

EcoDesign of ICT Society

-Low-Carbon Society Scenario Toward 2050-

15 April 2008

Jun Fujimoto

Professor, Dr. Eng.,

**Research Center for Advanced Science & Technology,
The University of Tokyo**

EcoDesign for a ICT Society

The 'EcoDesign' aims at making the positive effect larger than the negative effect.

Positive or Negative side

-Changes in the industrial form
(Domestic; Positive, Worldwide: ?)

Positive side

- Improvements in transportation efficiency, and so forth
- Advancement and improvement of environmental measures through ICT

Negative side

- Increases resource , energy consumption, and amount of waste
- Rebound effect

Model of Rebound Effect

Society

Technology

Dissolution of fundamental traditional values
Negative mental/spiritual effect

ICT Diffusion

Forms of 'Emptiness'
i.e. Loneliness, Boredom, Lack of meaning

Facile lifestyle

Loss of authentic human contact

Versatile society

Rebound Effect

Search for deep satisfaction

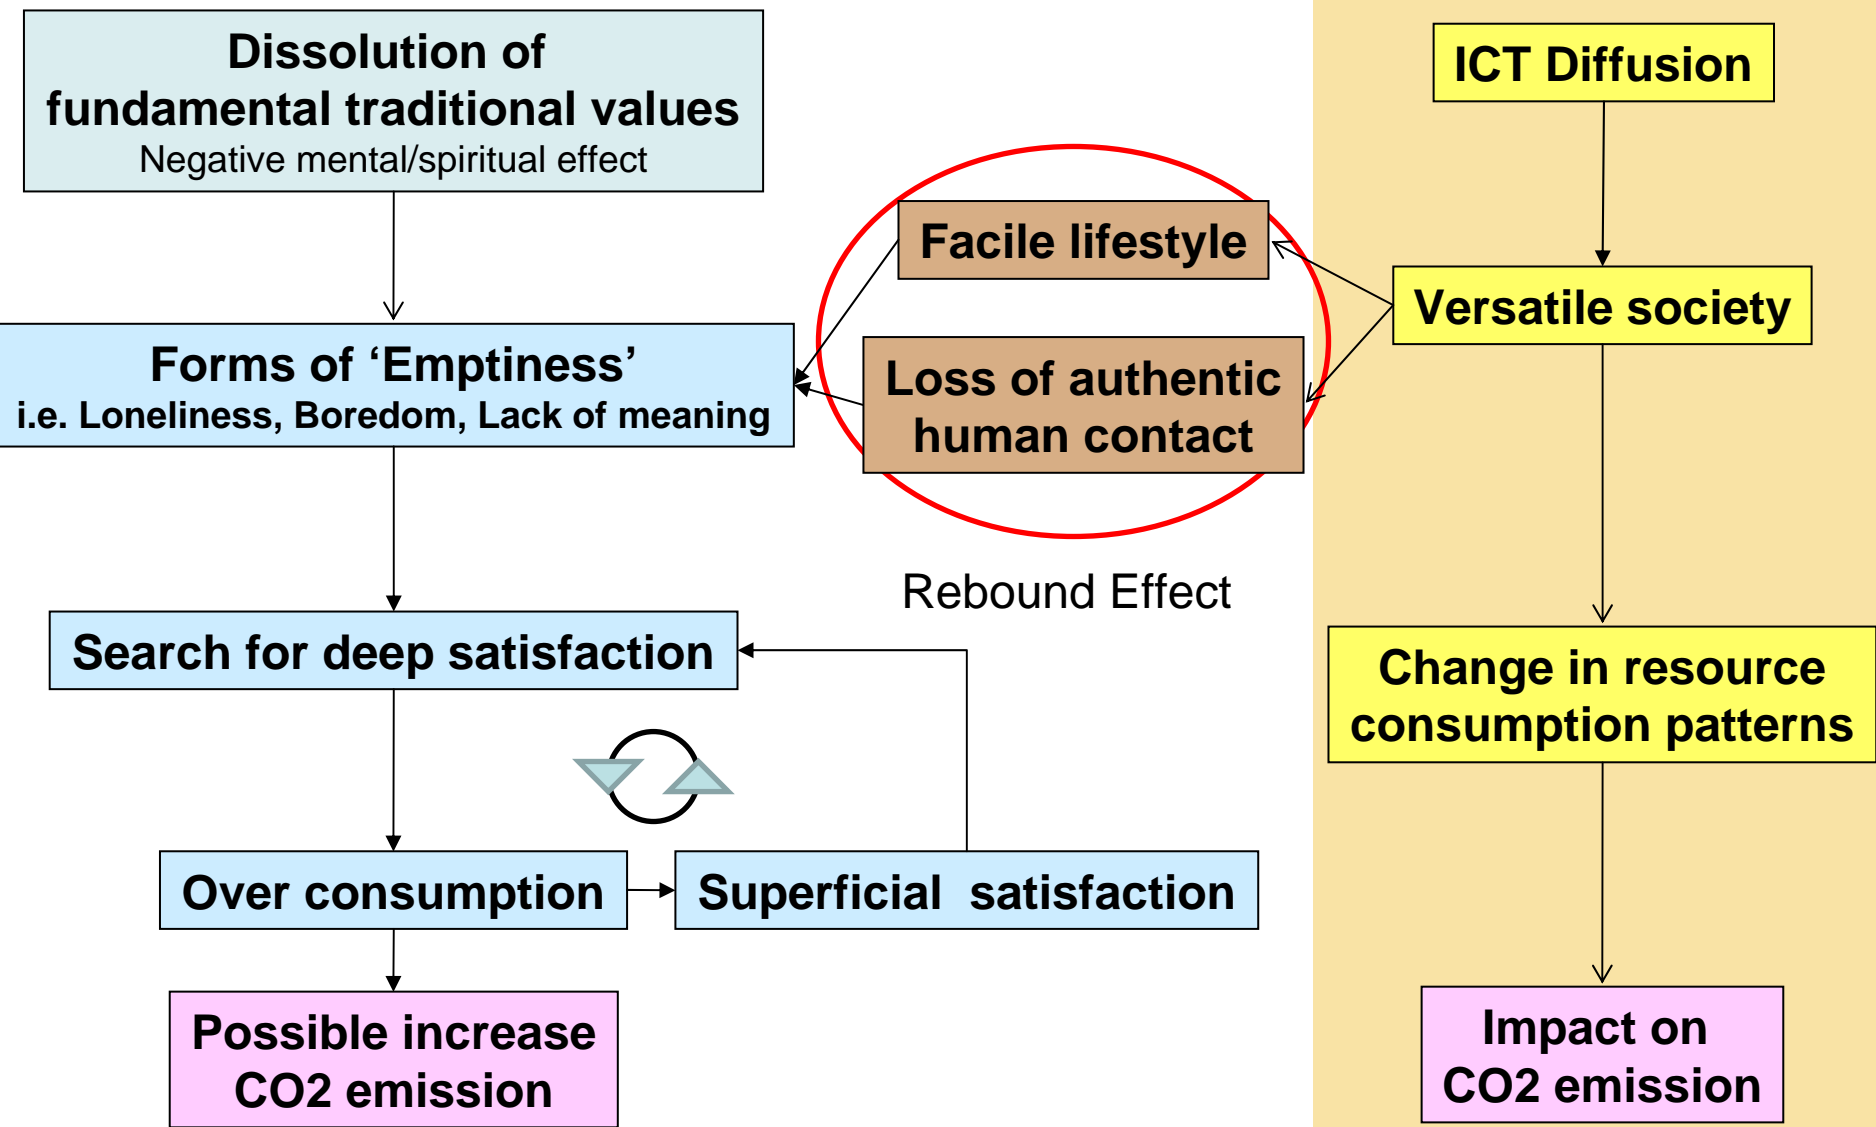

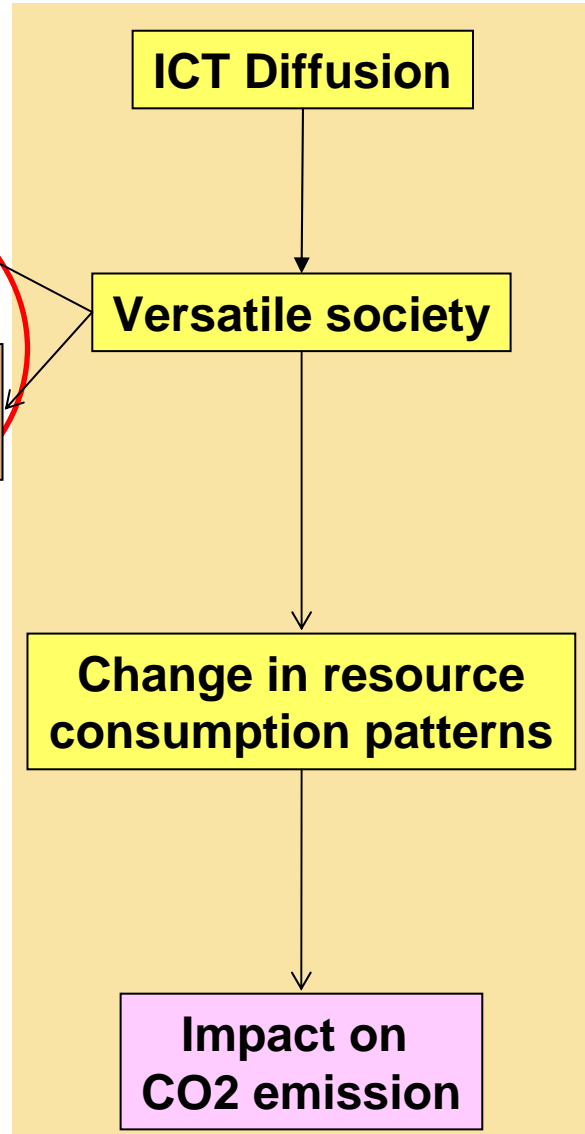

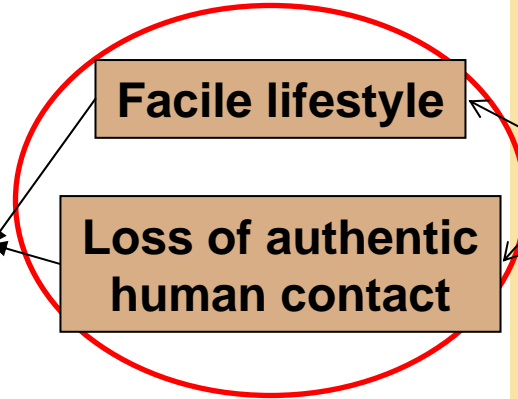

Change in resource consumption patterns

Over consumption

Superficial satisfaction

Possible increase CO2 emission

Impact on CO2 emission

Future impact of ICT in 2020

	Industry	Freight transport	Passenger transport	Office	Home	Recycling	Impact on CO2 emissions
Diffusion of ICT equipment	Resource			Electric	Electric	Waste	Negative II
Supply chain management (B2B)							Positive I
Internet shopping (B2C)	Resource consumption	Resource consumption		Number of shops			Negative/Positive
Teleworking			Transport	Number of offices	Electric power		Positive III
Advanced traffic utilization system (modal shift in commuting, ETC, etc.)		Transport	Energy consumption				Positive II
Dematerialization system (newspaper, magazine, and CD)	Resource consumption	Transport		Number of shops		Waste	Positive III
Energy management (HEMS, BEMS)							Positive II
Eco-life guidance system			consumption	power	power		Positive I
A product and manufacture management	Resource consumption						Positive I
Recycling information system	Resource consumption					Waste	Negative/Positive
E-government			Transport			Wastes	Positive III

