RE: Intel Patent Policy for G.992.3 Amd. 1 – Amendment 1 to G.992.3: Asymmetrical Digital Subscriber Line (ADSL) Transceivers – 2 (ADSL 2)

Dear Mr. Zhao;

This letter sets forth Intel Corporation's ("Intel") patent licensing policy regarding G.992.3 Amd. 1 – Amendment 1 to G.992.3: Asymmetrical Digital Subscriber Line (ADSL) Transceivers – 2 (ADSL 2) ("Specification"). Intel has not performed a search of its patent portfolio for the purpose of determining whether Intel has any relevant patents or patent applications (collectively "Intellectual Property Rights" or "IPR"). Intel is not willing to waive its rights in its relevant IPR, if any.

Intel, however, is willing to negotiate licenses for its relevant IPR on reasonable and non-discriminatory terms and conditions provided that the Specification is adopted by the ITU without any substantive changes or additions. In particular, Intel is willing to negotiate nonexclusive, worldwide licenses under its relevant IPR to allow the manufacture, use, sale, offer for sale and importation of the portions of any product that implement and are compliant with all relevant portions of the Specification. Intel shall not grant licenses that extend to any part or function of a product that is not required to implement or comply with the Specification.

Intel's license grant may be conditioned upon the licensee's willingness to grant a reciprocal license under the licensee's IPR and IPR owned by parties with which licensee is affiliated. In determining license terms for its relevant IPR, Intel may refer to the royalty rates that a potential licensee has set for its own IPR and IPR of parties with which it may be affiliated. Intel also reserves the right to grant licenses to its IPR as part of a cross-license with any other party.

Please contact the Office of the General Counsel at Intel Corporation, +1 (408) 765-1125 concerning any licensing matters.

Very truly,

Douglas B. Luftman
Intel IP Counsel
