

## BR IFIC 2719 – NEWS

### Release of a new AP30BReport software application

The Radiocommunication Bureau (BR) is pleased to inform administrations that a new “**AP30BReport**” software application (version 1.0.0.14) is available in this BR IFIC. This is a standalone software application, which is incorporated in the GIBC software package V.8.0.0.27 included in this BR IFIC. The **AP30BReport** software application allows users to view and query the databases containing results of technical examinations for AP30B satellite networks carried out with the GIBC/Appendix 30B software application. This version of the **AP30BReport** software application includes the following modules.

- **Annex 3 – PFD:** Report of PFD examination results based on Annex 3 to Appendix **30B**.
- **Service Area Coverage:** Report of administrations whose territories have been partially or totally included in the service area.
- **Annex 4 – C/I:** Report of C/I examination results based on Annex 4 to Appendix **30B**.

The above-mentioned modules will be displayed depending on which type of technical examination has been carried out and included in the databases.

For detailed information on how to use this software application and its various kinds of reports, please refer to the “*AP30BReport.chm*” help file included in this software package.
