

# New Heart Care System based on UT-Heart for Tailor-made Medicine

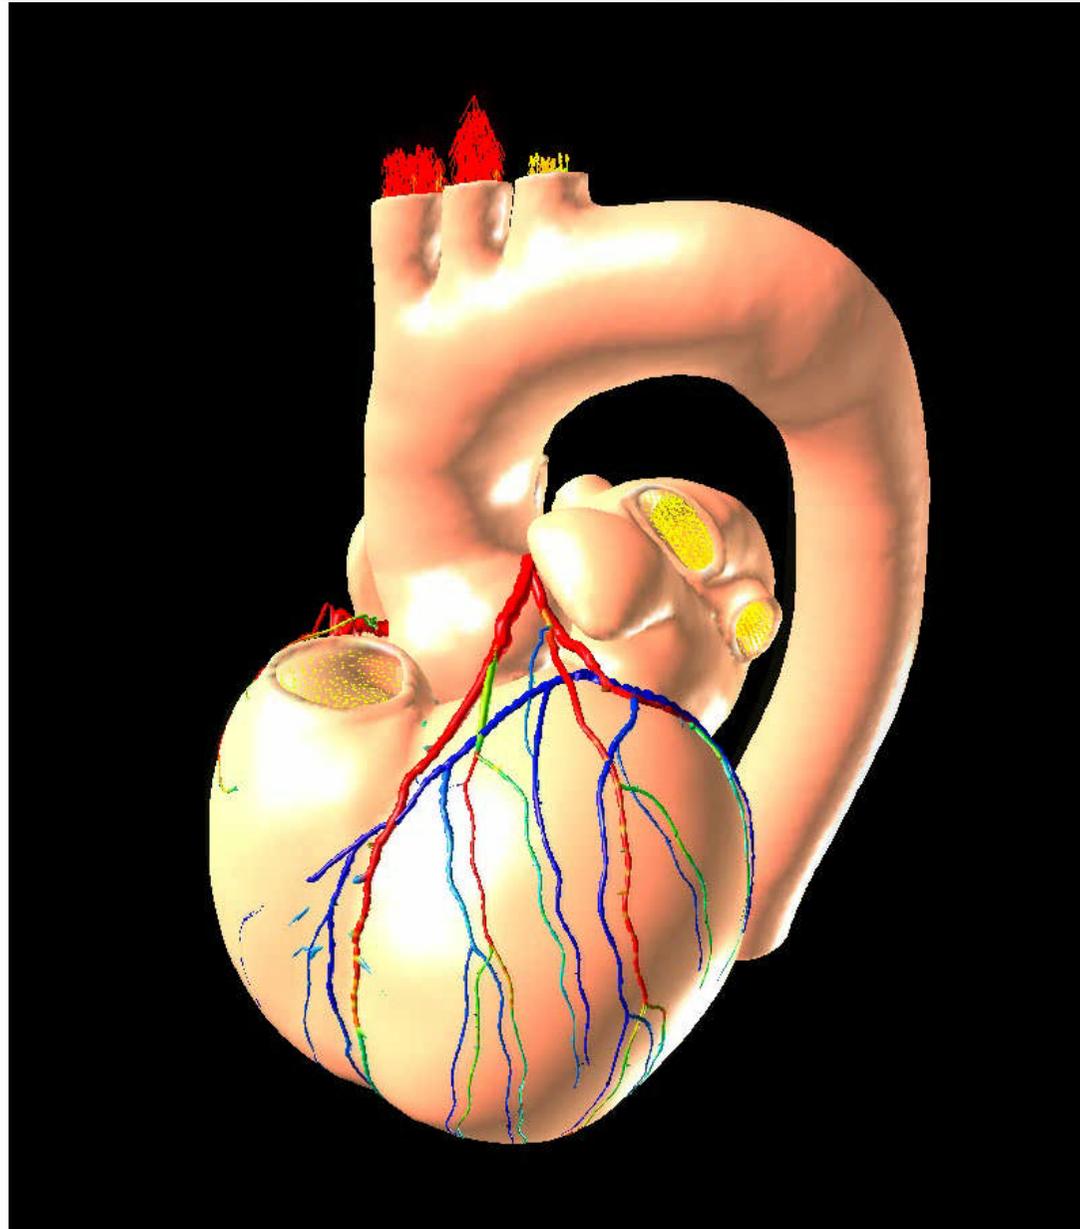

Prof. Toshiaki Hisada, Ph.D. in Eng. Univ. of Tokyo

Prof. Seiryu Sugiura, Ph.D. in MD. Univ. of Tokyo

