Background

• For the last 25 years, ITU has been coordinating the development of a global broadband multimedia international mobile telecommunication system, known as IMT.

• Since 2000, the world has seen the introduction of the first family of standards derived from the IMT concept - IMT-2000. There are now more than a billion IMT-2000 (3G) subscribers.

• “IMT-Advanced” provides a global platform on which to build the next generations of mobile services - fast data access, unified messaging and broadband multimedia - in the form of exciting new interactive services.
What is IMT-Advanced?

IMT-Advanced systems are mobile systems that include new capabilities that go beyond those of IMT-2000. They will:

- provide access to a wide range of telecommunication services including advanced mobile services, supported by mobile and fixed networks, which are increasingly packet-based;
- support low to high mobility applications and a wide range of data rates in accordance with user and service demands in multiple user environments;
- provide for high quality multimedia applications within a wide range of services and platforms, providing a significant improvement in performance and quality of service.

Key features

- a high degree of commonality of functionality worldwide while retaining the flexibility to support a wide range of services and applications in a cost efficient manner;
- compatibility of services within IMT and with fixed networks;
- capability of interworking with other radio access systems;
- high quality mobile services;
- user equipment suitable for worldwide use;
- user-friendly applications, services and equipment;
- worldwide roaming capability; and,
- enhanced peak data rates to support advanced services and applications (100 Mbit/s for high and 1 Gbit/s for low mobility were established as targets for research)*.

Yogyakarta, Indonesia, 27-29 July 2009
Resolution ITU-R 57

- ITU-R has commenced the process of developing ITU-R Recommendations for the terrestrial components of the IMT-Advanced radio interface(s). This work is guided by Resolution ITU-R 57, which was approved by the Radiocommunication Assembly in 2007.

- Resolution ITU-R 57 on the “Principles for the process of development of IMT-Advanced” outlines the essential criteria and principles which will be used in the process of developing the Recommendations and Reports for IMT-Advanced, including Recommendation(s) for the radio interface specification.
The IMT-Advanced Process

Setting the stage for the future:

### Circular Letter 5/LCCE/2 and addenda

- The purpose of this Circular Letter is to invite the submission of proposals for candidate radio interface technologies (RITs) or a set of RITs (SRITs) for the terrestrial components of IMT–Advanced.

- This Circular Letter also initiates an ongoing process to evaluate the candidate RITs or SRITs for IMT–Advanced, and invites the formation of independent evaluation groups and the subsequent submission of evaluation reports on these candidate RITs or SRITs.
### Evaluation Groups

- ARIB Evaluation Group
- ATIS WTSC
- Canadian Evaluation Group (CEG)
- Chinese Evaluation Group (ChEG)
- ETSI
- Israeli Evaluation Group (IEG)
- TCOE India
- TR-45
- TTA PG707
- UADE, Instituto de Tecnologia (Argentina)
- Wireless Communications Association International (WCAI)
- WINNER+

Invitation for proposals and evaluation groups

- The purpose of this Circular Letter is to invite the submission of proposals for candidate radio interface technologies (RITs) or a set of RITs (SRITs) for the terrestrial components of IMT-Advanced.

- This Circular Letter also initiates an ongoing process to evaluate the candidate RITs or SRITs for IMT-Advanced, and invites the formation of independent evaluation groups and the subsequent submission of evaluation reports on these candidate RITs or SRITs.

DOCUMENT IMT-ADV/1
Background on IMT-Advanced

- This document provides summary and background information on IMT-Advanced.

- International Mobile Telecommunications-Advanced (IMT-Advanced) systems are mobile systems that include the new capabilities of IMT that go beyond those of IMT-2000. Such systems provide access to a wide range of telecommunication services including advanced mobile services, supported by mobile and fixed networks, which are increasingly packet-based.

- IMT-Advanced systems support low to high mobility applications and a wide range of data rates in accordance with user and service demands in multiple user environments. IMT-Advanced also has capabilities for high quality multimedia applications within a wide range of services and platforms, providing a significant improvement in performance and quality of service.

