BR IFIC 2812 – NEWS

Release of the updated version of the SPS software package

The Radiocommunication Bureau is pleased to inform administrations that the upgraded version 7.6.0.2 of the SPS software package is available in this BR IFIC.

For examination of an incoming Article 4 network submitted under Appendix **30** in Regions 1 and 3, only the worst power flux-density (PFD) excess per frequency assignment is stored in the "*PFD_Aff*" table of an output Mspace database, instead of all PFD excess. This measure was implemented in order to meet the limitation on the maximum size (2 GB) for a single Ms Access database.

In order to obtain all PFD excess, a check box under the "*Options*" menu should be selected.
