ITU-D Regional Development Forums 2010 on NGN and Broadband for Arab Region (Cairo, Egypt, 13 to 15 December 2010)

Broadband Policy and Regulation- Case study from Emerging Market

Satya N. Gupta Chief Regulatory Advisor BTGS- India and SAARC

Introduction

Broadband-Broad Definition

- Generally, Broadband describes high speed, high capacity data communication making use of DSL, Cable Modem, Ethernet, Fixed Wireless Access, Optical Fiber, W-LAN, V-SAT etc.
- There is no specific international definition for the Broadband though there is a common understanding among developing countries that it should be better than ISDN.
- As per Broadband Policy 2004, Broadband in India was defined as:
 - 'Always-On' data connection that is able to support various interactive services including Internet access having the capacity of a minimum download speed of 256 Kbps to an individual subscriber form the Point of Presence of the service provider.

(This definition has already started showing up its limitations and is under Regulatory review for upward revision)

Key internet and broadban	d indicator	S			
End of year 2003 Parameters	Korea	Malaysia	China	India	India Dec. 1
Internet connections per 100 persons	26	12	2.5	0.4	2.5
Broadband connections per 100 persons	25	0.4	1.4	0.02	1.0
Ratio of Broadband to Internet Connections	0.96	0.33	0.56	0.05	0.4
Ratio of Internet connection to PCs	0.3	0.8	0.9	0.5	0.8
Charges per 256 kbps (\$ per month)	0.60	20	7.5	40	6
GDP (US\$ Per capita) month (US\$)	10,000	4,000	965	465	1,000

Targets for Internet & Broadband Penetration (Broadband Policy 2004)

Year Ending	Internet Subscribers (in million)	Broadband Subscribers (in million)	
2005	6.0	3.0	
2007	18.0	9.0	
2010	40.0	20.0	
Dec. 2010 (Actual)	30.0	11.0	

Roadblocks for Broadband

1. Price

- Price for broadband access @ Rs. 300 (USD 6) per month – still unaffordable to masses

2. Access to the customer

- Lack of access to the incumbent's copper loop for DSL by competitors
- Low quality of cable TV infrastructure and lack of industry organization
- High costs for DTH and VSAT access
- Spectrum related hurdles preventing wireless solutions from spreading
- Cumbersome processes for Right Of Way (ROW)

3. Cost of connectivity

- Lack of effective competition in the "within city"/ last mile access networks
- High costs of international bandwidth
- Ineffective implementation of National Internet Exchange of India (NIXI)
- Absence of National Broadband Backbone

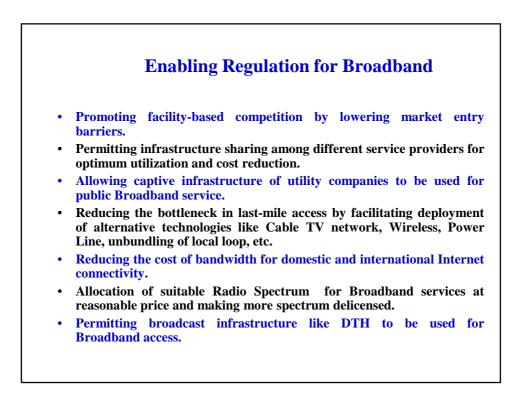

4. Fiscal policies

- High taxes and duties, and lack of fiscal incentives for faster Broadband growth

- 5. Content and applications
 - Lack of locally relevant content and absence of "change agent" to drive growth

