

SESSION 5: ENSURING TRUST AND CONFIDENCE IN DIGITAL CONTENT DELIVERY

Ms. Chaymaly PHAKASOUM

Director of Competition and Service Division

Lao Telecommunication Regulatory Authority

Overview

- To ensure a privacy, trust and cybersecurity system for providing a digital age services are challenging. It requires a facilitate in various factors such as developed infrastructure, network security response system, HRD and legal framework.
- In case, all factors are stable, we could produce many productions for fulfill the dramatically increasing demands of usage. For instance, the e-commerce, financial transactions, digital identity and so on which will move closely to a smart city ideal.
- Laos PDR is under developing the all essential factors to solve the crosscutting challenged issues.

Cybersecurity in Laos

- New technologies and drivers that is important to look after is a new convergence applications such as OTT, IOT, Cloud Computing, and so on.
- Privacy and IPR issue is under a new law and decreed which are already enforced. It is on the way to implement the content of Laws to be effective in practical way.
- National Strategies is highlight the Cybersecurity issue as a top priority for supporting development/growing of social-economic and provide the confidence/ensure facilitate to investors.
- Legal and regulatory framework is completed cybersecurity law, data protection law and various regulations and some drafts are under proceeding.

Cybersecurity in Laos

- Child Online Protection is under studying. We sat up a division which is in charge of Child within our Ministry. It is included into the MPT action plan and there are some activities to support the child online protection such as following up the international information and provide some advice/advertise/promotion/distribution about the advantage and disadvantage of using online information for child via internal workshop and training.
