City in the happiest  
country in the World

# TAMPERE

## a city for people, driven by data & AI

Tampere has been an **active smart city developer** since the late '90s.

Throughout these decades, our whole city has served as a **thriving living lab** and testbed for smart city innovation. This has supported the adoption of new solutions in close collaboration with local businesses, R&D partners, and end-users who are actively engaged in the process as co-creators.

Our systematic and strategic approach to smart city development has increased our understanding of the possibilities of new technologies. It has helped build up **valuable co-operation networks** and contributed to Tampere's reputation as a desired development partner.

We have understood that the **city must play a key role in digital transformation**. We must ensure that it serves residents and businesses alike, advances equality, and promotes ecological and social sustainability in the digital era.

Today, we **embrace the next generation of smart city development activities**. We harness data and AI as tools that help us improve the way we provide our urban services – tools that help us understand our residents' life events and better target our services to them when they are needed – tools to become a more human-centered society.

# TAMPERE METAVERSE

- Metaverse is the next phase of smart city development in Tampere
- A core element for **building a smart and sustainable future** for both residents and businesses alike.
- Building on the of **five flagships of transformation.**
- Learning by doing from each other and with each other locally and globally.

# Our Flagships of Transformation

# The Metaverse

(Public, Private, Personal, Centralized, Decentralized ...)

## Human Digital Twins

(Different perspectives and personas)

## Object Digital Twins

(Public, Industrial, personal, mobile, fixed assets)

## Cognitive City Brain

## Cognitive Digital Thread Engine

## Smart Applications Engine

## Intelligent Sensing Networks

(Raw data, contextualized data and knowledge)

## Common Technology Infrastructure

(Dynamically updated and augmented)

## Legal & Ethics Framework Engine

(Data protection, ethics ...)

## Public Infrastructure

(Under and over ground)

