Annex

Titles and summaries of the draft Recommendations

Draft revision of Recommendation ITU-R SA.1161-1

Doc. [7/59](#)

Sharing and coordination criteria for data dissemination and direct data readout systems in the earth exploration-satellite and meteorological-satellite services using satellites in geostationary orbit

The present revision of Recommendation ITU-R SA.1161 simplifies the current provisions by proposing a single sharing criteria per frequency band, consistent with associated revision of Recommendation ITU-R SA.1160.

Draft revision of Recommendation ITU-R RS.1260-1

Doc. [7/61](#)

Feasibility of sharing between active spaceborne sensors and other services in the range 420-470 MHz

This recommendation is revised to take into account the fact that one space object tracking radar listed in Table 2 of Annex 1 is not active anymore. The associated changes to the exclusion zone map in Figure 1 of Annex 1 has also been updated. Furthermore a *considering* referring to a WRC-2000 Resolution has been suppressed, given the suppression of that Resolution. Also an outdated reference to a UN Conference in 1992 has been suppressed.
