Biography

Mr. Na Seung-joo is the chief architecture officer of the Data Center Group at Intel. He is driving innovation in the data center by working with customers in cloud and data analysis based on AI, HPC and network thru innovative technologies such as the Intel[®] Xeon[®] Processor. In 2000, he joined Intel as a server development technology support engineer. Since then, he has been a server architecture manager in Asia Pacific, high performance computing (HPC) and workstation products marketing in Asia Pacific and Japan.