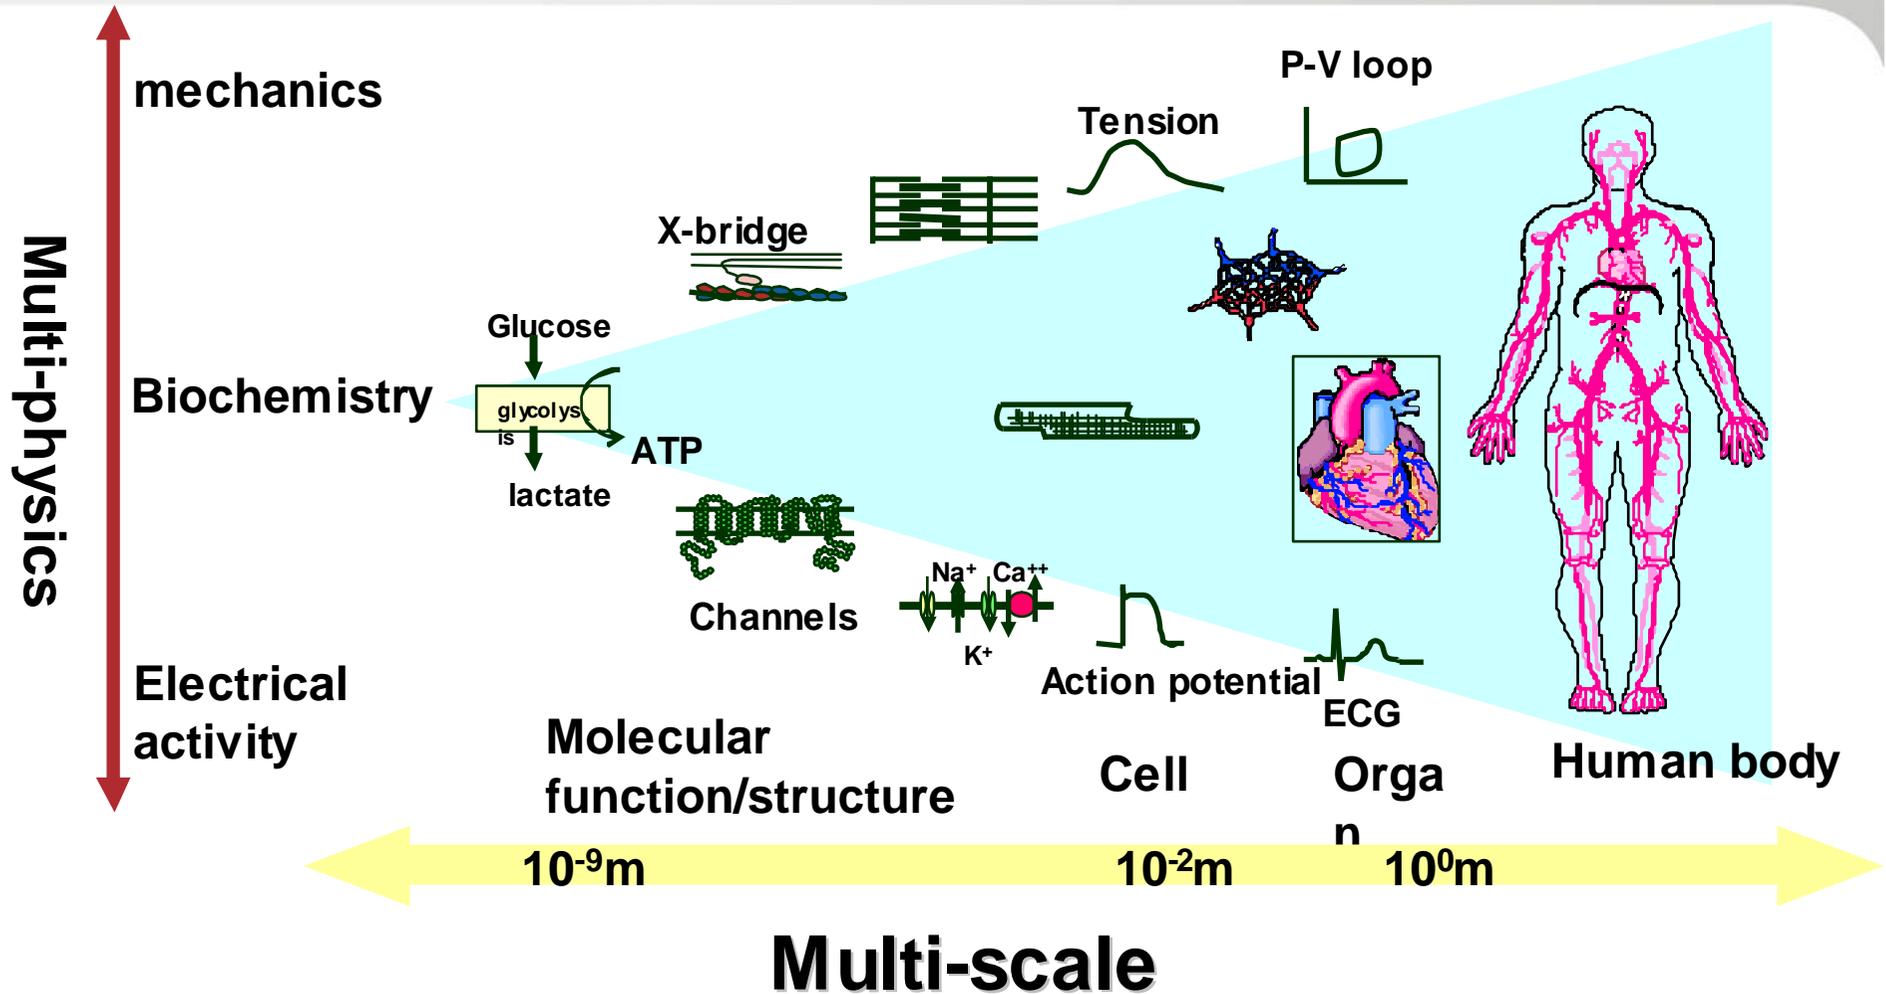

Yoshimasa Kadooka, Ph.D. in Sci. Fujitsu Ltd.

- Collaborative research with Hisada Lab. of the University of Tokyo
- Supported by Japan Science and Technology Agency

