Mainit dot Org, Inc.

1.	There should be strong emphasis on the prevailing socio-economic and cultural gaps that influence, if not condition, the digital divide (within and between societies) and exacerbate human under-development. While it might be difficult to exhaustively discuss these non-technological gaps in the document, understating how they hold down overall human development could only sabotage any project to bridge the digital divide.

2.	WSIS must resolve to work with development organizations (especially those already working in developing countries) to come up with effective strategies and programs that integrate interventions (to bridge digital divides) into their existing development plans. The last thing we should see is the balkanization of development organizations into narrowly-focused units that do not cooperate with efforts to bridge the digital divide.
