“How does a person go broke? Gradually, then suddenly”

Ernest Hemingway

How Long Until Computers Have the Same Power As the Human Brain?

Lake Michigan's volume (in fluid ounces) is about the same as our brain's capacity (in calculations per second). Computing power doubles every 18 months. At that rate, you see very little progress for a long time—and suddenly you're finished.

intelligence

Total digitization and ubiquitous connectivity will require new norms, rules and markets, and new social contracts

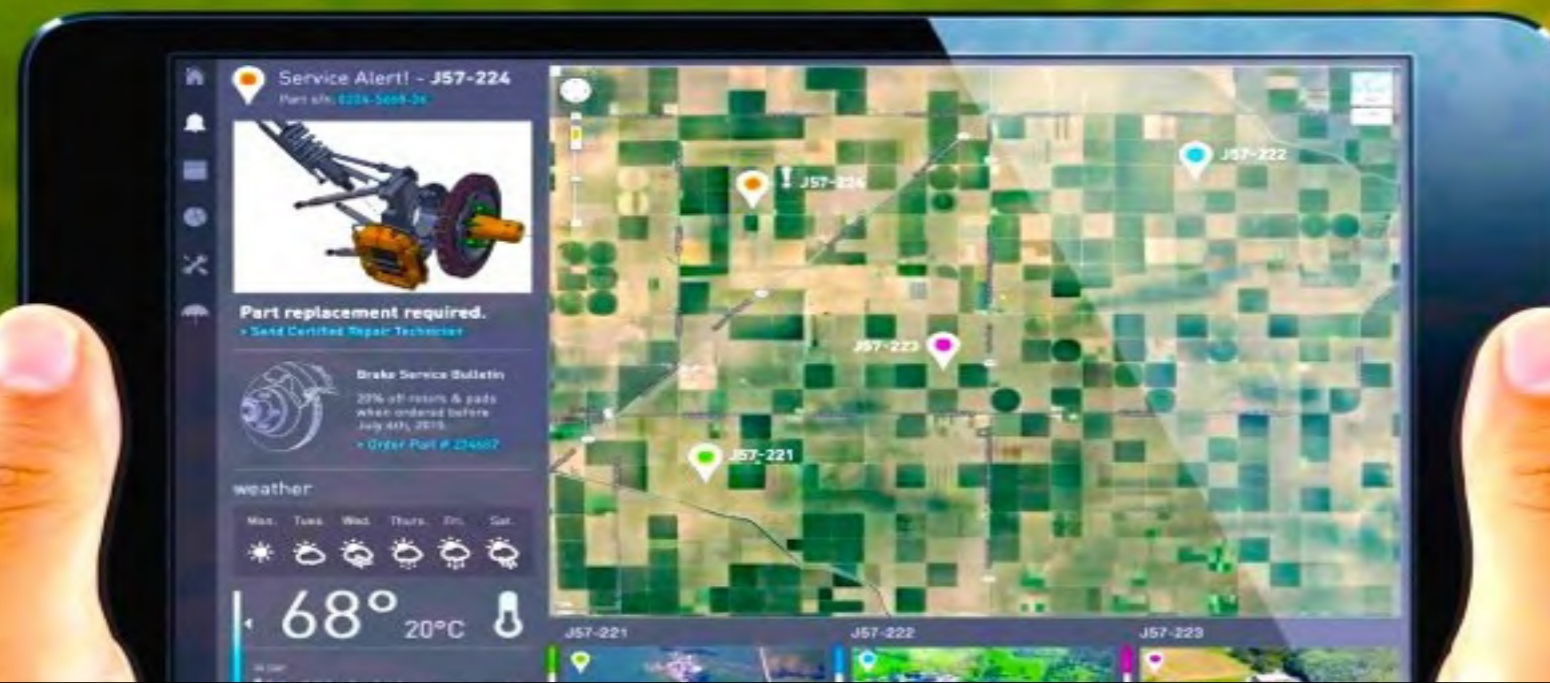

“Today more than 11 billion sensors are attached to natural resources, production lines, the electricity grid, logistics networks and recycling flows, and implanted in homes, offices, stores and vehicles, feeding big data into the Internet of Things. By 2020 at least 50 billion sensors will connect to it. Cisco By 2022, the private sector productivity gains wrought by the Internet of Things will exceed \$14 trillion (Cisco). GE estimates that productivity advances from the Internet of Things could affect half the global economy by 2025.” (Jeremy Rifkin, NYT)

Unilever, Facebook's Internet.org partner to increase Internet in rural India

The partnership will carry out a study to examine opportunities to increase wider adoption in rural communities

Just 15% of the Indian population has access to the Internet. Photo: Hemant Mishra/Mint

Mumbai: Unilever Plc, the Anglo-Dutch parent of India's largest consumer packaged goods company Hindustan Unilever Ltd (HUL), and Internet.org, a Facebook Inc-led alliance, on Monday announced a partnership to reach millions of people across rural India.

Just 15% of the Indian population has access to the Internet and the Internet.org and Unilever partnership will carry out a comprehensive study to examine opportunities to increase wider adoption in rural communities, they said in a statement.

Some 3 Billion consumers / users from the so-called developing world will enter the middle class by 2030

Smart devices are becoming dramatically cheaper, access must follow!

High flyer: A rendering of an uncrewed solar-powered aircraft that Facebook wants to operate at an altitude of 20 km to distribute Internet access to areas below.

