BR IFIC 2883 – NEWS

Release of new version of GIBC software package

The Radiocommunication Bureau (BR) is happy to inform administrations that a new version of the software package for technical examinations under Appendix **30B** is available in this BR IFIC.

The software package consists of a new version of the GIBC AP30B software package (V.XXXX (Ap30B V.3.8.0.5 including AP30BTexCap V.2.0.0.4 and AP30BReport V.3.0.1.1)). The following new functions/improvements have been introduced in this package:

- The C/I analysis program has been improved to prevent memory allocation errors.

- The order in which the C/I analysis program reads additional GIMS databases has been changed to match the behavior of other GIBC/Appendix30B modules (i.e. GIMS diagrams will be searched from the top to the bottom of the list of additional GIMS databases (in GIBC Tools/Options tab)).

- The "Affected Networks Summary" report of the AP30BReport program has been updated to show only other networks affected by the network under examination.
