Stocktaking and Tunis

❖ Tunis Agenda, paragraph 120

❖ *"The sharing of information related to the implementation of WSIS outcomes is an important element of evaluation. We note with appreciation the report on the Stocktaking of WSIS-related activities, which will serve as one of the valuable tools for assisting with the follow-up, beyond the conclusion of the Tunis Phase of the Summit, as well as the "Golden Book" of initiatives launched during the Tunis phase. We encourage all WSIS stakeholders to continue to contribute information on their activities to the public WSIS stocktaking database, maintained by ITU. In this regard, we invite all countries to gather information at the national level with the involvement of all stakeholders, to contribute to the stocktaking."*
