Broadband competition:
Penetration, speed and price

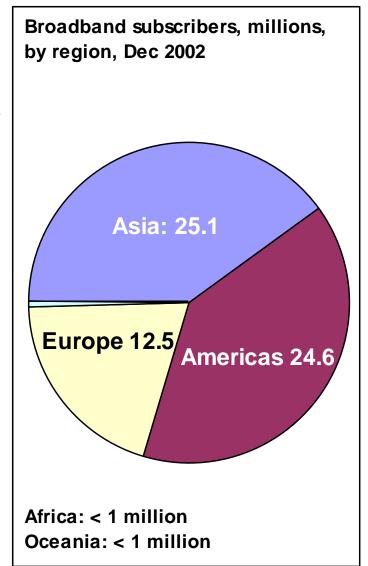

Taylor Reynolds

ITU Strategy and Policy Unit 26 September 2003

Broadband facts

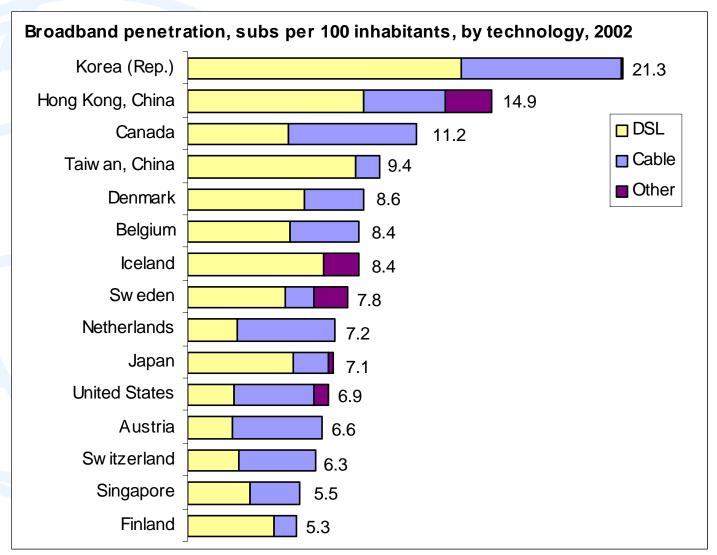

- 63 million subscribers worldwide (1% of the world) in over 80 countries (31 Dec 2002)
- 94% of subscribers are in high-income economies
- Speeds vary from 0.256 Mbit/s to 100 Mbit/s
- Nearly 60% of broadband is delivered over telephone networks, 40% over cable

Leading broadband economies

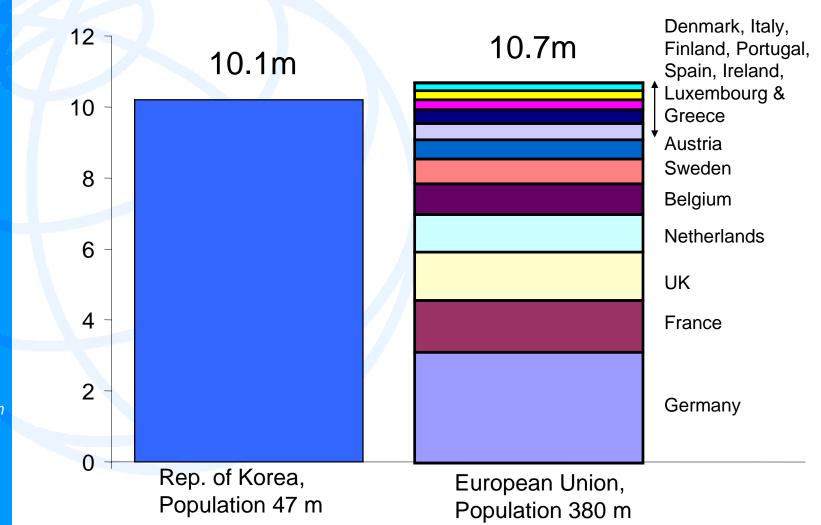

International Telecommunication Union

Just how far ahead is Korea?

