

Council Working Group on Child Online Protection

October 10, 2023

Safeguarding Children Online:

*A service-specific view on risks and
parental attitudes*

About the study

- An understanding of children’s connectivity at a service-specific level is lacking.
- Knowledge gaps remain regarding how children and parents experience different online offerings, and what approaches parents use to safeguard their children online.

The study focused on five online services:

Messaging Applications (MA)

Examples:

- Signal
- Telegram
- WhatsApp

Online Games (OG)

Examples:

- Apex Legends
- Candy Crush
- Fortnite
- Minecraft
- Supermario
- Solitaire

Social Media (SM)

Examples:

- Facebook
- Instagram

Streaming Services (S/TV)

Examples:

- Amazon Prime
- Disney+
- HBO Max
- Netflix

User-generated content platforms (UGC)

Examples:

- Snapchat
- TikTok
- YouTube

Methodology

Quantitative phase:

Online survey

TMG and Geopoll conducted an online survey from April 16-May 8, 2023, with parents with children ages 5-17 to collect cross-sectional data. In total, 4,971 parents participated in the survey.

Qualitative phase:

In-depth online interviews

Based on the online survey results, TMG and Geopoll conducted 100 in-depth online interviews from July 6-28, 2023, with children and parents, to deepen understanding of the quantitative data.

Quantitative and qualitative countries:

Brazil, India, Nigeria, Saudi Arabia (KSA), United States (U.S.)

Quantitative only countries:

Egypt, France, Indonesia, Turkey

Objectives

1

What do parents think about their children's use of online services? How do parents perceive the benefits, opportunities, concerns, and negative experiences these services offer their children?

2

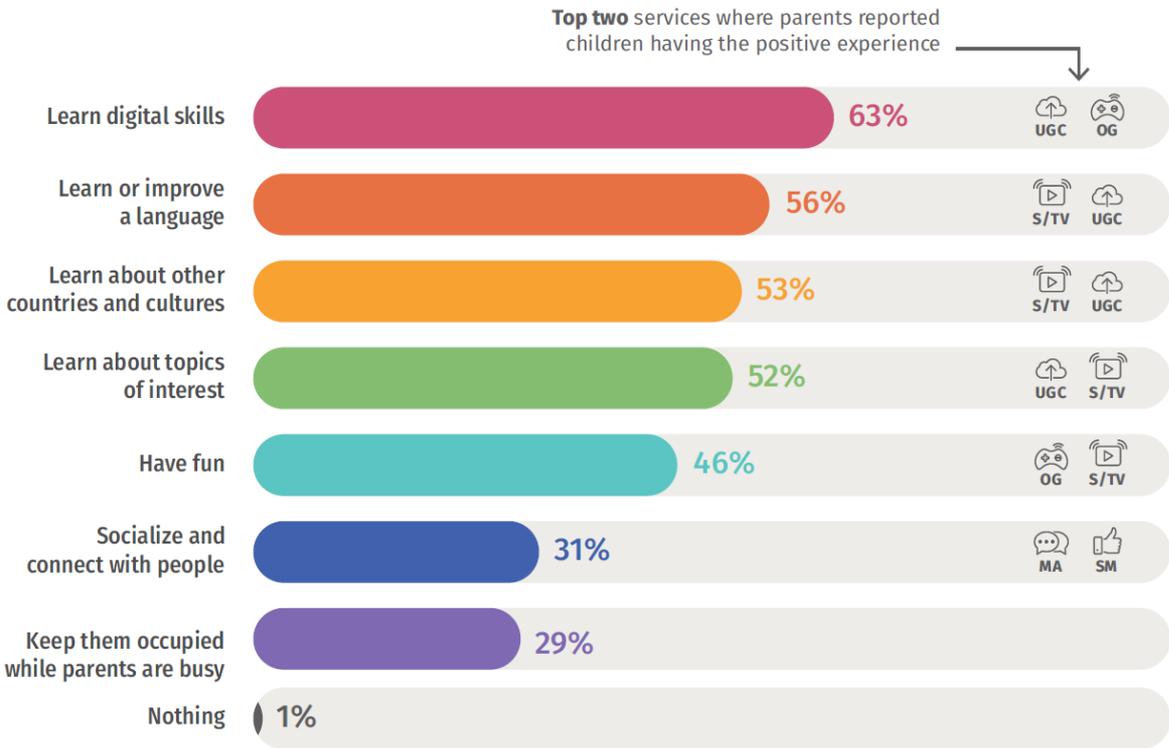

What do children experience when they use different online services? What are the benefits and risks different online services pose to children?

