# Guidance on AI and Children (Dec 2025)

As part of the [AI for children project](#), UNICEF has updated its guidance (version 3).

The guidance aims to:

- Promote children's rights in government and private sector AI policies and practices;
- Raise awareness of how AI systems can uphold or undermine these rights.

Drawing on the Convention on the Rights of the Child, the guidance offers 10 requirements for child-centered AI.

# AI Governance in Motion (Dec 2025)

This rapid review supports efforts to strengthen AI regulation by:

- Summarizing international and regional AI frameworks to understand current governance approaches.
- Examining regulatory models in four jurisdictions, with a focus on how they address AI's impact on children.

It warns against a 'wait-and-see' approach, arguing that the impacts on children may be more difficult to undo than to prevent.