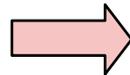

# Results of computational simulation by using UT-Heart

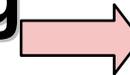

# What we are aiming at.

**Integration**  
of knowledge

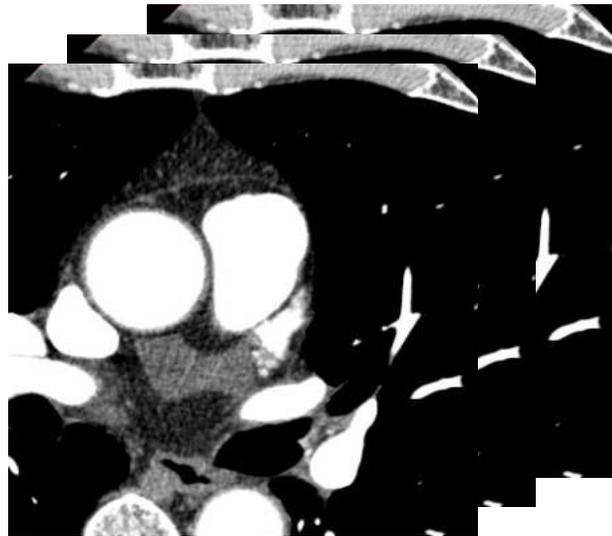