3

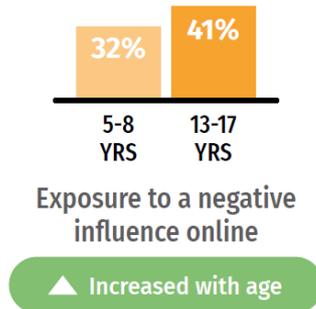

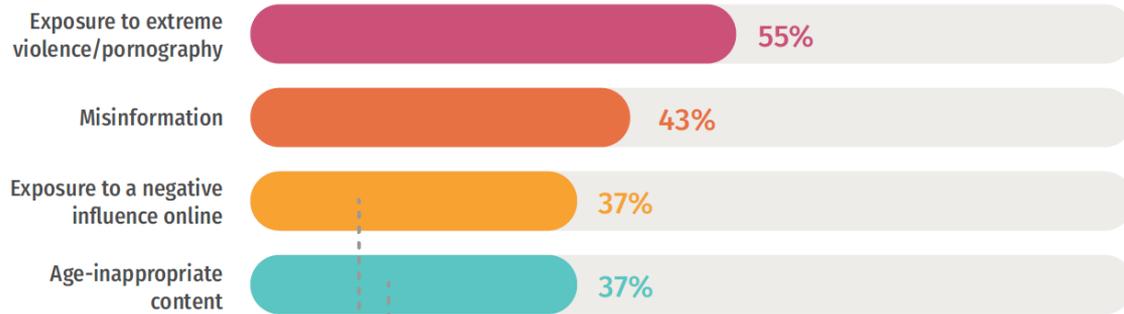

What role do parents play in ensuring that children are protected online? **How do parenting styles and approaches parents use to protect their children differ by online service?**

FINDINGS

Parents view online services as a means for their children to achieve success and learning

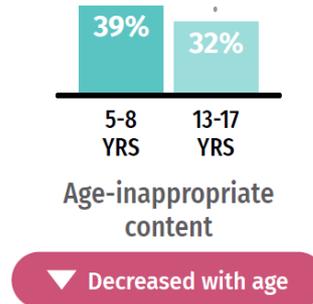

Parents are mostly concerned about extreme content, misinformation, exposure to negative influences online, and age-inappropriate content

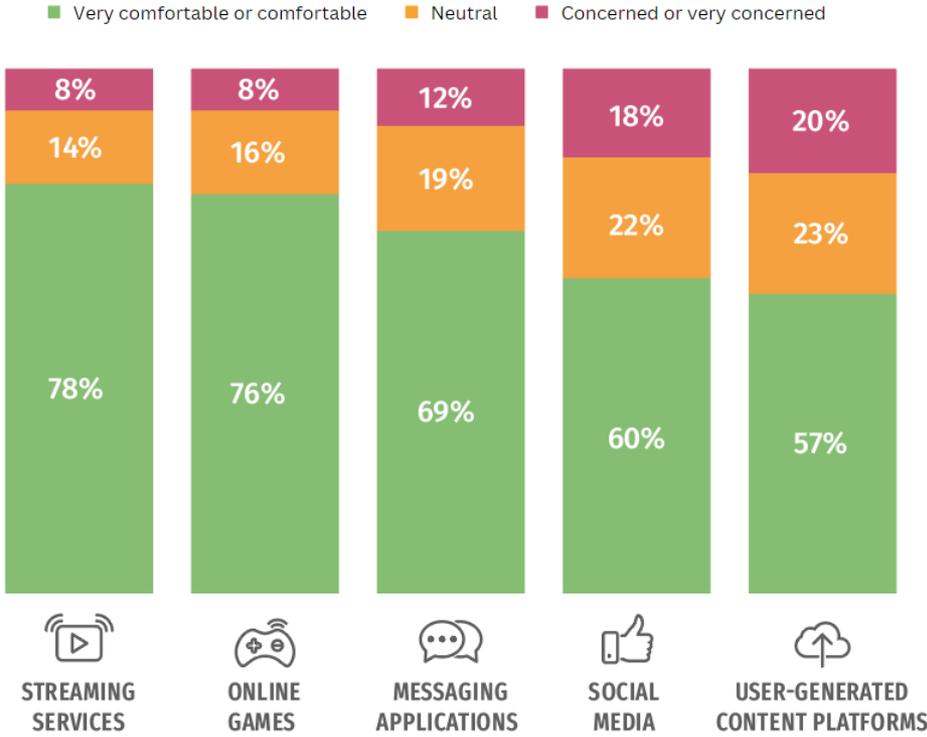

AGE DIFFERENCE

The number of parents that reported having concerns with their children being exposed to a negative influence online and age-inappropriate content varied depending on the age of the child

Not all risks are perceived equally; parents are more comfortable with streaming, online games, and messaging apps

Parents were most **concerned** with

- 

 User-uploaded content 
- User-to-user communications 

Parents were more **comfortable** with

- 

 Paid online services 

Parents use different strategies to manage their children's online activities, depending on the service

Most parents considered their **strategies were effective to protect their children online** but would like **additional help**

Children expressed similar concerns to parents and tailor their safety approach based on the online service

CONCERNS

Communicating with strangers

*“avoiding talking to the person on the game, **because you cannot know if it is an old person.**” – 13-year-old girl, Brazil.*

Undesired content

*“Like, **not looking up inappropriate things like that** [on UGC].” – 14-year-old girl, USA.*

SAFETY APPROACH

Social media and UGC

*“I would advise them to **keep your account private and don't accept requests from random people.**” – 17-year-old girl, India.*

Online games

*“Bullying via online games with multiplayer. **When I find out bullying or people making funny on others I turn the mute option.**” – 14-year-old boy, KSA.*
