

# NGN Deployment Strategy toward Bridging Digital Divide

*Yuji Inoue*

**Chief Technology Officer**  
**Nippon Telegraph and Telephone Corporation**

# Experiences in Japan / NTT

# Present Situation in NTT

3

*March 2006*

<b>FTTH</b>	<b>265 k</b>	<b>3.4 M</b>
-------------	--------------	--------------

<b>ADSL</b>	<b>-22 k</b>	<b>5.7 M</b>
-------------	--------------	--------------

<b>3 G</b>	<b>1,448 k</b>	<b>22.0 M</b>
------------	----------------	---------------

<b>2 G</b>	<b>-963 k</b>	<b>28.6 M</b>
------------	---------------	---------------

# Rapid Shift to VoIP

# Why FTTH & VoIP – Price -

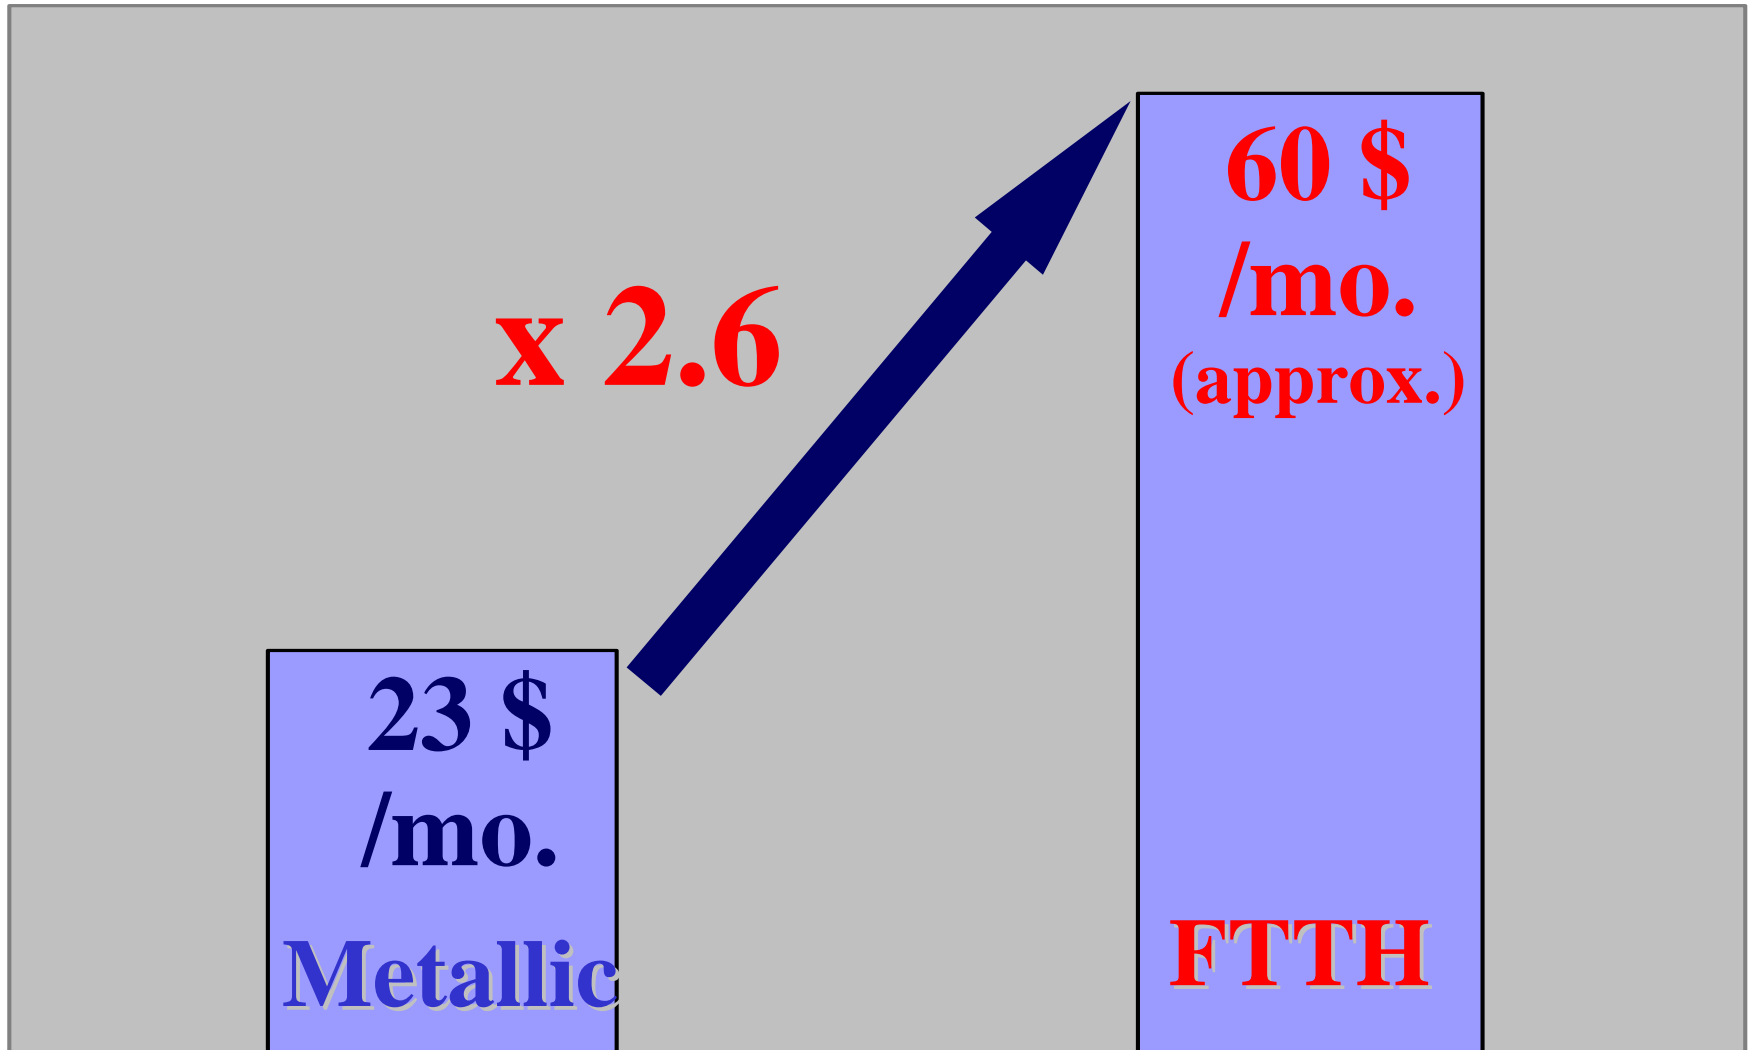

5

	<b>Max. Speed Down/Up (Mbps)</b>	<b>Monthly Charge (US\$)</b>
<b>ADSL</b>	<b>47 / 5</b>	<b>22.3</b>
<b>FTTH</b>	<b>100 / 100</b>	<b>22.1</b>

# Why FTTH & VoIP – ARPU -

6

# Demand for NGN in Japan

7

## 1. Social Demand

- i) Shift to Broadband & Service Convergence*
- ii) New infrastructure toward “Aged Society”*
- iii) Digital opportunity everywhere from Digital Divide*

## 2. Internal Demand

- i) Life time of existing digital switch*
- ii) More competitive in ever-changing business environment*