CO2 reduction of 2 to 3% in 2010

CO2 reduction of 10% in 2050

+1 to 2%

-3%

-1%

-1%

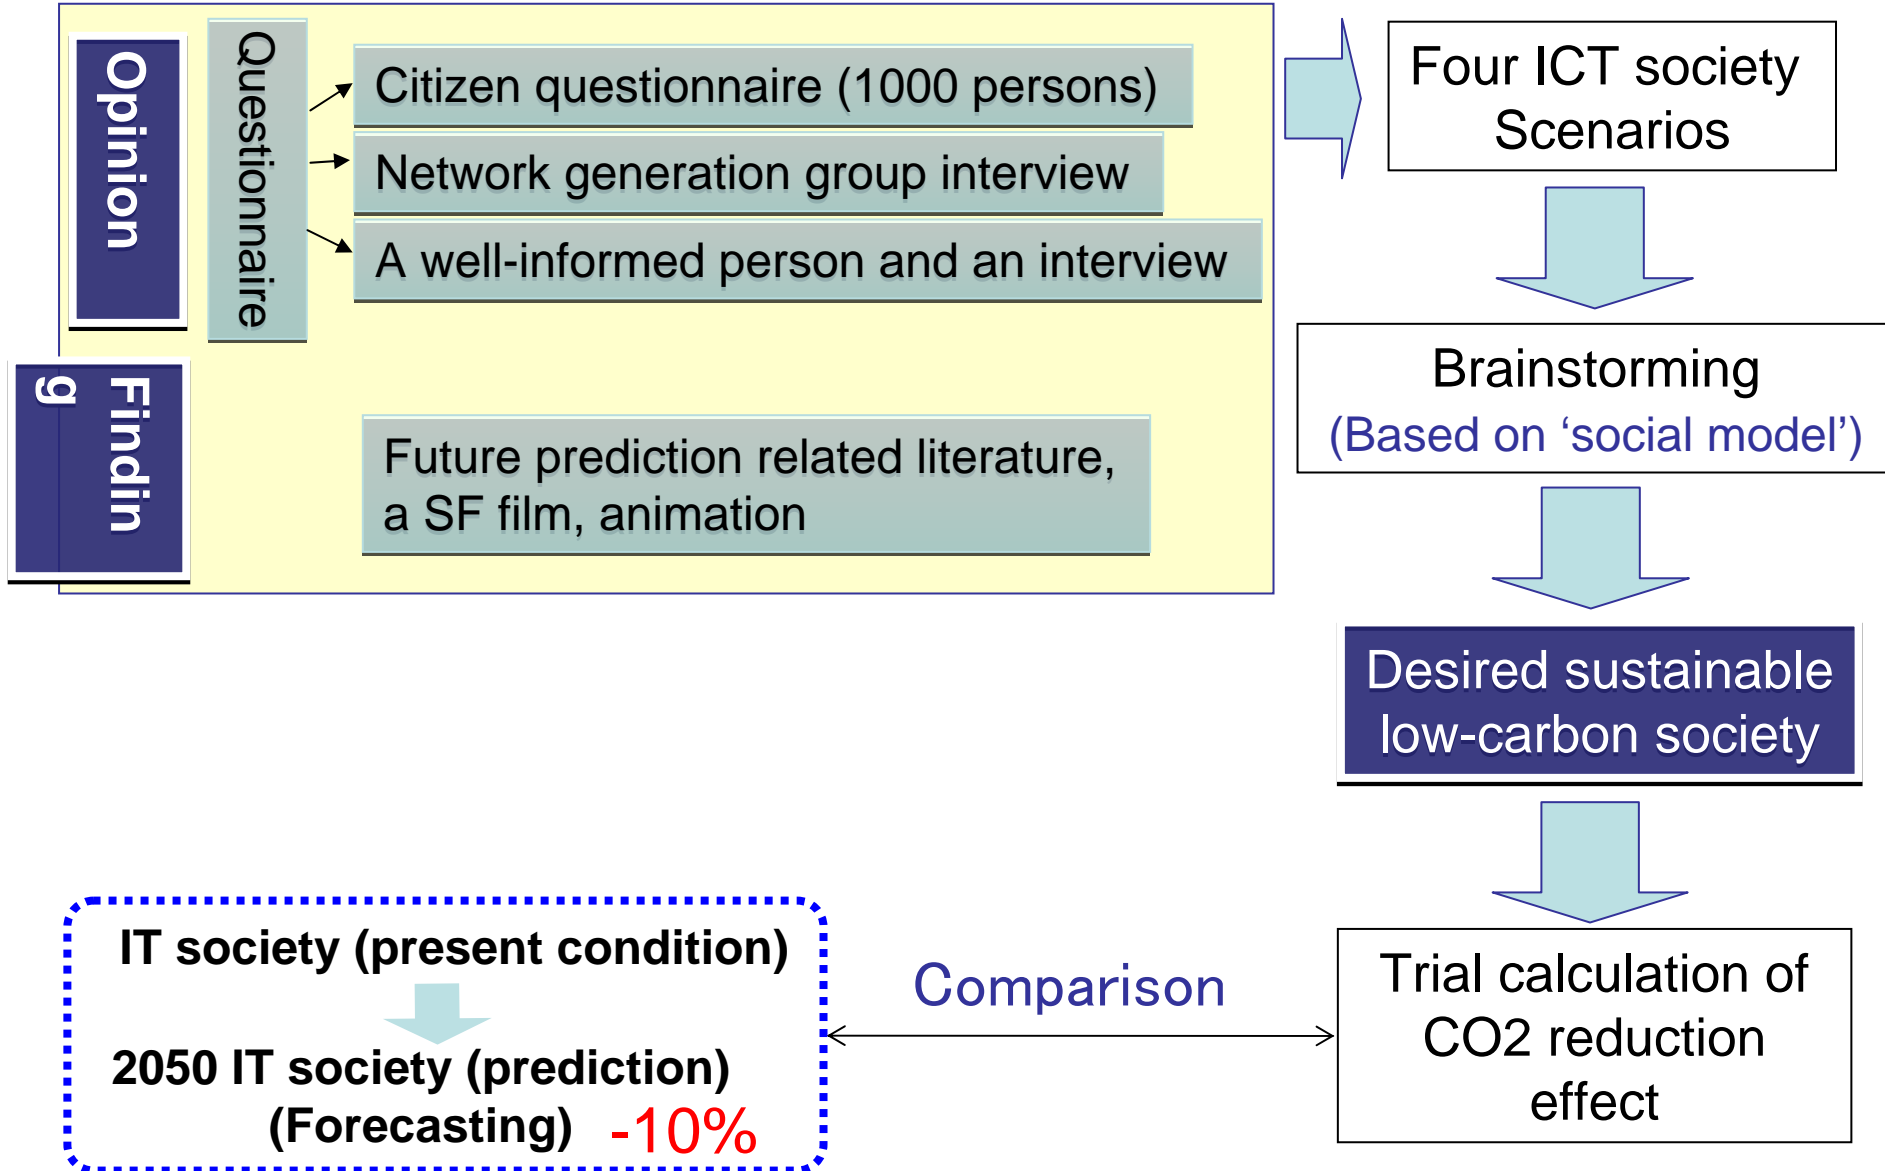

-1 to -2%

	Reduction
	Unknown
	Increase

	Rate to the total 2020' emissions
I	3-5%
II	1-3%
III	0-1%