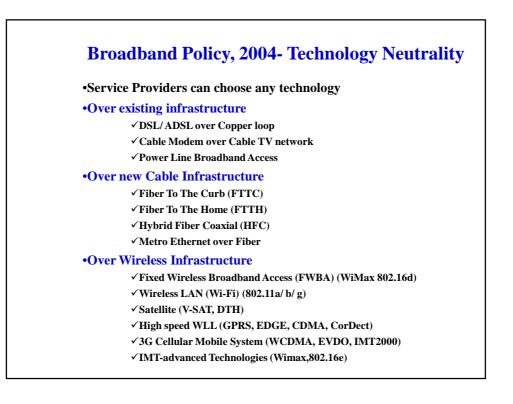

Govt's Role in Promoting Broadband

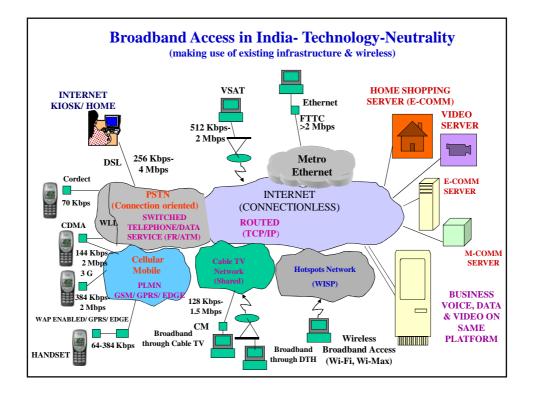

- Creating the right policy environment by removing entry barriers.
- Creating National Broadband Backbone infrastructure with open access.
- Establishing Internet Exchange in the country.
- Permitting Unlimited Competition for Broadband.
- Encouraging International players to setup Gateways in the country.
- Funding community investment in Broadband in uneconomic remote rural areas.
- Leveraging Govt's own demand and setting example by being on-line leader.
- Extending special tax concessions for equipments & access devices used for Broadband.

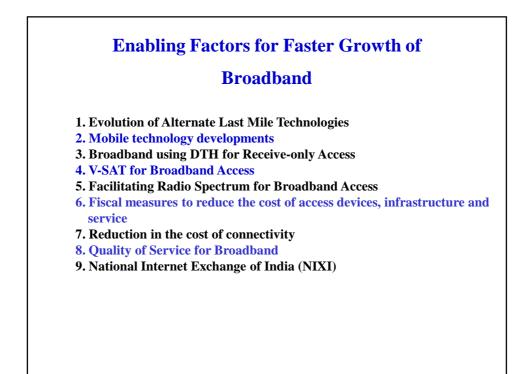

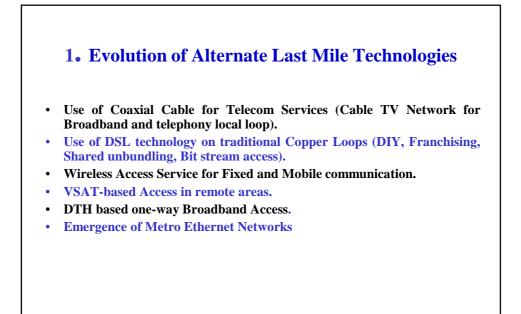

India-Liberalized Licensing and Regulation for Broadband Services ≻The most liberal licensing regime for ISPs. >Unlimited competition (>100 ISPs operational, 388 Licenses signed). ≻Low entry fee. >No license (revenue share) fee except 6% for Internet Telephony. >No obligation towards Universal Service Fund (USF). >Permitted to have own international gateway through sub-marine optical fiber cable or satellite. **>FDI** limit (74% as is for the telecom sector). >Permitted to make use of BSO's Dialup Network, Cable TV's Network, own Copper, Fiber, Radio for last-mile connectivity. >2.4 Ghz and 5.7 Ghz band de-licensed for indoor as well as outdoor usage for broadband access. >High speed WLL permitted for BSOs. >A liberal V-SAT licensing policy (upto 2Mbps). >Permission to use DTH setup for Receive-Only Internet.

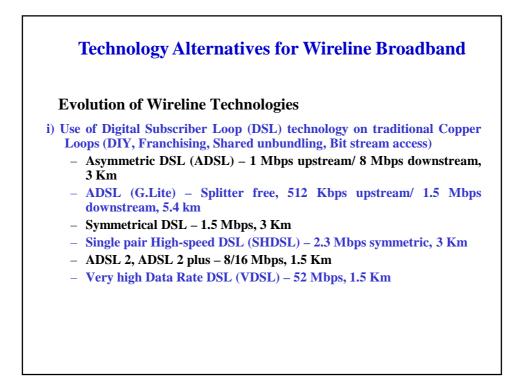

>3G and BWA spectrum allocated through e-auction.