**Understanding**  
of human body

**Discovery**

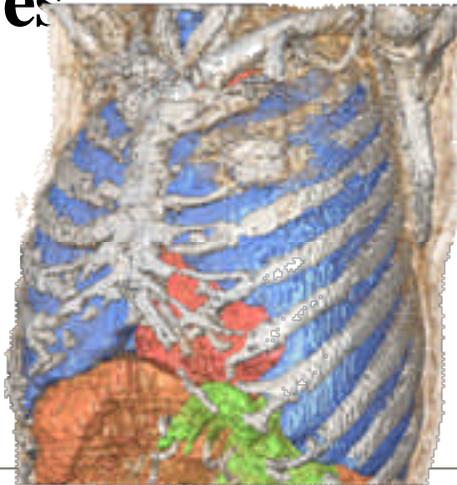

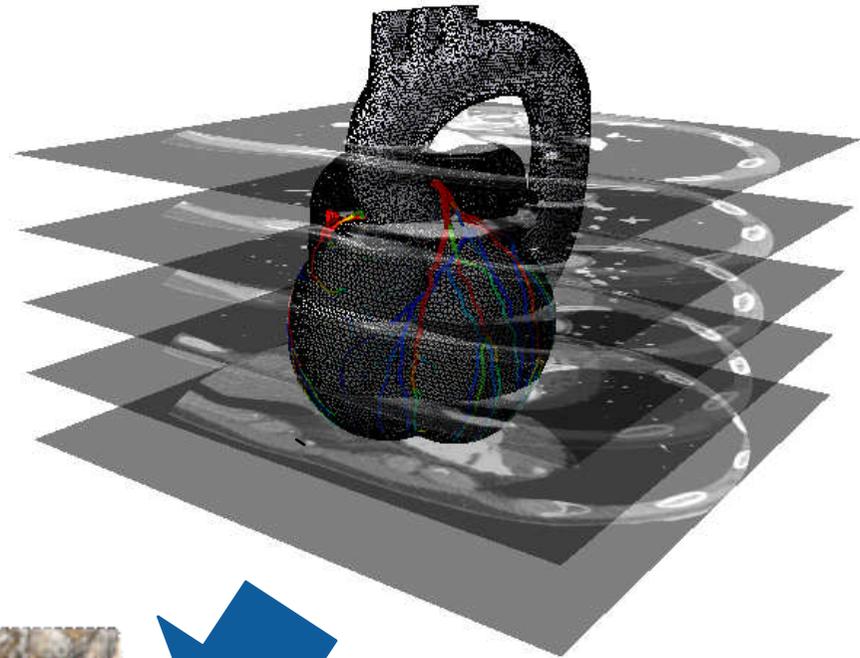

# Construction of numerical model based on CT-images

**CT-scan images**

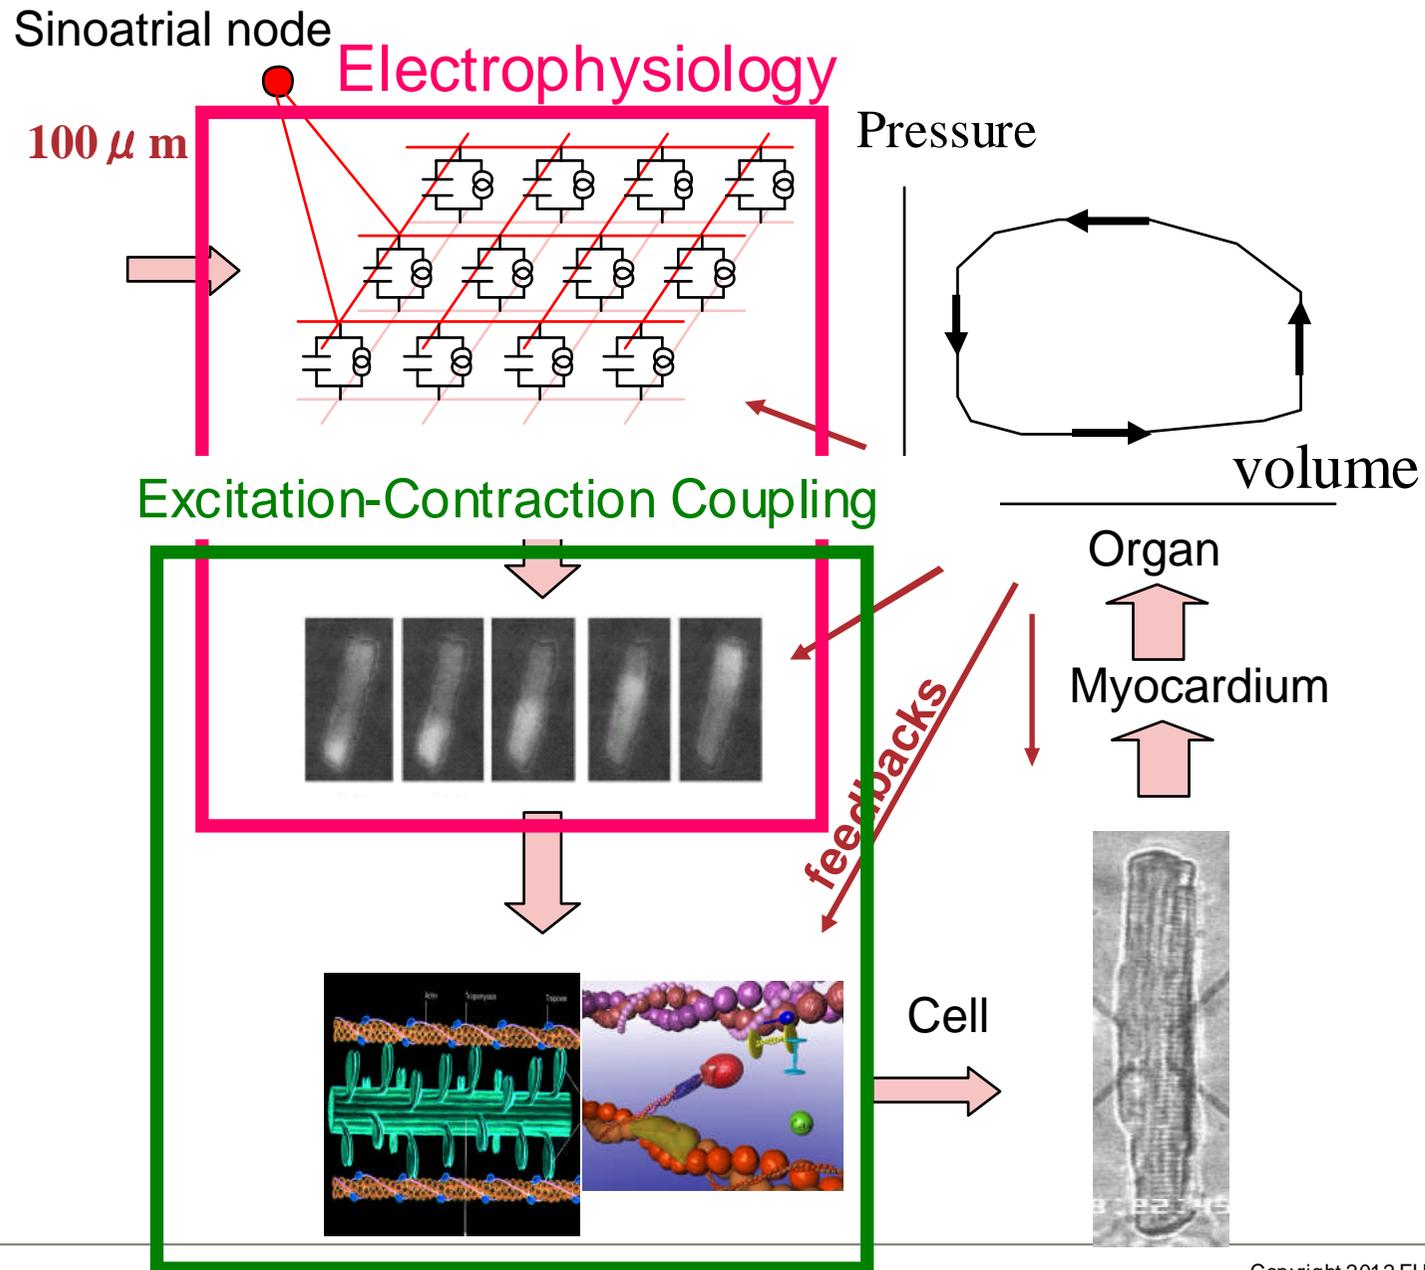