Yogyakarta, Indonesia, 27-29 July 2009
DOCUMENT IMT-ADV/2 Rev 1
Submission and evaluation process and consensus building

- This document describes the process and activities identified for the development of the IMT-Advanced terrestrial components radio interface Recommendations:

1 Time schedule
- The time schedule described below applies to the first invitation for candidate RITs or SRITs. Subsequent time schedules will be decided according to the submissions of proposals.
- Submission of proposals may begin at any time subsequent to the release of Circular Letter 5/LCCE/2, dated 7 March 2008. The final deadline for submissions is 16:00 hours UTC, 7 calendar days prior to the start of the 6th meeting of Working Party 5D (WP 5D) in the latter part of 2009. The evaluation of the proposed radio interface technologies by the evaluation groups and the consensus-building process will be performed throughout this time period and thereafter. The detailed schedule can be found in Figure A2-1.

FIGURE A2-1
Schedule for the development of IMT-Advanced radio interface Recommendations

Steps in radio interface development process:
- Step 1: Issuance of the circular letter
- Step 2: Development of candidate RITs and SRITs
- Step 3: Submission/Reception of the RIT and SRIT proposals and acknowledgement of receipt
- Step 4: Evaluation of candidate RITs and SRITs by evaluation groups
- Step 5: Review and coordination of outside evaluation activities
- Step 6: Review to assess compliance with minimum requirements
- Step 7: Consideration of evaluation results, consensus building and decision
- Step 8: Development of radio interface Recommendation(s)

Critical milestones in radio interface development process:
- (0): Issue an invitation to propose RITs March 2008
- (1): ITU proposed cut off for submission of candidate RIT and SRIT proposals October 2009
- (2): Cut off for evaluation report to ITU June 2010
- (3): WP 5D decides framework and key characteristics of IMT-Advanced RITs and SRITs October 2010
- (4): WP 5D completes development of radio interface specification Recommendations February 2011
This Report supports the process for IMT-Advanced initiated by Circular Letter 5/LCCE/2 and its Addenda. It addresses the requirements, evaluation criteria, as well as submission templates required for a complete submission of candidate radio interface technologies (RITs) and candidate sets of radio interface technologies (SRITs) for IMT-Advanced.

It provides:

1) The service, spectrum and technical performance requirements for candidate RITs/SRITs for IMT-Advanced.
2) Evaluation guidelines including evaluation criteria and procedures to evaluate technology submissions for IMT-Advanced.
3) Submission templates that proponents must utilize to organize the information that is required in a submission of a candidate technology for evaluation. Proponents must provide the required information.

Requirements related to technical performance for IMT-Advanced radio interface(s)

- This Report describes requirements related to technical performance for IMT-Advanced candidate radio interfaces. These requirements were used in the development of Report ITU-R M.2135 – “Guidelines for evaluation of radio interface technologies for IMT-Advanced”.
- It also provides the necessary background information about the individual requirements and the justification for the items and values chosen. This information is needed for a broader understanding of the requirements.
- It is based on the ongoing development activities from external research and technology organizations.

**Report ITU-R M.2135**

Guidelines for evaluation of radio interface technologies for IMT-Advanced

- This Report provides guidelines for both the procedure and the criteria (technical, spectrum and service) to be used in evaluating the proposed IMT-Advanced radio interface technologies (RITs) or Sets of RITs (SRITs) for a number of test environments and deployment scenarios for evaluation. These test environments are chosen to simulate closely the more stringent radio operating environments. The evaluation procedure is designed in such a way that the overall performance of the candidate RITs or SRITs may be fairly and equally assessed on a technical basis. It ensures that the overall IMT-Advanced objectives are met.
- It provides, for proponents, developers of candidate RITs or SRITs and evaluation groups, the common methodology and evaluation configurations to evaluate the proposed candidate RITs or SRITs and system aspects impacting the radio performance.
- It allows a degree of freedom so as to encompass new technologies. The actual selection of the candidate RITs or SRITs for IMT-Advanced is outside the scope of this Report.
- The candidate RITs or SRITs will be assessed based on these evaluation guidelines. If necessary, additional evaluation methodologies may be developed by each independent evaluation group to complement the evaluation guidelines. Any such additional methodology should be shared between evaluation groups and sent to the Radiocommunication Bureau as information in the consideration of the evaluation results by ITU-R and for posting under additional information relevant to the evaluation group section of the ITU-R IMT-Advanced web page (http://www.itu.int/ITU-R/go/rsg5-imt-advanced).