***Solutions ONLY by NGN***

# Implementation

**1. Build a next-generation network that is**  
*open, flexible, easy-to-use, inter-*  
*operable, and safe&secure*

**=> 30 million FTTH users by 2010**

**2. Strengthen our competitiveness and financial base (Targets up to 2010)**

**- Annual additional sales: 5 billion US\$**

**- Total capital expenditure: 50 billion US\$**

**- Annual cost reduction: 8 billion US\$**

# NTT's NGN Architecture

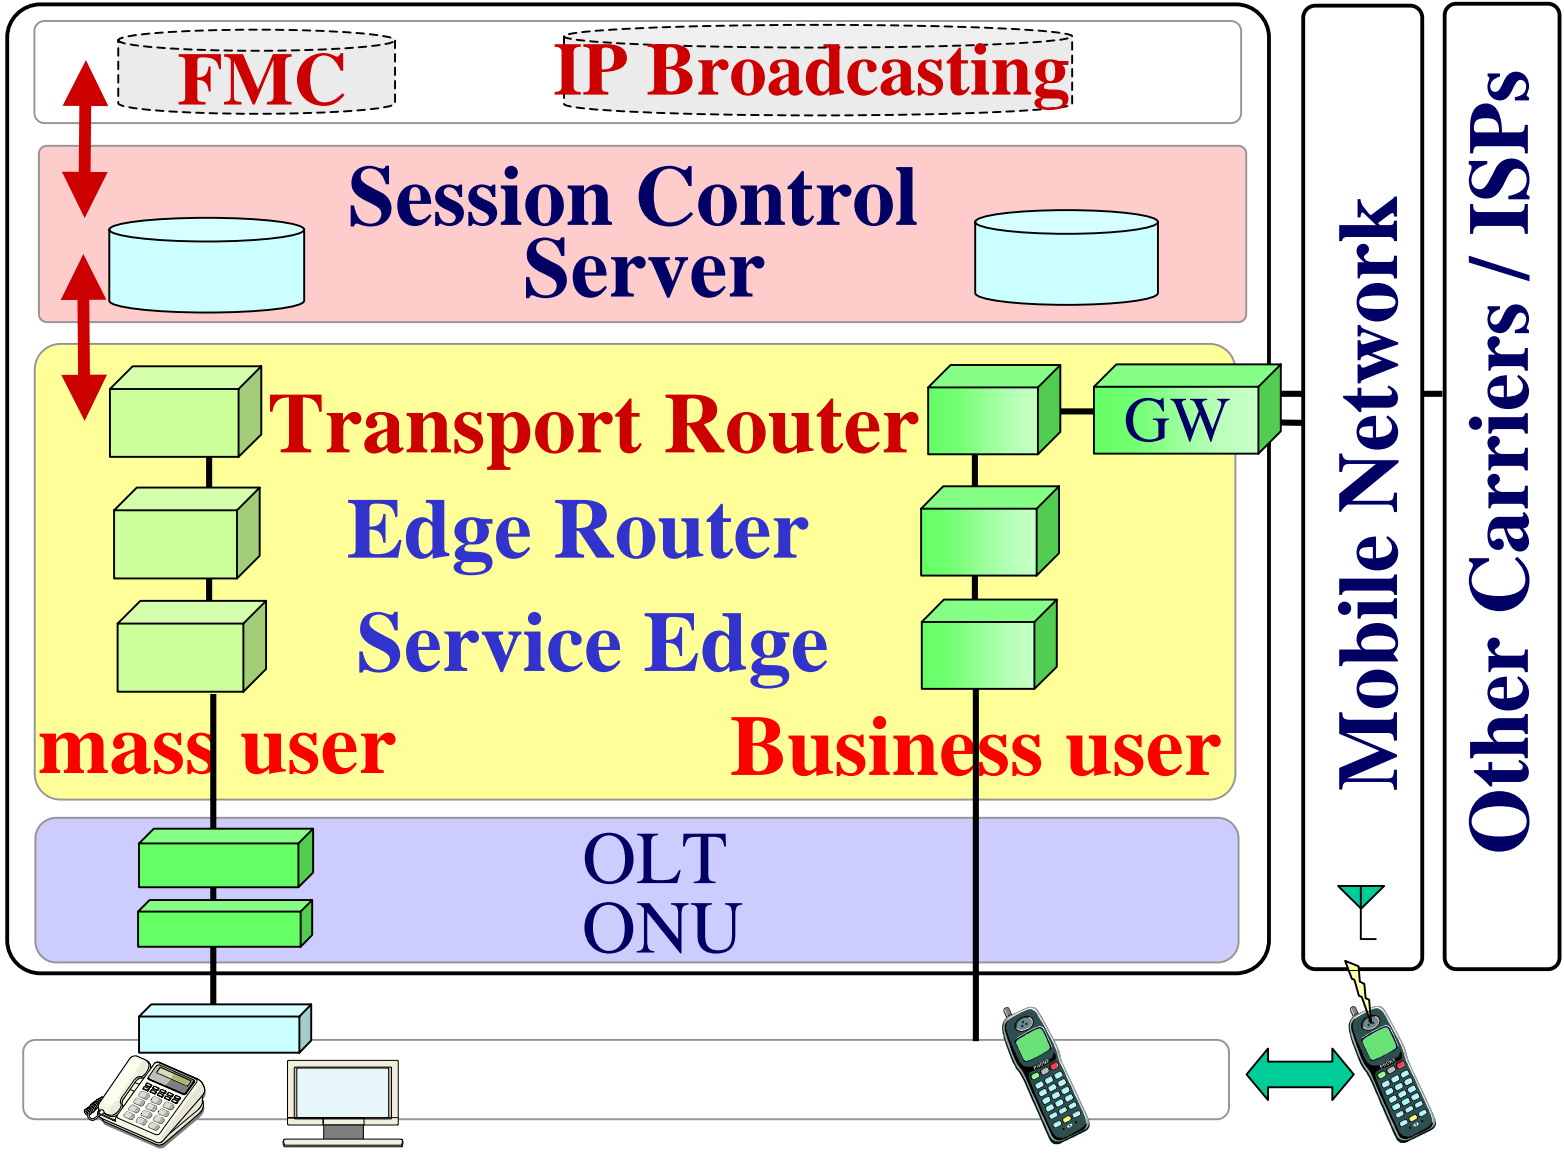

**Applications**

**Service Control**

**Core Network**

**Access Network**

**HGW**

# NGN as Global Infrastructure

# Deployment Strategy of IBMW

# Rough Estimation: Deployment Cost

Ratio of cost per user to provide 1-10Mbit/s access in urban area:

	If provided independently		If deployed as NGN
<b>Internet</b>	<b>20</b>	<b>100</b>	<b>80</b>
<b>Mobile</b>	<b>40</b>		
<b>Wireless</b>	<b>40</b>		

## 1. “Mbit/s” access for the rural area

- *Deployment cost issues: Geographical problems, population density, ...*
- *Optical lines in rural area is still proceeding*

## 2. Accessibility for all generations

- *Reliable, secure, safe, and easy to use, for all generations including aged people*

*<= Solutions by technology:*

- *Zero configuration / zero maintenance*
- *Security functions in Network*

# Access Service in Rural Area

## Example: Optical Fiber + Wireless Access

Extension of area coverage to 10km ?

### WIPAS:

- 1km coverage
- 26GHz band
- 80Mbit/s radio transmission rate
- 46Mbit/s max transfer rate

### B-Flets (FWA Type)

- 20 US\$ /month

# Digital Divide in Global

## 1. Causal relationship is complicated

- *Regional factor: population density, geographical conditions,*
- *Social factor: difference of income, generation, and ICT literacy, etc.*

## 2. What should we do?

- *Problem statement, definition*
- *Priority: What to solve at first?*

*I am a candidate for the Director of  
ITU-T*

**Challenge in a Changing Era, NGN**

*Thank you  
very much*

*Yuji Inoue*
