Abstract
Paolo Rosa
Session 2.4 on BSG

Some of the factors affecting the standardization gap are the participation in the ITU-T studies, the access to Standards, the availabilty of web based tools for remote participation in meetings, the creation of capacity building opportunities, the participation and contribution in ITU-T management activities from the Study Groups up to the World Assembly in order to give voice in the basic instruments of the Union.
This presentation will show how many aspects have been already covered by the ITU-T to reply to the requests from developing countries, the relavant WTSA-08 Resolutions and the activities put in place by the ITU-T with specific reference to key WTSA Resolutions addressing aspects as membership, universities, events, electronic tools and others
