

BR IFIC 2754 – NEWS

The Bureau wishes to inform your Administration that the structure of the \Databases\ folder has been revised for Appendices **30**, **30A** and **30B** data. Further details can be found in the \Databases\SpPlans_E.pdf document.

Release of an upgraded version of the AP30BReport software application

The Radiocommunication Bureau (BR) is pleased to inform administrations that an upgraded version of the “**AP30BReport**” software application (version 2.0), incorporated in the GIBC software package V 9.0.0.8, is available on this BR IFIC. The upgraded **AP30BReport** software application includes new features that allow users to visualize points (test points and/or grid points) and diagrams in the GIMS software application from the AP30BReport query results. These new features, accessible by right-click on the screens of the query results, are included in the following reports:

- Annex 3 – PFD at test/grid point level
- C/I values at test and/or grid points (Annex 4 – C/I)
- Reference situation (Annex 4 – C/I)

Please note that the GIMS software application (version 9.0), also available on this BR IFIC, is required to be installed first before the above-mentioned new features can be used.

For detailed information on how to use these new features, please refer to the “*AP30BReport.chm*” help file included in this software package.
