

Olga van Zijverden works as consultant at TÜV Rheinland and is the project coordinator for the European Broadband Mapping project. The project is aiming at developing an interactive online mapping tool that visualises the Quality of Service of broadband connectivity in all EU and EEA Member States.

Olga graduated in 2014 with a Business and Macroeconomics degree after having studied in Germany, France and Bulgaria. Next, she worked at the research institute RAND Europe in Brussels with a focus on projects in the field of ICT and digital society for the European Commission. She has in-depth knowledge of decision-making structures and procedures (political and administrative) at EU level and in EU Member States. Furthermore she has worked on various communication campaigns, as well as market and policy impact assessments.

In her role as project coordinator she is in charge of bringing together various stakeholder groups within the European Broadband Mapping project, ranging from data suppliers (NRAs and ministries) and academia to standardisation bodies and industry representatives.
