Business Tax  
Income Tax

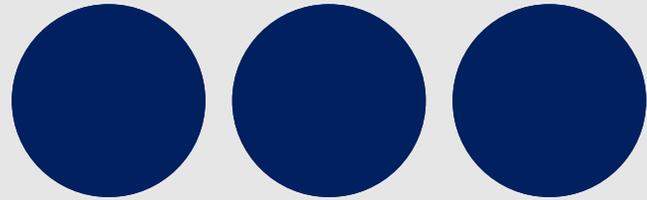

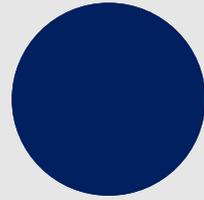

“...331 million in lost tax revenue, and think about that for a second... you can create a program where the first 1100 people that move to Kansas city from Missouri would each get a Ferrari, which they could then drive around in a giant pile of \$30m where the state has set on fire. Then you would actually be fiscally more responsible, because you’d save the area \$20m.”

Magician

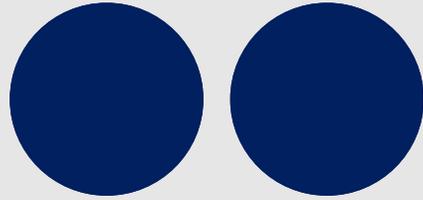

## 3 Questions to Always Ask

What is your **realistic** goal?

- Foreign Direct Investment?
- Job creation?
- Tax revenue?
- Publicity?

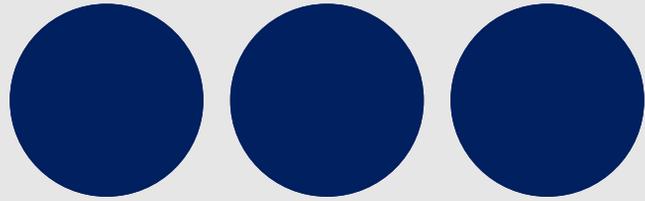

**Rule of thumb:** Be realistic. Don't just sell the dream.

## What are your **hard** metrics?

- Amount of Foreign Direct Investment
- Number of jobs created
- Earning per \$ spent
- Tax revenue collected

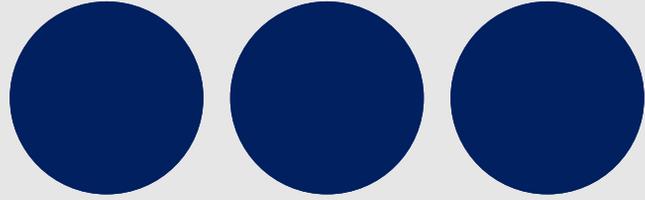

**Rule of thumb:** if it can be disputed, it is not a good metric.

## How do you collect & maintain data?

- Maintain the data continuously throughout the lifetime of the program
- Provide full transparency for accountability
- Make it easily accessible for all to use

**Rule of thumb:** data analytics should be part of the program budget

## 3 Questions to Always Ask

1. What is your **realistic** goal?
2. What are your **hard** metrics?
3. How do you collect **and maintain** data?

It's a journey together

Thank you