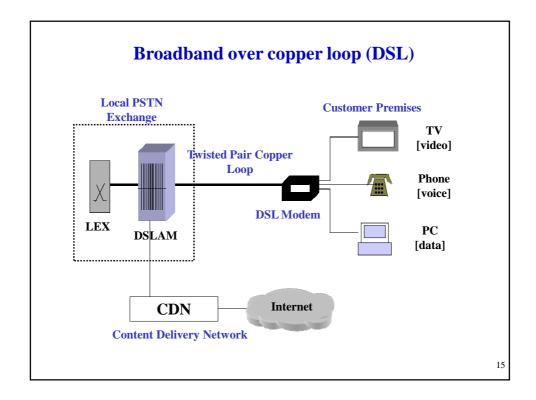

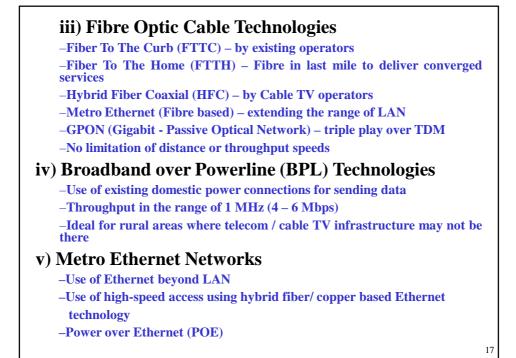

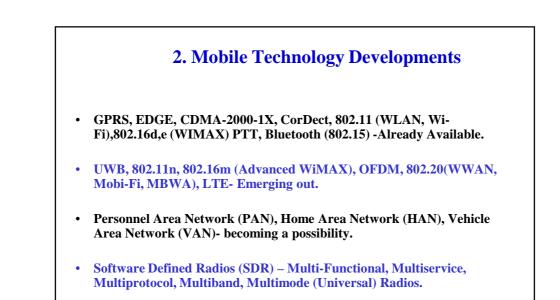

ii) Cable TV Network-Playing a significant role in broadband Access - Broadband over cable TV accounts for 74% of total connections in US, and 55% in Canada 90 million cable homes in India, but infrastructure can not support bidirectional communication and requires upgrade Regulatory environment, via an ISP license, allows this with some MSO's and operators already doing so - For progress, better organization of the industry needed - Cable operators need to adopt innovative business models to compete. - Possible to provide upgraded entertainment services such as interactive digital TV, pay-per-view, video on demand and time-shifted TV · Benefits operators with significantly higher ARPU and better customer retention To start with Cable TV network which is uni-directional can be used for downloading, the uplink to be conventional narrow band like dialup/ ISDN/ RADIO Operators need training to create awareness about utility of their networks and understanding of the investments required, returns possible, and technical aspects 16

• Cognitive Radio – Capable of working on idle spectrum, white spaces, guard bands.

Technology	Max Throughput	Frequency Bands	Typical Range	Application
WiFi (802.11x)	54 Mbps/ 11 Mbps	2.4 G, 5.1 G	100-400 mtrs	WLAN, HAN
WiMax (802.16x)	70 Mbps	700 MHz, 2.3 G, 2.5 G, 3.5 G, 5 G	Up to 50 Kms	WWAN
Mobi-Fi (802.20)`	40 Mbps	2.4, 3.5, 5.5 G	8-10 Kms	Mobile Broadband
CorDect	70 Kbps	1900 MHz	10-15 Kms	WWAN
WCDMA/ 3G	2.0 Mbps	1900-2100 MHz	Unlimited (Cellular)	Mobile Broadband
EV-DO,HSPDA	2.4 Mbps (shared)	450,,900,1800 MHz	Unlimited (Cellular)	Mobile Broadband
EDGE	230 Kbps	900,1800 MHz	Unlimited (Cellular)	Mobile Internet
GPRS	58 Kbps	900,1800 MHz	Unlimited (Cellular)	Mobile Internet
CDMA (2000-1X)	144 Kbps (shared)	450,,900,1800 MHz	Unlimited (Cellular)	Mobile Internet
FSO	100 Mbps to few Gbps	Light Wave	Few Kms	CAN
Microwave radio (MMDS/ LMDS)	Few Mbps	3.5 G – 31 G	50 Kms +	MAN
VSAT	20 Mbps	4 G – 11 G	Unlimited	GAN (Remote Area)
Wireless USB 2.0	480 Mbps	2.4 G	10 mtrs	PAN, HAN
Bluetooth(802.15.1	3 Mbps	2.4 G	1-10 mtrs	PAN, HAN
Infrared	16 Mbps	Light Wave	1-5 meter	PAN, HAN,

