ITU-T Study Group 13 greets ITU-T Standardization Committee for Vocabulary.

We wish to draw your attention to set of new term and definitions extracted from ITU-T Recommendations in force.

We hope that new term and definitions provided in Appendix I, will be helpful in your deliberations, and we look forward to further collaboration.

Appendix I

List of new term and definitions provided by ITU-T Y.3514 as follows:

dependability: The availability performance and its influencing factors on reliability performance, maintainability performance and maintenance support performance.

[SOURCE: Recommendation ITU-T Y.3514, 3.2.1]

inter-cloud governance: System by which the use of inter-cloud is directed and controlled.

[SOURCE: Recommendation ITU-T Y.3514, 3.2.2]

reliability: The ability of a system, product or component to perform and maintain under stated conditions as required for a specified period of time.

[SOURCE: Recommendation ITU-T Y.3514, 3.2.3]

resiliency: The ability of a system, product or component to provide, maintain, or return to an acceptable level of service in the face of faults (unintentional, intentional or naturally caused) affecting normal operation.

[SOURCE: Recommendation ITU-T Y.3514, 3.2.4]
