for content accessibility
- ➔ One strategy for business processes

Outcomes

What will I be able to do?

At the end of this session, you should be able to answer questions such as:

- **What can be done to improve TV accessibility?**
- **How can an understanding of the value chain and the stakeholders help optimise media accessibility?**
- **What can we do to make media other than TV accessible?**

Accessibility actions

4 Strategies

1. **Usability:** Do something to make content as intelligible as possible
2. **Access services:** Offer captioning, audio description, sign language
3. **Intelligent devices:** Make devices truly assistive
4. **System of systems:** Address platform issues end to end (e2e) from source to user

#1. Improve TV usability

Example 1: pictures we can't see

#1. Improve TV usability

Example 2: audio we cannot understand

**If we can do it for football
we can do it for other programs, too.**

#1. Improve TV usability

Example 3: emergency alerts some do not get

#2. Offer Access Services

We all have different needs

Viewers born deaf or with hearing impairment

Signing and captioning

Viewers who are blind or have visual impairments

Audio description (AD) or spoken captions/subtitles

Young viewers of foreign language programs

Dubbing or voice-overs (lectoring)

Subtitles for young viewers whose parents are deaf

Viewers of programs with people who speak fast or unclearly

Same language captions

Subtitles for persons who are deaf or hard of hearing (SDH)

#2. Offer Access Services

Understand those different needs

© 2011 Louise Fryer, Goldsmiths, University of London

Audio Description and Audio Subtitling: Who Needs It?

AD user personas

Audio Description (AD) and Audio Subtitling (AS) provide access to audiovisual media to people who may otherwise be excluded. What is striking about the audience for these services is its sheer diversity. To illustrate this, here are 12 'personas'. None of these people are real. They are composite characters, based on research interviews with actual users of AD and AS in the UK. They are representative of the potential audience across EU member states.

Hjælp til tekst-tv

Hjælp til program-oversigten

Spørgsmål og svar

Mange danskere har brug for at skrue ekstra op for lyden eller sætte undertekster på, når de ser fjernsyn. Synes du også, det kan være svært at se, høre eller forstå det hele? Så kan du her få flere gode råd til, hvordan du kan få det hele med på DR.

Undertekster

Tegnsprog

Synstolkning

Hjælp til programoversigten

Spørgsmål og svar

Er der også undertekster til live-programmer?

Ja, DR simultan-tekster en række live-programmer. Det drejer sig om TV Avisen kl. 18.30 og 21.00, Jersild Live, Horisont, Kontant, 21 Søndag og Penge.

#3. Assistive technologies

British text-to-speech will create talking TVs

Can even speak Gaelic and Welsh

By **Asavin Wattanajutra**

Wed Jun 09 2010, 16:15

LOSING A REMOTE CONTROL to change channels might soon be less of a problem with the development of British [technology](#) that enables your TV to talk to you.

Ocean Blue Software has developed low cost text-to-speech technology called 'Talk TV', which is being built into set top boxes from Korean [company](#) Arion Technology and branded by retailers from August.

Aimed particularly at blind or partially-sighted owners, it can use speech technology to tell them what's on and when it's on. The speed and verbosity of the voice can be adapted, while a different kind of remote control will be provided.

The development has already won design awards, and has been developed with the support of the Royal Institute for the Blind.

The technology has been developed with digital chip company ST Microelectronics, and the next stage of development looks to be that owners will be able to talk back to their TVs using commands such as 'channel up', 'channel down' and 'volume up', 'volume down'.

Talk TV will be available in different languages and dialects. It is slated to support Scottish Gaelic and Welsh in the UK, but it remains to be seen how the technology will cope with the notorious Geordie accent. μ

#4 System of systems

e2e Platform issues

- How do vulnerable viewers living alone handle the switch from analogue to digital TV?
- Can they connect a Set Top Box to their TV set?
- Can they tune or re-tune their receiver as needed?
- What does an elderly viewer have to do in order to watch a programme with subtitles?
- How do blind people discover something they want to watch?
- Are the access services mentioned in the Electronic Programming Guide (EPG) - also for repeats?

#4 System of systems

Example: Viewers with hearing aids

**User scenario:
What does the user do
when the phone rings?**

Design Awards

Fashion Meets Technology

The design of medical instruments and health-care equipment has improved immensely in recent years. This miniature hearing aid, from Danish outfit Oticon, looks more like something out of a James Bond movie than the clunky earpieces of yesterday. Aimed at the image-conscious Baby Boomer generation, the stylish Oticon Delta

Activity 2: Strategic priorities for making media accessible

- Work in groups
- Use one of the 6 worksheets for activity 2 (on following slides)
- Discuss what the **current** strategic priorities are for the organisation selected.
- Identify possible changes to the strategic priorities for the same organisation.
 - ➔ What needs to be changed?
 - ➔ Why is change necessary?