	WCDMA (3G)	HSDPA (3G+)	EVDO (3G)	802.16 a/d	802.16e	IMT Advanced
Bandwidth	5 MHz	5 MHz	1.25 MHz	1.25-20 MHz	1.25-20	1.25-5 MHz
Typical Spectrum	1.9-2.1 GHz	1.9-2.1 GHz	450-1900 MHz	2.3-5.8 GHz	2.3-3.8 GHz	Various
Downlink Peak Rate	0.4 bps/Hz	2.9 bps/Hz	2.5 bps/Hz	3.2 bps/Hz	3.2 bps/Hz	2.4-3.6 bps/Hz
Uplink Peak Rate	0.4 bps/Hz	0.4 bps/Hz	1.4 bps/Hz	2.4 bps/Hz	2.4 bps/Hz	1.2 bps/Hz
Ave DL Thr put	0.1 bps/Hz	0.7 bps/Hz	0.9 bps/Hz	0.53 bps/Hz	0.75 bps/Hz	0.78 bps/Hz
Ave UL Thr put	0.1 bps/Hz	0.1 bps/Hz	0.32 bps/Hz	NA	NA	0.35 bps/Hz
Flat IP Support	No	No	No	Yes	Yes	Yes
Mobility	Full	Full	Full	Fixed	Limited	Full

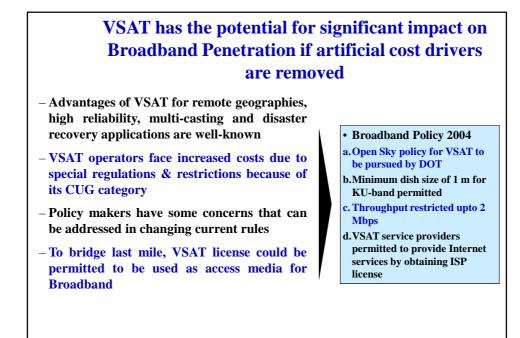

3. Satellite based DTH Services offer alternate for the Broadband via Receive Only Internet Service (ROIS)

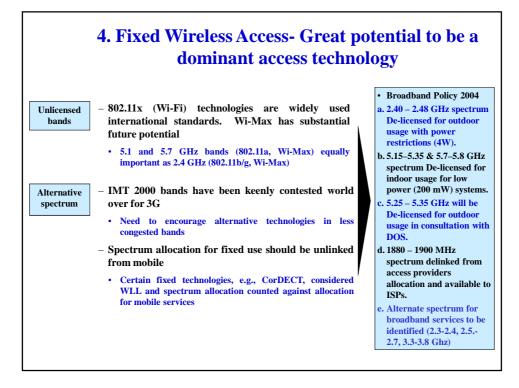

- Deployment of DTH for TV has begun, but internet access through this was not permitted
- While internet data is downloaded from the satellite, the uplink connection to the ISP is through another channel
- Since DTH (or receive-only VSAT) dish is only receiving, should not require SACFA clearance or NOCC fee for uplink monitoring
- New technology permits DTH to be used for bidirectional internet access, though costs are high because of required hardware

- b.ISP licenses permitted to allow customers for downloading data through DTH
- c.DTH providers permitted to provide both way Internet service after obtaining VSAT and ISP license