Broadband subscribers, end 2002

Downloading DVD video

- Time needed to download a DVD over each Internet connection (4 gigabyte file)
 - > Japan: ADSL (26 Mbit/s) 20 minutes
 - > Korea: VDSL (20 Mbit/s) 26 minutes
 - > ITU: Leased line (12 Mbit/s) 44 minutes
 - ➤ Belgium: ADSL (3 Mbit/s) 3 hours
 - ➤ Denmark: ADSL (2 Mbit/s) 4.5 hours
 - ➤ USA: Cable modem (1.5 Mbit/s) 6 hours
 - > CH: ADSL (0.756 Mbit/s) 12 hours
 - ➤ Dial-up (0.056 Mbit/s) 7.5 days

Broadband prices

Cost of 100 kbit/s as % of monthly income Korea (Rep.) 1 0.03% Belgium **1** 0.06% Hong Kong, China 1 0.06% But factoring in Singapore \rightarrow 0.12% the speed of the United States 0.13% connection and Canada = 0.17% income is the Netherlands **0.17%** Macao, China **0.21%** more telling story Germany **0.23% 0.24%** Norw ay 0.30% Israel Austria **0.30%** 0.34% New Zealand Slovenia 0.36% Italy **0.39%** United Kingdom 0.43% Luxemboura 0.48% Sw eden 0.55% Australia 0.55% France 0.60% Ireland 0.61% **Portugal** 0.62% Sw itzerland 0.80% 0.86% Cyprus **Iceland 0.88%** Lithuania 1.14% Malta 1.36% Jordan 1.42% Denmark **1.55%**

Asian competition

"Broadband in Korea and Japan is the world's fastest as well as the world's least expensive"

Korea

- ➤ Competitive ADSL provider (Hanaro) provides *true* facilities-based competition to the incumbent (KT). Cable and wireless providers also have a strong presence and wide coverage in the market.
- > Same-day ADSL hookup

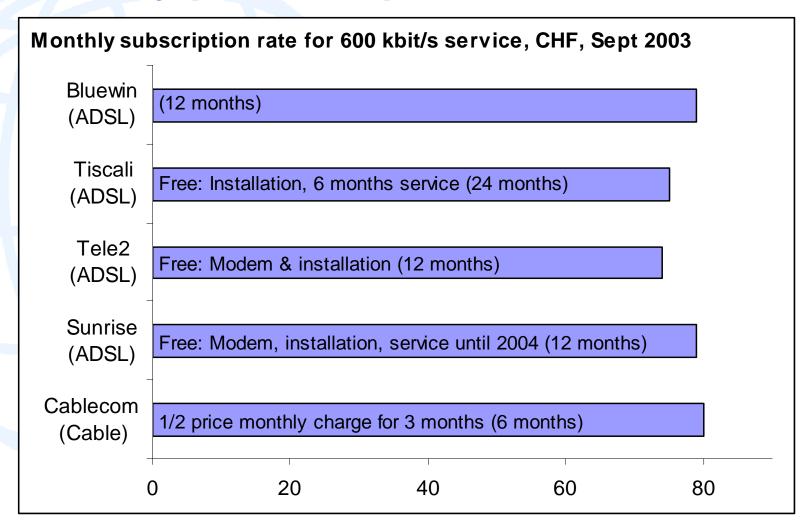

Japan

- > Lowest loop access charges in the world
 - Copper phone networks (US\$ 1.40)
 - Fibre to the home (US\$ 43.33)
- > 47 ADSL providers in June 2002

Switzerland: Competition, but not on monthly price or speed

9

Why some economies succeed with broadband

- Competition
 - ➤ There is no substitute for true market competition to expand networks and lower prices
- Government involvement
 - ➤ Economies where the government is actively involved in broadband promotion have higher penetration rates
- Integration of broadband applications in society
 - Korea has 25,000 cybercafés (open 24 hours) despite having the highest home broadband penetration in the world

European challenges & opportunities

- ISDN
 - Operators have been and are still unwilling to actively push lucrative ISDN customers to ADSL
- Lack of effective competition in the market
 - Weak inter-modal or same-service competition. Competitive players often too weak to compete with the incumbent
- Cross ownership issues
 - > Forced divestitures have spurred growth
- Government policies
 - EU and national policies are making broadband a priority
- Consumer awareness
 - Europeans are becoming more aware of broadband's benefits through increased marketing and awareness programs

Thank you