Creation method of 2050 social images

Material collection

Design Low Carbon Society Using Advanced ICT

Society

Technology

Transform fundamental structure
i.e. social, political, lifestyle

**Advanced ICT
Diffusion**

**Integrated ICT and
traditional values**

**Authentic
human contact**

Versatile society

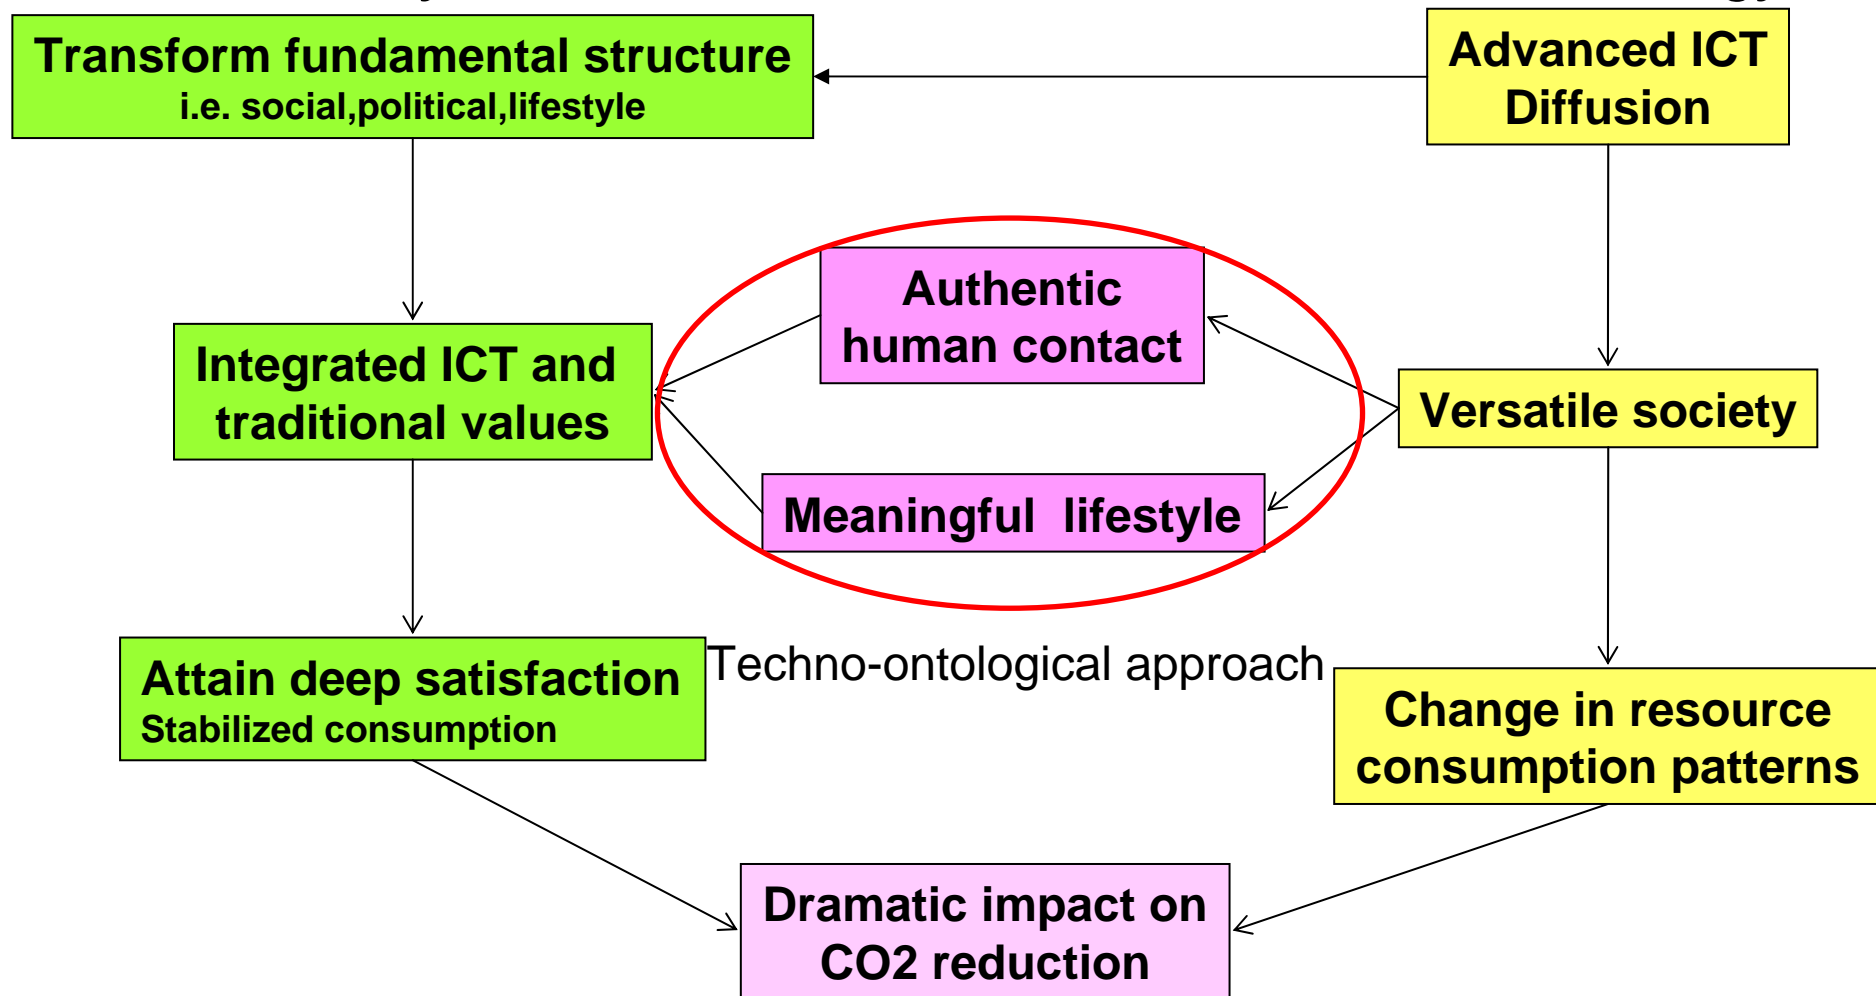

Meaningful lifestyle

Attain deep satisfaction
Stabilized consumption

Techno-ontological approach