**Geometry**

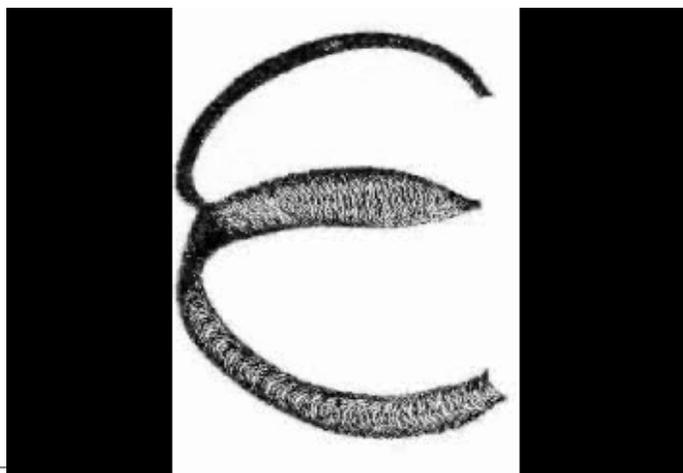

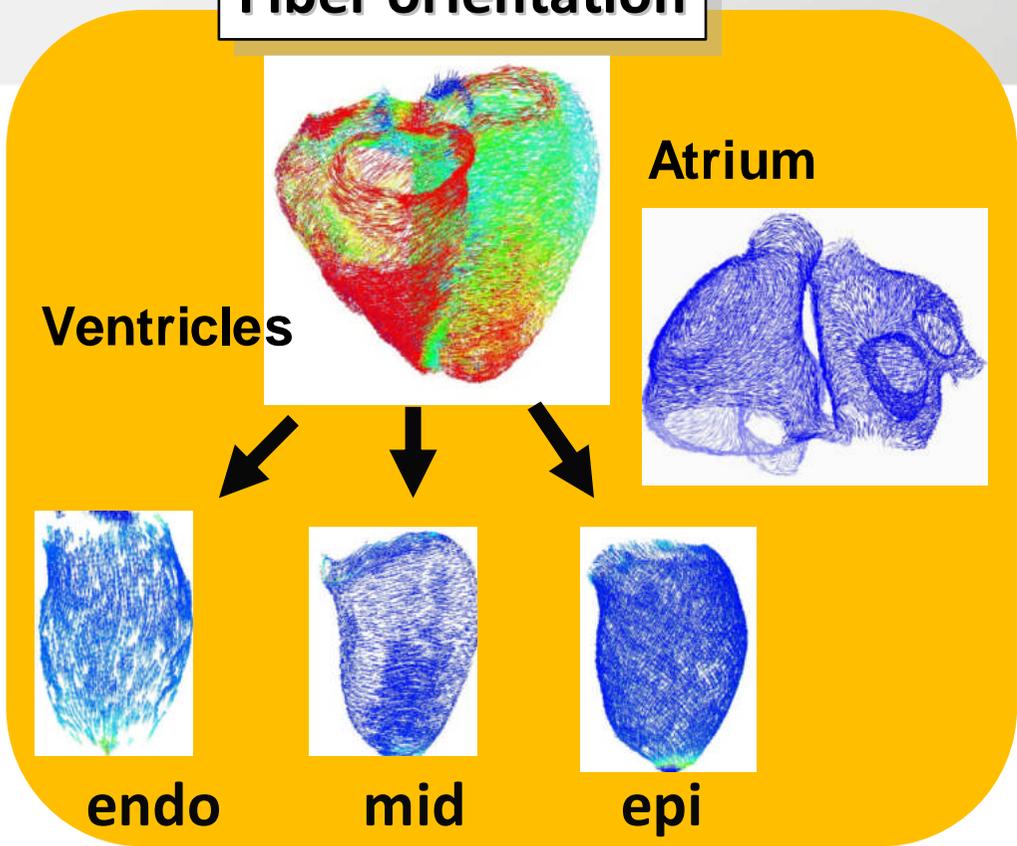

**Imbedding to  
the torso  
model**

# Pumping Principle of the Heart as a Blood Pump

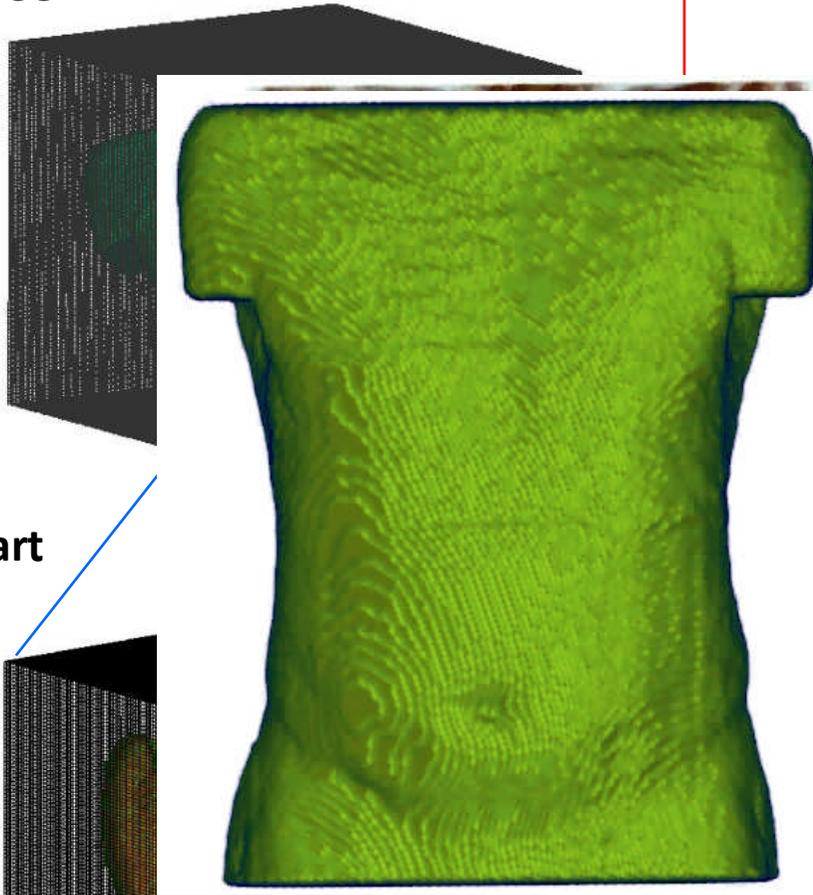

# Fiber orientation

### Voxel model for EP analysis

Torso

