# ASMG Initial Positions to WRC-15 Agenda Items (Science Issues 1.11, 1.12, 1.13, 1.14)

As of 18<sup>th</sup> Meeting, Dubai, UAE: 21-23 May 2014

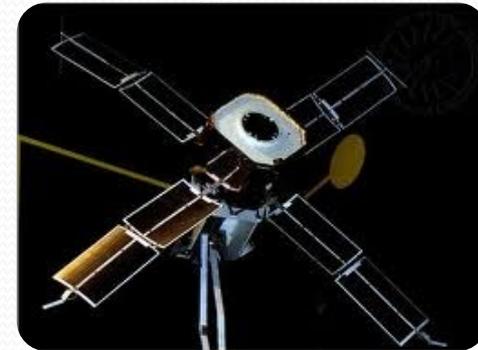

# Agenda Item 1.11

- **“to consider a primary allocation for the Earth exploration-satellite service (Earth-to-space) in the 7-8 GHz range, in accordance with Resolution 650 (WRC-12)”**
- ITU-R Responsible Group: WP 7B
- ASMG Position:
  - Some administrations support the primary allocation for EESS (Earth-to-space) with a new provision, because the studies shows that Fixed services are protected and current PFD limits are sufficient for protection.
  - Other administrations support No Change, which means Not supporting a primary allocation for the Earth exploration-satellite service (Earth-to-space) in the 7-8 GHz range in order to protect the existing services because of heavy use of terrestrial fixed services in this band.

## Agenda Item 1.12

- **“to consider an extension of the current worldwide allocation to the Earth exploration-satellite (active) service in the frequency band 9 300-9 900 MHz by up to 600 MHz within the frequency bands 8 700-9 300 MHz and/or 9 900-10 500 MHz, in accordance with Resolution 651 (WRC-12)”**
- **ITU-R Responsible Group: WP 7C**
- **ASMG Position:**
  - Not supporting an extension of the current worldwide allocation to the Earth Exploration-Satellite Service (active) because of heavy use of terrestrial fixed services.
  - Adding the NOC method to the CPM text.
  - Method A2 is proposed if an extension of the current worldwide allocation to the Earth exploration-satellite (active) service will be considered in the next conference.

## Agenda Item 1.13

- **“to review No. 5.268 with a view to examining the possibility for increasing the 5 km distance limitation and allowing space research service (space-to-space) use for proximity operations by space vehicles communicating with an orbiting manned space vehicle, in accordance with Resolution 652 (WRC-12)”**
- **ITU-R Responsible Group:** WP 7B
- **ASMG Position:**
  - Support mitigating or removal of the 5 Km distance limitation (increase the distance), with maintaining the current PFD limits in 5.268 to ensure the protection of operational terrestrial stations in the fixed and mobile services

# Agenda Item 1.14

- **“to consider the feasibility of achieving a continuous reference time-scale, whether by the modification of coordinated universal time (UTC) or some other method, and take appropriate action, in accordance with Resolution 653 (WRC-12)”**
- **ITU-R Responsible Group: WP 7A**
- **ASMG Position:**
  - Follow up current studies.
  - Invite the concerned entities in each country to provide their advice on the change on the UTC and the resulted consequences on this change.

thank you!
