

RESOLUTION 507 (REV.WRC-19)

**Establishment of agreements and associated plans for
the broadcasting-satellite service¹**

The World Radiocommunication Conference (Sharm el-Sheikh, 2019),

considering

- a)* that it is important to make the best possible use of the geostationary-satellite orbit (GSO) and of the frequency bands allocated to the broadcasting-satellite service (BSS);
- b)* that the great number of receiving installations using such directional antennas as could be set up for a BSS may be an obstacle to changing the location of space stations in that service on the GSO, as of the date of their being brought into use;
- c)* that satellite broadcasts may create harmful interference over a large area of the Earth's surface;
- d)* that the other services with allocations in the same frequency band need to use the frequency band before the BSS is set up,

resolves

1 that stations in the BSS shall be established and operated in accordance with agreements and associated plans adopted by world (WRCs) or regional (RRCs) radiocommunication conferences, as the case may be, in which all the administrations concerned and the administrations whose services are liable to be affected may participate;

2 that, during the period before the entry into force of such agreements and associated plans, the administrations and the Radiocommunication Bureau shall apply the procedure contained in Articles 9 to 14,

invites the ITU Council

to keep under review the question of WRCs, and/or RRCs, as required, with a view to fixing suitable dates, places and agendas.

¹ This Resolution does not apply to the frequency band 21.4-22 GHz.