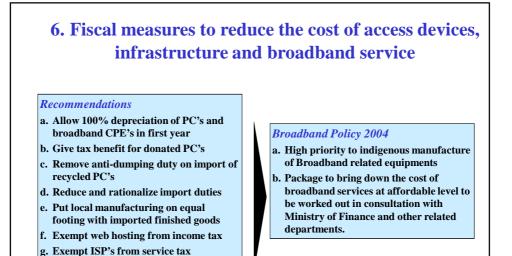

5. Facilitating Radio Spectrum for Broadband

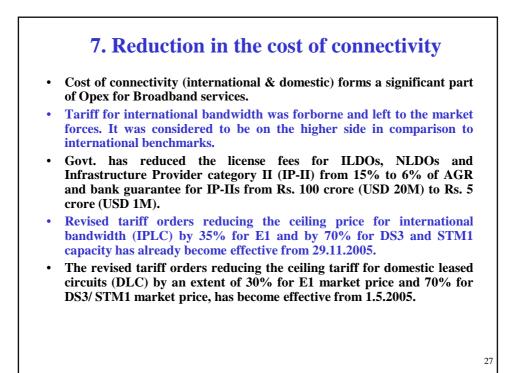

Access

- ISM Spectrum (2.4 to 2.48 GHz, Wi-Fi) de-licensed for in-campus WLAN using any technology.
- De-licensing of this for outdoor usage has also been notified with 4W EIRP.
- De-licensing of 5.1 to 5.3 and 5.7 to 5.8 GHz spectrum for indoor & in-campus usage has been notified.
- Earmarking of 20 MHz (1880 to 1900 MHz) for wireless TDD access systems by ISPs (delinking from WLL).
- Time-bound frequency allocation, site clearance & frequency licenses through automation of Spectrum Management System and by setting predetermined standards for WPC.(E-application for SACFA clearance).
- E-Auction of 3G spectrum in 2.1 GHz and BWA spectrum in 2.3 to 2.4 Ghz band has been completed and spectrum allocated.

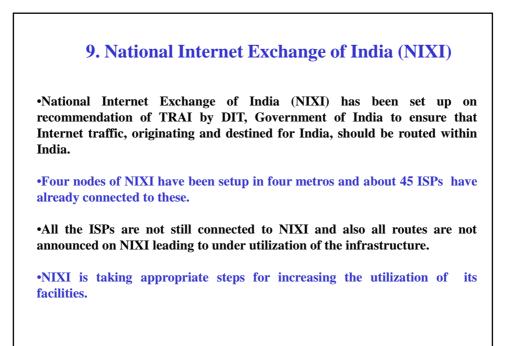

h. Personal broadband allowance

Emerging Broadband Services
High speed Internet access (death of World-Wide-Wait) – Still the killer application for Broadband in India
Video-On Demand, Interactive TV, IPTV, PPV, Time Shifted TV, Videoconferencing (Multimedia over Broadband)
Triple Play (data, voice, video) – By UASP
IP-VPN (low cost connectivity) – By UASP/NLDO
VOIP (permitted only for UASPs)
Interactive Gaming (future killer application)
4 e's (e-Governance, e-Learning, e-Health, e-Commerce)

Roadmap - Current Plans for Broadband

•ISPs are teaming up with Cable TV operators to provide Broadband to the homes using HFC technologies and also making use of unlicensed radio links for high speed last mile access.

• New entrants in Basic Service are using advanced technologies like 'Fiber to the Curb', High Speed WLL, DSL etc. to enable Broadband access in the last mile. Some of the service providers have started offering PC alongwith the Broadband connection under rental / installment schemes.

• Incumbent operators BSNL & MTNL which have a subscriber base of around 35 million over copper loop are appointing franchisees to offer broadband services by offering existing copper network and co-location facilities to the third parties on mutually agreed revenue share basis. Aim to provide 5.0 million connections by FY 2010 and a total of 10 million Broadband connections by 2012 They have also launched limited download broadband services @ Rs. 250 per month throughout the country in addition to bundling of PC with Broadband connection at an affordable EMI and also free Broadband upgrade for their internet customers.

• Public places like Airports, Railway stations, modern business centers, star hotels, cyber cafes, Malls have started having deployment of Hot Spots (Wi-Fi) in unlicensed 2.4 GHz band .

•Wi-Max deployment in 2.3 to 2.4 GHz band are being done by many service providers. Some metropolitans are in the process of becoming "warm zones" by using WI-Fi.

Conclusions

- 1. The regulator (TRAI) has made landmark recommendation to the govt. on National Broadband Plan for the country at an estimated investment of USD 12.5B, which will form the basis of revision of Broadband Policy 2004.
- 2. Alternate access technologies specially wireless access to play significant role for Broadband penetration in India, breaking the natural monopoly of copper local loop.
- 3. Cable TV network offers great potential for contributing towards Broadband access.

Conclusion (Contd...) 4. Wireless based technologies specially WLL, Wi-Fi, Wi-Max, V-SAT, DTH etc. are enabling cost effective and faster broadband deployment & will pick up as 3G and BWA spectrum has been allocated through E-Auction. 5. Markets to offer innovative applications and leverage cost-effective technologies to make Broadband attractive and affordable. In India one of the main hindrance to Broadband deployment has 6. been the cost to consumer which has been of the order of US\$ 10 per month against the telephony ARPU of US\$ 5 per month and Internet ARPU of US\$ 4 per month. Now with broadband offerings @ below USD 6 per month, it should pick up and real growth is expected when the availability spreads throughout the country.
