CDMA2000: Delivering on 3G

Charter

To lead the rapid evolution and deployment of CDMA-based systems, based on open standards and encompassing all core architectures, to meet the needs of markets around the world in an emerging, information-intensive environment
Membership

The CDG is a consortium of 100 member companies from around the world. Members are involved in many aspects of CDMA system deployment and support.

CDG Members

- Agilent Technologies, Inc.
- Alcatel, Inc.
- Alvarion Inc.
- Alarcel Corp.
- Altel Communications, Inc.
- Alpine Electronics, Inc.
- Angola Telecom
- Anritsu
- AnyDATA Corporation
- ArryCom, Inc.
- Asia Pacific Broadband Wireless
- Audionet Communications Corporation
- Avanet
- Bell Mobility
- BellSouth International
- Bermuda Wireless, Inc.
- Bermuda Digital Communications Limited
- Bittfone Corporation
- Celente, Inc.

- Western Wireless
- Willtel
- Wireless Test Systems
- ZTE Corporation
CDMA is the present and future of advanced wireless services

Code Division Multiple Access (CDMA) is a spread spectrum technology used in second and third generation wireless networks.

cdmaOne™ identifies 2G and 2.5G cellular, PCS and wireless local loop (WLL) services based on the IS-95A and IS-95B CDMA air interface standards. IS-95A supports data delivery up to 14.4 kbps while IS-95B offers up to 115 kbps.

CDMA2000 is an ITU-approved, IMT-2000 (3G) standard.
CDMA2000 1X can double voice capacity and delivers data rates up to 307 kbps.
CDMA2000 1xEV is optimized for high-speed data:
- CDMA2000 1xEV-DO uses a designated channel for data at speeds of up to 2.4 Mbps in a single carrier.
- CDMA2000 1xEV-DV integrates voice and data on a single channel with speeds of up to 4.8 Mbps.
CDMA Benefits

As the most advanced digital technology, CDMA offers significant benefits to operators and their subscribers.

**Operators**
- Greater voice capacity
- Simplified system planning through the use of the same frequency in every sector
- Improved coverage characteristics resulting in fewer cell sites
- Data ready; uses standard IP commands and protocols
- The platform for 3G

**Subscribers**
- Improved voice quality
- Longer talk time
- Enhanced privacy and security
- Advanced data services

The dominant 3G standards are based on CDMA.
CDMA is the fastest growing technology serving more than 164 million subscribers.

Source: CDMA Development Group, June 2003

CDMA has presence across all continents.

- North America: 69 million subscribers, dominant technology.
- Asia Pacific: 63 million subscribers, deployed in China and India, over 50% of subscribers use 3G.
- Caribbean and Latin America: 30 million subscribers, 20% market share, the only 3G technology available.
- Europe, Middle East and Africa: 2.6 million subscribers, the first 3G technology launched in.

As of June 2003.
CDMA will continue to be the fastest growing technology platform

- CDMA subscribers base will double between 2003 and 2007 to reach nearly 450 million
- CDMA market share will grow from 15% in 2003 to 20% by 2007

Source: EMC, June 2003
CDMA2000 1X networks (first deployed October 2000)

CDMA2000 1x -EV -DO commercial networks (first deployed January 2002)

- CDMA2000 was the first 3G technology deployed commercially (October 2000)
- 67 operators selected CDMA2000
- 12 operators have introduced or are migrating to CDMA2000 1xEV-DO

There are more than 54 million CDMA2000 subscribers

- CDMA2000 holds nearly 99% of the 3G market share
- More than 30% of CDMA subscribers use 3G
- Nearly 4 million subscribers join every month

Source: CDMA Development Group
CDMA2000 will continue to expand rapidly and dominate the 3G market throughout the decade.

CDMA2000 key success factors:

- Enables rapid time-to-market
  - Commercial since October 2000 and widely deployed worldwide
  - Can be deployed rapidly
  - Does not require new spectrum

- Offers the most economical and flexible management of spectrum
  - Requires only 1.25 MHz of spectrum and can be deployed in any frequency designated for wireless services

- Increases network capacity for voice and data traffic
- Offers cost-effective migration from existing systems
  - Viable solution for any existing technology
  - Minimizes capex and opex by leveraging investments in core networks and operating systems

- Delivers high data rates and supports advanced applications
- Offers the broadest range of devices at affordable prices
CDMA2000 affords flexible management of spectrum

Because CDMA2000 requires only 1.25 MHz of spectrum, it allows an operator to introduce 3G data services gradually while preserving most of the spectrum to service voice customers.

