

Abstract

IMT-2000

The development of mobile telecommunications takes an explosive character nowadays. This development expresses not only in broadening of coverage and growth of user base, but also in permanent extension of the circle of services. The introduction of new technologies allows to meet the growing demands of those users who perceive the mobile terminal not as the mean of voice communication only, but as the multifunctional device which can be used for wide circle of purposes.

The worldwide introduction of the IMT-2000 systems, as well as the IMT-Advanced technologies for its replacement, is the means which will allow mobile operators to meet the requirements of growing market demands.