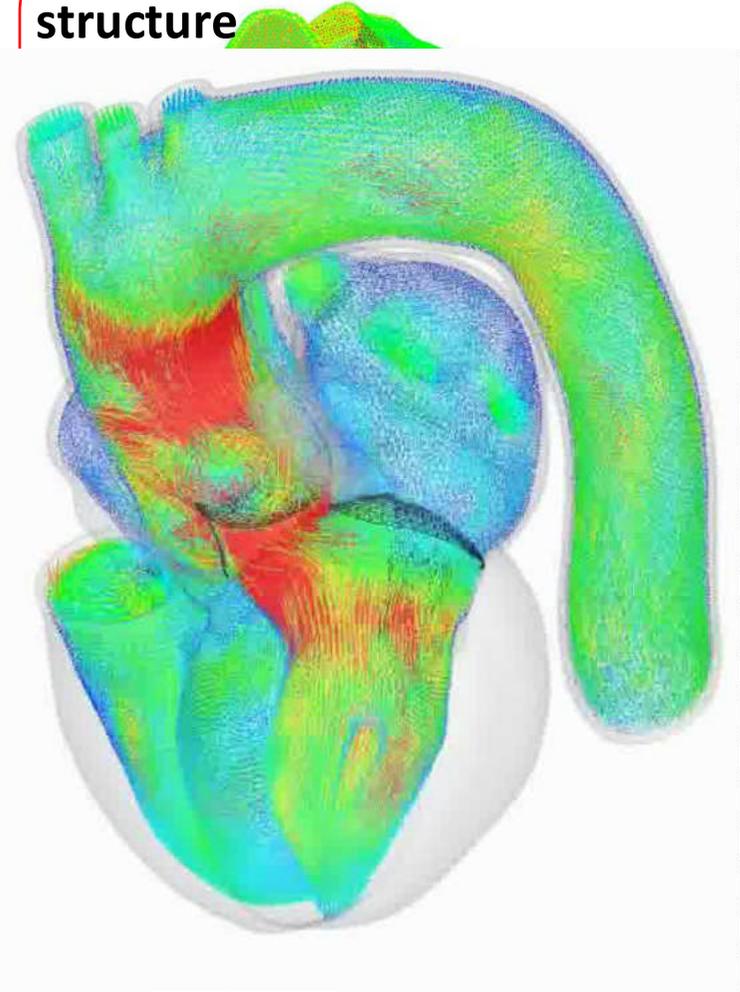

Heart

30,819,249 nodes

(Total 49,425,860 nodes )

### Tetrahedral FEM model for mechanics

structure

435,227 elements  
1,668,669 DOF

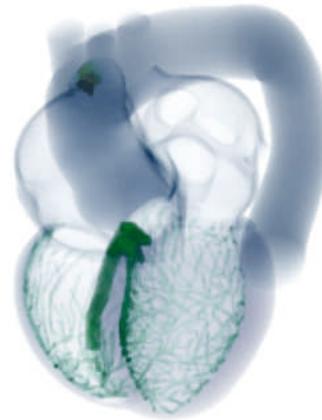

(total ~4.2 million DOF)