**Change in resource
consumption patterns**

**Dramatic impact on
CO2 reduction**

Family life style

Virtual door system

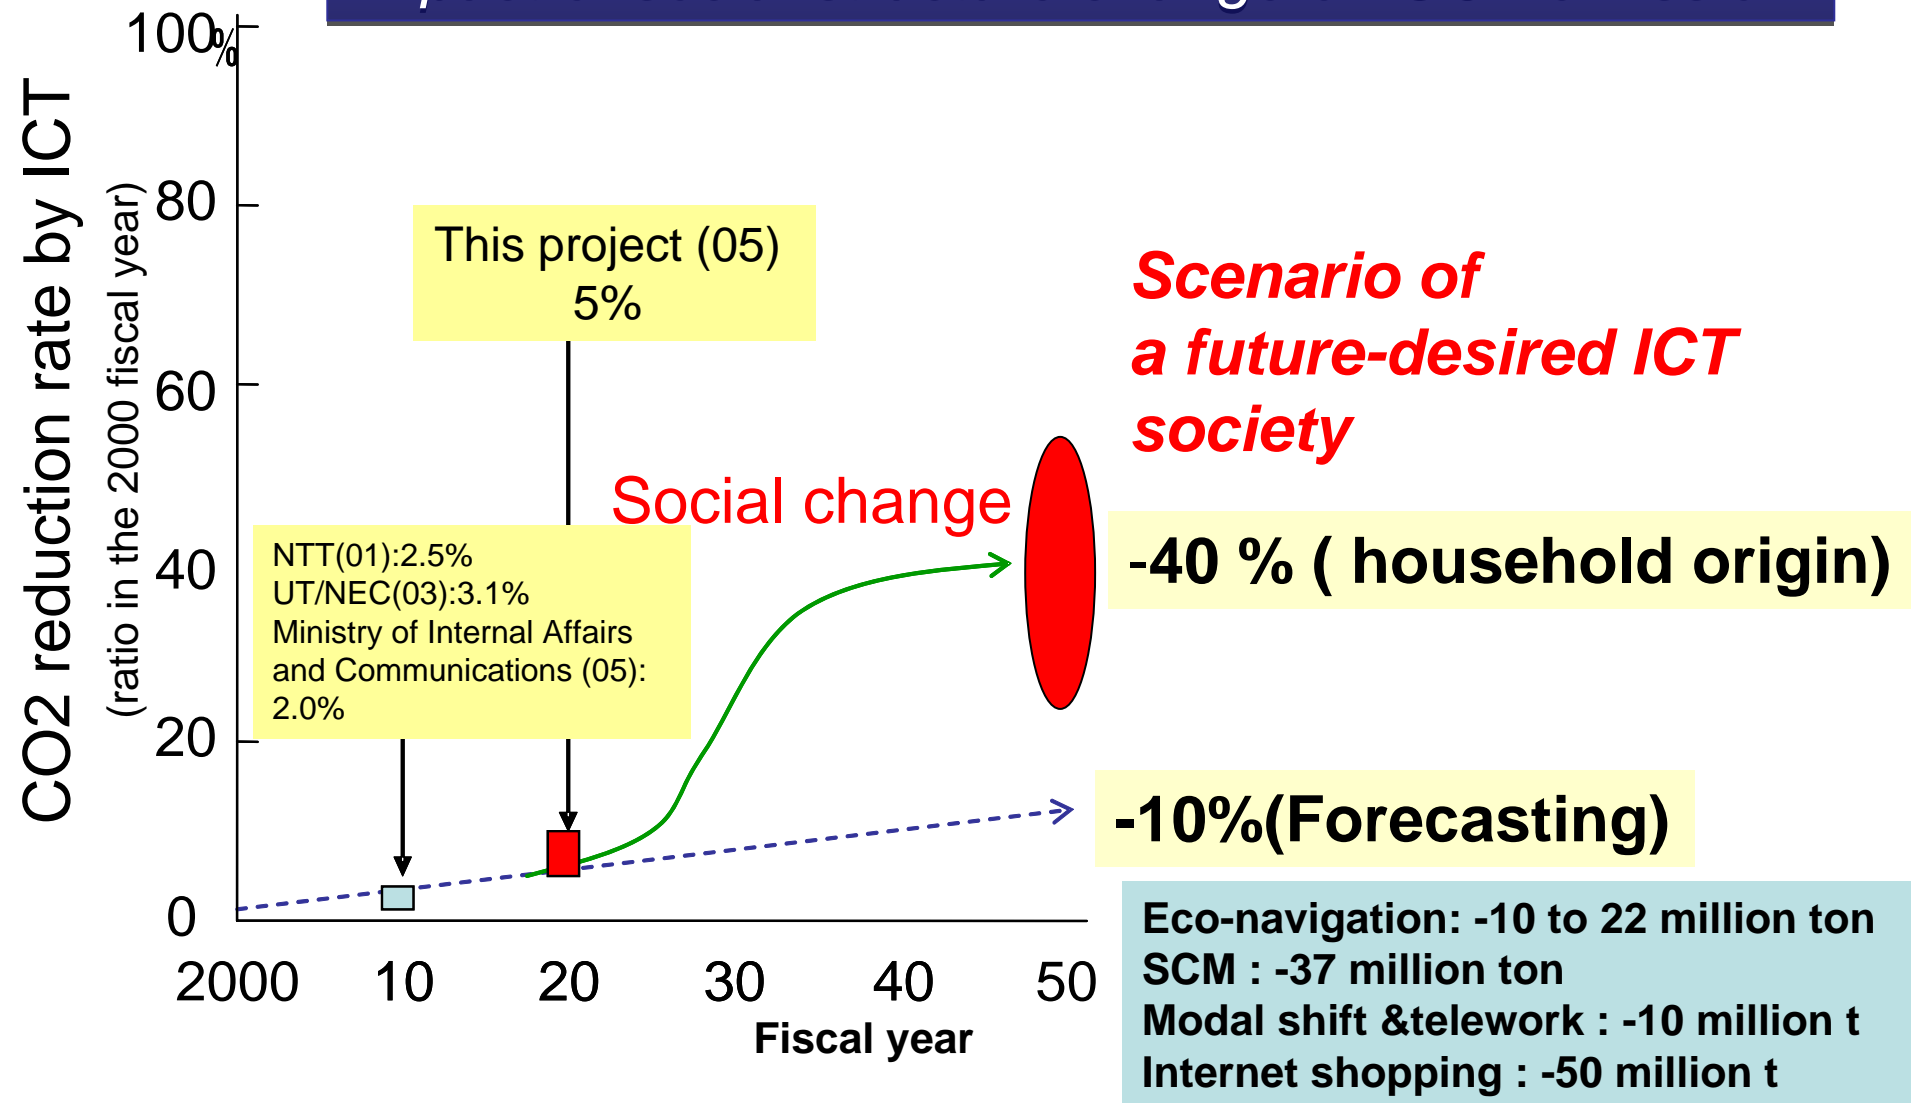

IT magnifying glass

Home automation

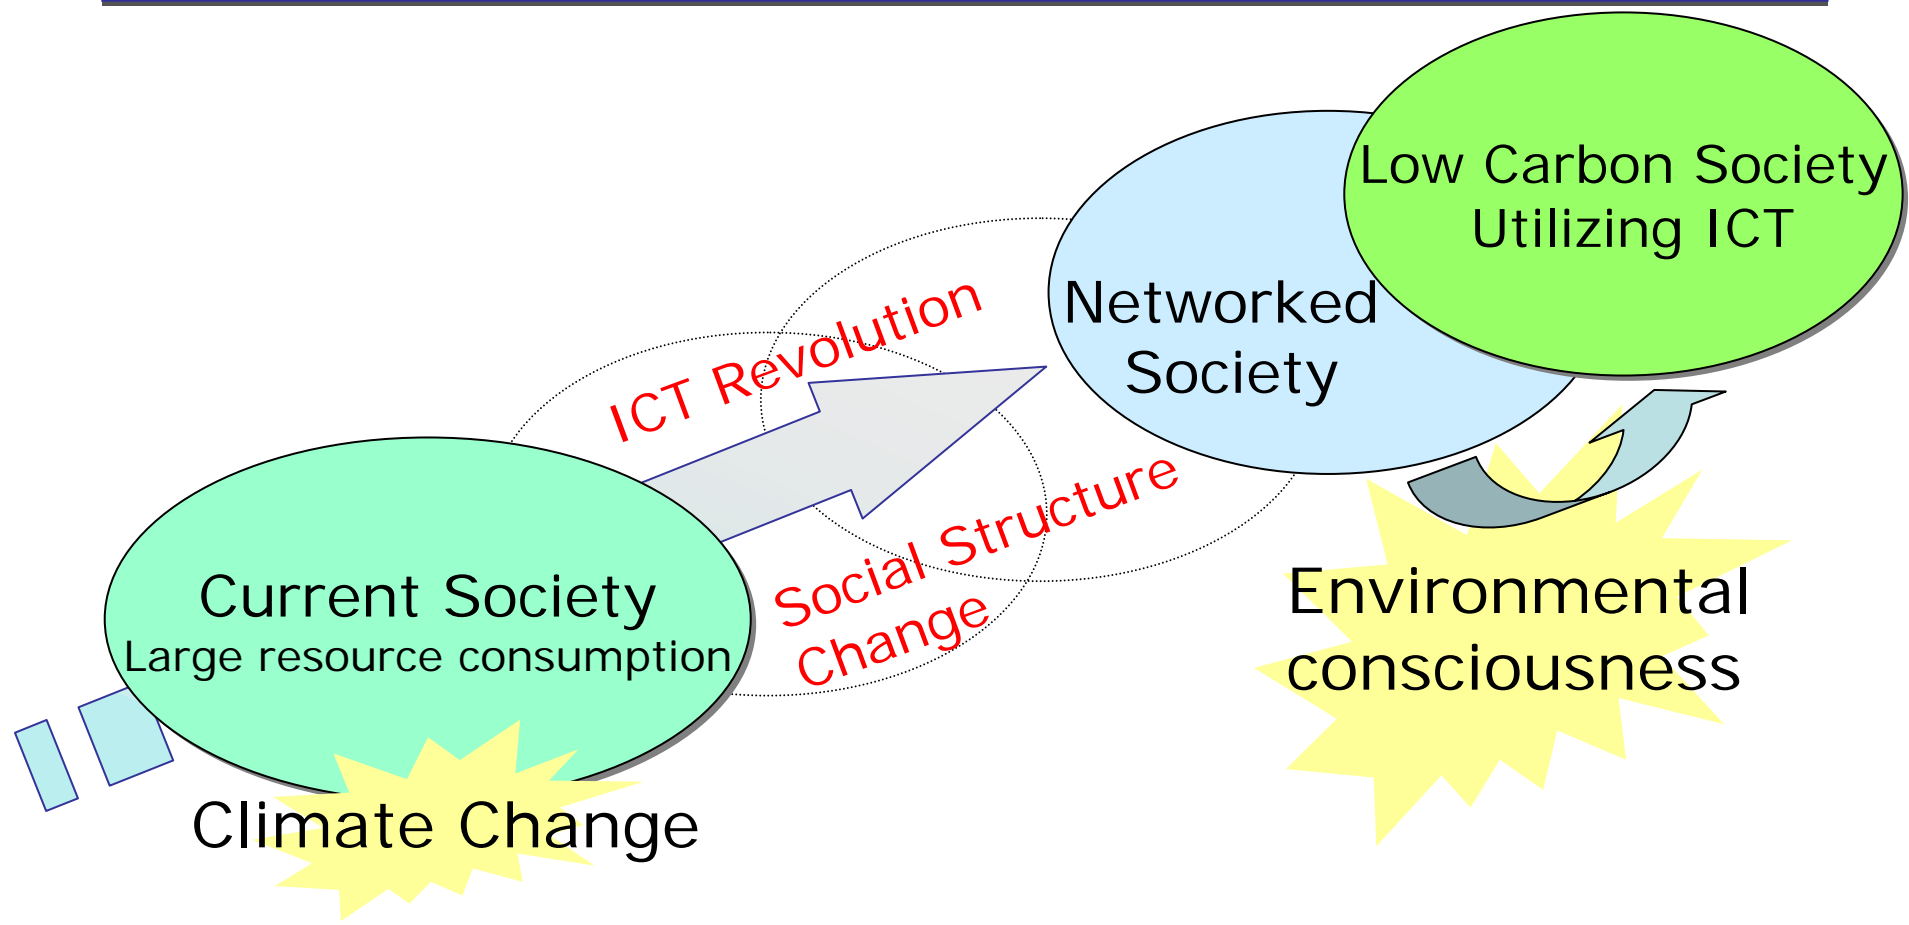

Considering Paradigm Shift or Not

Impact of social structure change on CO2 emission

Consideration of Essential View of 'ICT&Environment'

- 1) Adding Environmental consciousness to drastic 'social change' brought by ICT revolution
- 2) Consideration ICT impact on human mental/emotional situations

Causal Approach?

過食

病気に悩まされたい

かっこよくなりたい

Thank you!

過度な食事

Cure hyperphagia

Prevent a Disease
病気を予防

Moderate
適度な食事

自己を高める
Self-actualize
