Subject: Connectivity Planning Platform (CPP) Access

Dear Sir/Madam,

I am pleased to inform you that at the Global Symposium for Regulators 2026 (GSR-26), hosted by the Government of Türkiye, we launched the Connectivity Planning Platform (CPP).

Developed in cooperation with Ericsson, a Member of the Development Sector, as part of the International Telecommunication Union (ITU)'s efforts to advance inclusive national connectivity planning, the Connectivity Planning Platform is a data-driven tool designed to support governments and regulators with evidence-based decision-making through integrated data, dynamic modelling, and actionable insights for broadband and last-mile connectivity planning. This tool is now ready for deployment and use.

Access to the Platform requires prior registration, which can be requested via the following link:

[Connectivity planning platform](#)

The Connectivity Planning Platform is the result of extensive participation and engagement by a wide range of stakeholders who made contributions throughout its development. Feedback and recommendations received during this process have been duly incorporated.

I extend my sincere appreciation to all those who contributed to making the CPP a reality, thereby ensuring that end-users can fully benefit from it to accelerate the deployment of resilient, inclusive, and financially viable connectivity solutions for all.

Please contact my team at cppsupport@itu.int, if you need support.

Yours faithfully,

(signed)

Cosmas Luckyson Zavazava
Director