# Measurement of Electrocardiogram (ECG)

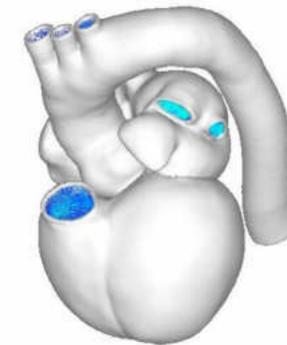

- Comparison of ECG measurement between heart simulator and human heart

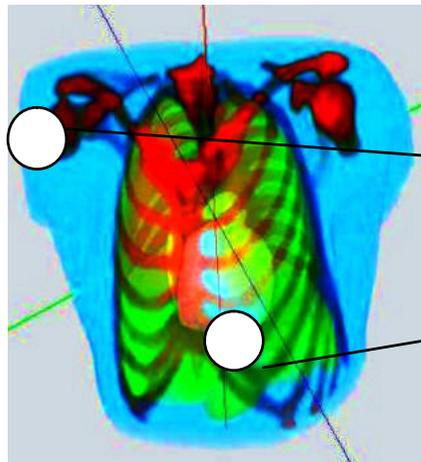

Potential Distribution on torso surface

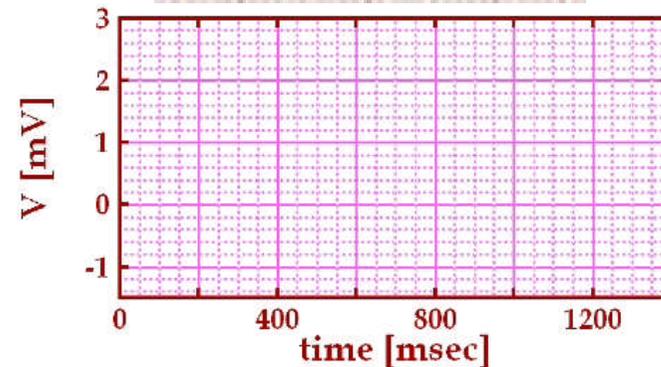

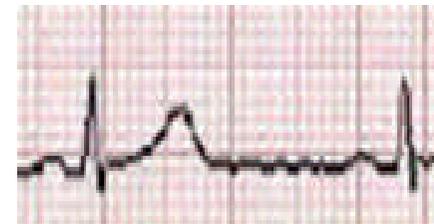

Cardiac Excitation

Cardiac Pumping

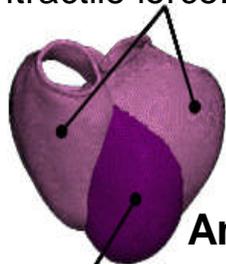

Lead II ECG