CDMA2000 can be deployed in any existing and new spectrum allocated for wireless services

*Limited by Regulations*
CDMA2000 delivers maximum voice capacity in available spectrum (5 MHz bandwidth)

- CDMA2000 (multi-carrier pooling)
- CDMA2000 (conservative)
- UMTS
- GSM

Gains assume 100% of users using latest technology. Actual gains would depend on handset penetration. Assumes 100% loading of voice traffic. Assumes 2% blocking.

CDMA2000 offers a direct path to 3G for any existing technology

- cdmaOne
  - 14.4 kbps Circuit
  - TDMA
  - 9.6 kbps Circuit

- CDMA2000 1X
  - 153.6 kbps Packet
  - 1xEV-DV Packet
  - 2.4 Mbps Packet
  - 1xEV-DO (with enhancements)

- ANSI-41

- 1xEV-DO
  - 3.1 Mbps Packet
  - 1xEV-DO
  - 3.1 Mbps Packet
  - 1xEV-DO
  - 3 Mbps Packet
  - 1xEV-DO
  - 3 Mbps Packet

- GPRS
  - 53.6 kbps Packet
  - WCDMA
  - 384 kbps – 2 Mbps Packet
  - EDGE
  - 150 kbps Packet
  - HSDPA
  - 10 Mbps Packet

- MAP

- 2G technologies
- 3G technologies

* Represents peak data rates
CDMA2000 is a natural evolution path for cdmaOne operators...

**CDMA2000 ADVANTAGE**
- Preserves existing AMPS and ANSI-41 network
- Handsets backwards compatible with cdmaOne system

... and requires relatively small capital investment

Moody estimates that cdmaOne carriers could upgrade to CDMA2000 1X for $3 to $5 per POP.

Source: Morgan Stanley, June 2002; Yankee Group, July 2003; Moody; operator reports
**TDMA/AMPS to CDMA2000:**
One step evolution to 3G

- AMPS to CDMA2000 1X
- New Equipment with 1X Channel Card
- New Equipment with BTS
- CDMA2000 ADVANTAGE
  - Preserves existing AMPS and ANSI-41 network
  - Now new spectrum required
  - Handsets backwards compatible with cdmaOne system

* Usually co-located with AMPS equipment, requires separate interface protocols

**CDMA2000 delivers a broad range of applications to the end user...**

- Entertainment
- Sports
- Multiplayer Gaming
- News
- Ring Tones
- Position Location
- Push To Talk
- MMS
- Email
- Video Monitoring
...and greater revenue to operators

With CDMA2000 operators, data ARPU increases by 62% to contribute 11.6% of total ARPU.

CDMA2000 subscribers generate 5 times more data ARPU and 57% more in total ARPU than 2G subscribers.

CDMA2000 allows operators to offer richer content (beyond SMS) that drives data usage.

Source: KTF, December 2002

More than 400 CDMA2000 terminals are available in the market today...

- Color displays and cameras
- Streaming Video
- Real-Time VOV/AOD
- Voice Recognition
- GPS

Wireless Content: 58%
...and CDMA2000 volume advantage drives the prices down

- CDMA2000 is already coming down the cost curve due to volume shipments today and in the future.
- CDMA2000 economies of scale are leveraged from cdmaOne.
- Rapid manufacturing transition to CDMA2000 will result from:
  - Pin compatibility
  - Leverages common design and components with cdmaOne.

Source: Gartner Group, January 2003

CDMA2000 – Operators’ Perspectives

“CDMA2000 is designed to build a simple and cost-effective network evolution… the first phase of CDMA2000, known as 1X, is already in commercial operation, offering double the voice capacity of second-generation (2G) networks.”

SEC Filing S1-A 11/28/01 – “Our CDMA network positions us to meet the growing voice and data needs of our customers… Upon full deployment of our 1XRTT network and 1XRTT handsets, we expect that this technology will effectively double our network’s voice capacity compared to the current version of CDMA.”

William Esrey, Chairman – “Essentially, we’re spending zero additional dollars to convert our network to 3G.”
CDMA2000 – Analysts’ perspectives

“The power of the platform is unlike anything the wireless industry has ever seen. The handset is no longer a simple device for voice communications as it is throughout most of the world, but is a multimedia platform in the truest sense of the word.” - ABN AMRO

“…only CDMA 1X comes with affordable and attractive handsets and applications, matched with half the capex per pop of W-CDMA.” - Morgan Stanley
