Overview and Progress in Implementing Next Generation Networks

NGN represents a major transition in the approach to providing both basic voice and enhanced communications services of all types. This presentation will highlight NGN concepts and summarize the current ITU work including definitions, functional entities, network structures, business and service benefits and transition paths from existing networks.

We are hearing much about NGN, 3G, all-IP networks, etc. What is the current reality? This presentation provides a series of examples of progress in various parts of the world in deploying the new technologies and taking advantage of the cost savings and service opportunities they bring with them.
