

SHIV K. BAKHSHI, PH.D.

Shiv K. Bakhshi, Ph.D., is a Vice President, Industry Relations in Group Function Technology at Ericsson. He is charged with the responsibility of technology and spectrum policy for Africa and the Middle East, and works closely with industry and policy leaders in those regions.

Dr. Bakhshi has long believed that ICT and mobile broadband can play a salient role in economic development and can help unleash the digital vitalities of the peoples in emerging economies. The use of ICT and mobile broadband for economic development, and for bridging the Digital Divide, remain the defining interests of his work as a political economist.

Earlier, as an industry analyst, Dr. Bakhshi headed the worldwide mobile network and device programs for a leading research and advisory firm for several years. A frequent speaker at industry, academic and policy conferences, he has presented on a broad range of technology and policy topics pertaining to the structural transformation of the mobile industry and its changing impact on society.

At Ericsson, as member of the company's CTO organization, he is focused on future spectrum issues that are subject of the World Radio Conference, as well as on ITU-D Study Group questions pertaining to broadband deployment and rural coverage that are subject of the World Telecommunication Development Conference.

Dr. Bakhshi started his career as a journalist in India. Later, as an academic, he taught international telecom policy and strategy, and directed graduate and doctoral research, at the University of Kentucky.

A political economist by training, he has a bachelor's in Economics from Calcutta University. He earned his master's as well as his doctorate in Communication from The Ohio State University.

He is based in the United States, and can be reached at shiv.bakhshi@ericsson.com.