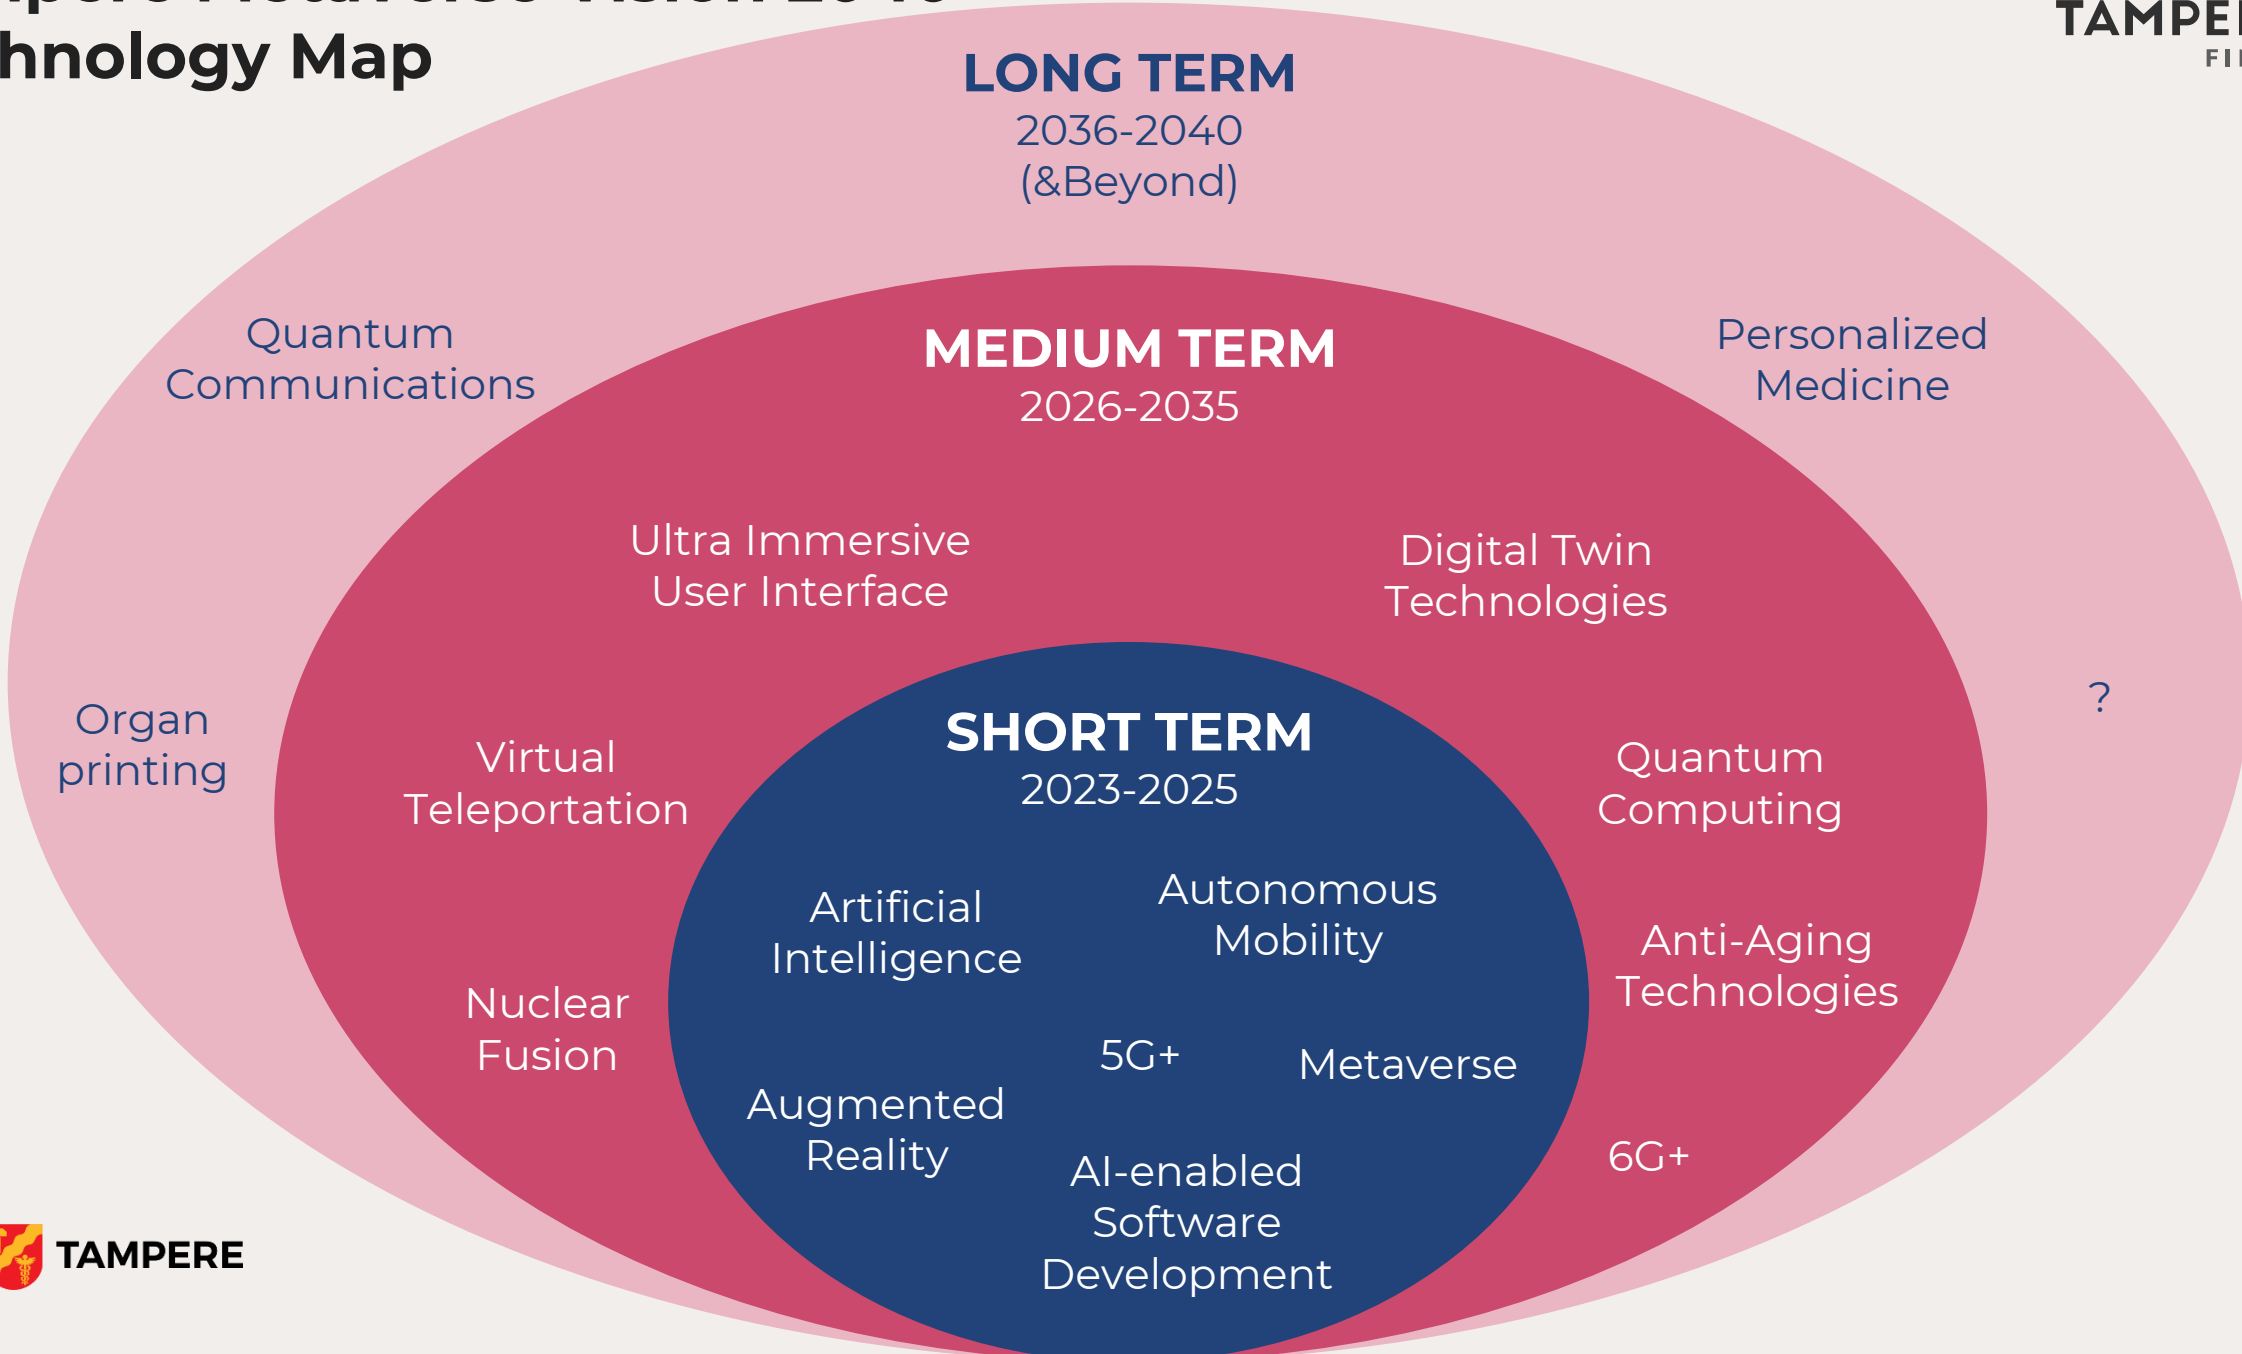

## Smart Business Applications

## Residents Smart Applications

## City Management Smart Applications

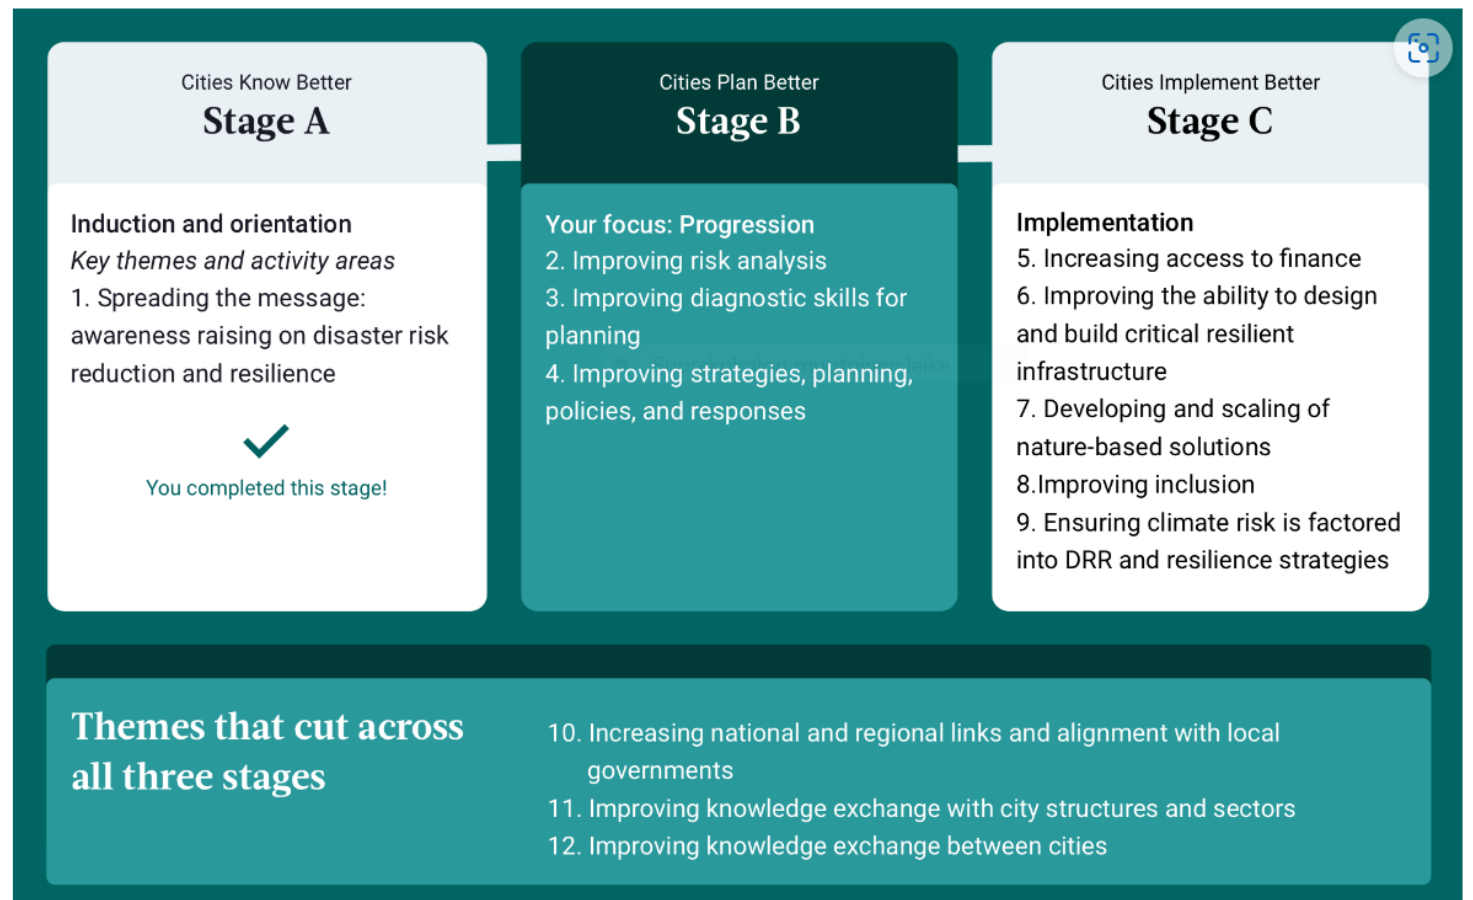

# Cognitive City

# Tampere Metaverse Vision 2040 Technology Map

# Managing recovery in cities from stage A to B in Tampere

## Your next steps toward protecting your city

# Recovery and resilience in Metaverse

- Digital twins enable disaster events tracking and management of the situation
- Real time XR helps emergency teams operate in the event
- Use of drones and autonomous vehicles and devices will be based on existing models
- Using generative AI will help in developing on time responses
- Simulation models can be built for different scenarios using ubiquitous data from different sensors and in the future ontime real data also from crowdsourcing

Thank you