According to Facebook CEO Mark Zuckerberg and Google CEO Larry Page, the future of the Internet lies in the upper stratosphere.

Facebook announced today that it has set up a team to work on solar powered aircraft that would circle at a height of 20 kilometers to provide Internet access to suburban areas of the world where connectivity is scarce.

Is Connectivity a Human Right?

For almost ten years, Facebook has been on a mission to make the world more open and connected. Today we connect more than 1.15 billion people each month, but as we started thinking about connecting the next 5 billion, we realized something important: the vast majority of people in the world don't have access to the internet.

Today, only 2.7 billion people are online — a little more than one third of the world. That is growing by less than 9% a year, but that's slow considering how early we are in the internet's development. Even though projections show most people will get smartphones in the next decade, most people still won't have data access because the cost of data remains much more expensive than the price of a smartphone.

Making the internet affordable

Internet.org is a global partnership
dedicated to making affordable

In the meantime, supporting everything and anything that makes Internet access possible is a good idea!

...and give access to airwaves where available

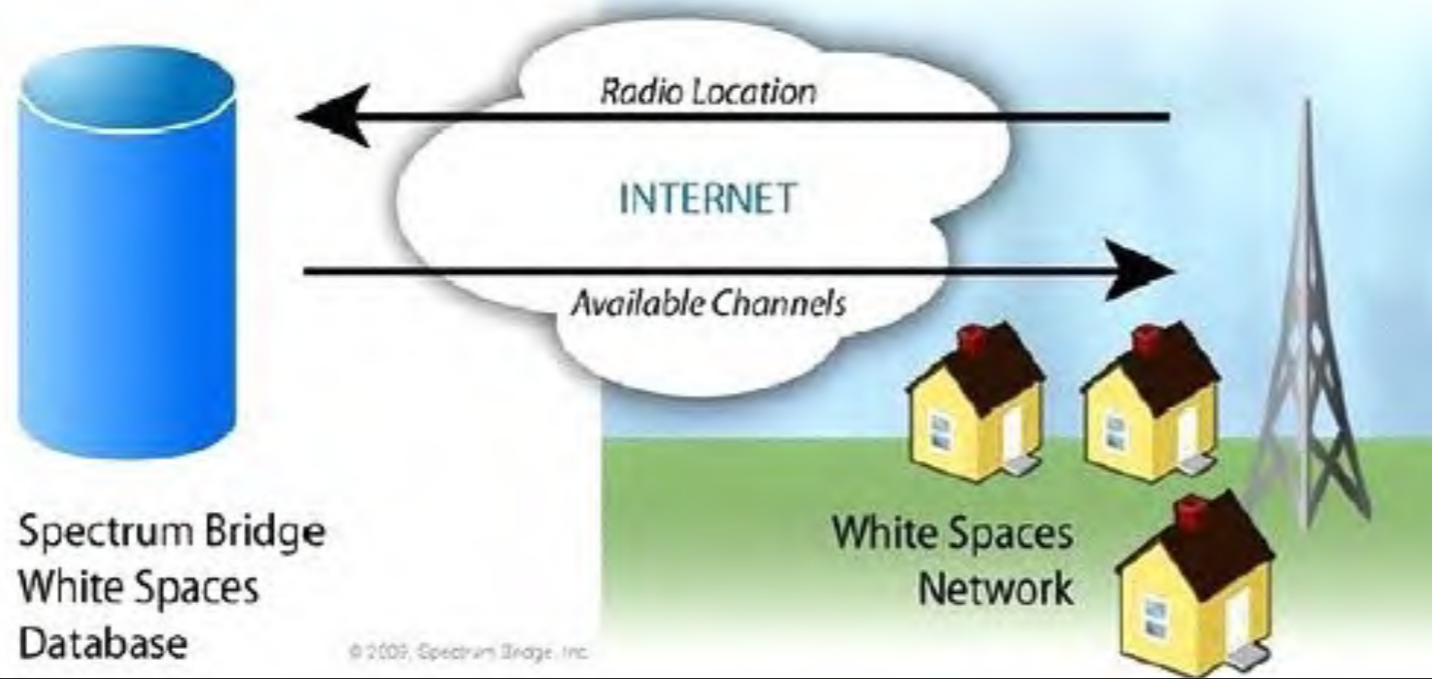

Kenya: Project 'Mawingu' Opening Up More Opportunities in Nanyuki

by Lilian Mutegi, allafrica.com

November 18

Project Mawingu is the first deployment of solar-powered based stations together with TV white spaces, a technology partially developed by Microsoft Research, to deliver high-speed internet access to areas currently lacking even basic electricity.

During a recent visit to the various Mawingu project sites in Nanyuki, the residents of Nanyuki expressed their gratitude as they could now get low-cost, high-speed wireless broadband thus helping them create new opportunities for commerce, education, healthcare and delivery of government services across the Laikipia County where Nanyuki lies.

WhatsApp Shows How Phone Carriers Lost Out on \$33 Billion

Free social-messaging applications like WhatsApp cost phone providers around the world \$32.5 billion in texting fees in 2013, according to research from Ovum Ltd. That figure is projected to reach \$54 billion by 2016. The deal values each of its 450 million active monthly users at \$42.

In less than 2 years

Social Media-Telecom-Broadcasters

Facebook is paying more than double its annual revenue for a chat program that has little revenue. The purchase price is slightly more than the market value of Sony Corp. "Facebook is the leading global social-sharing utility. Now, it has a significant opportunity to be the leading global communications utility," RBC Capital Markets said in a note.