# Planning of Surgery for Dilative Cardiomyopathy

## ■ Surgery Planning of “Batista” by Heart Simulator

Contractile force: 100%

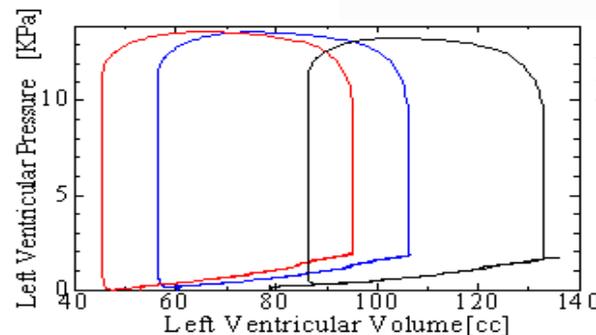

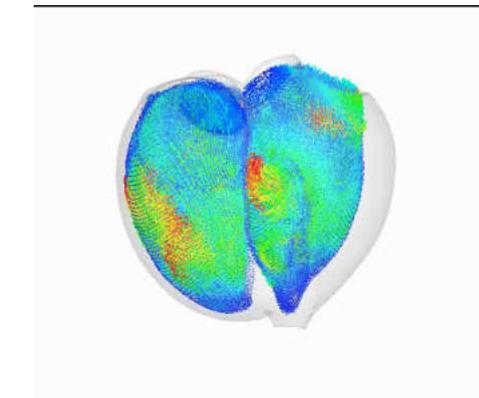

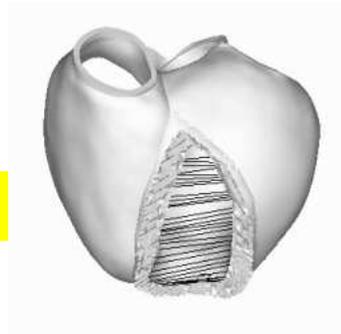

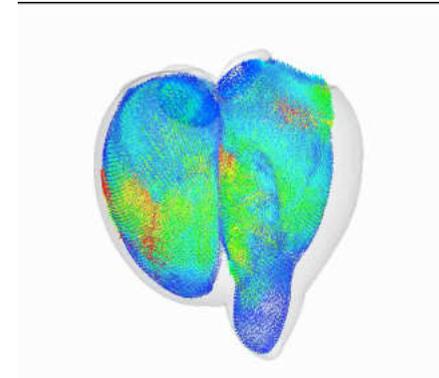

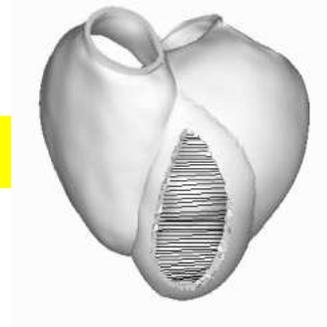

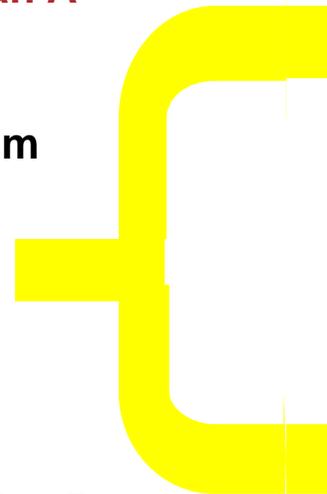

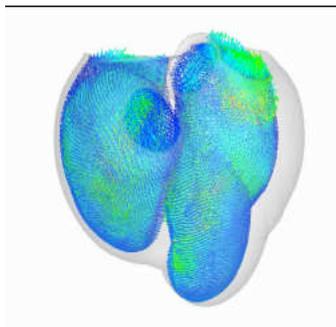

**Plan A**

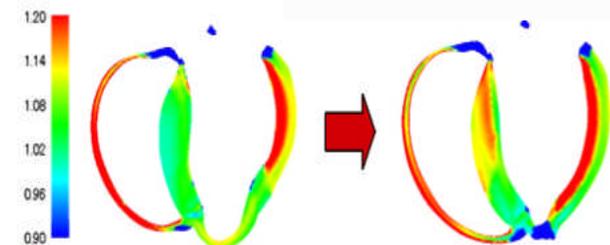

Necrotic myocardium

Contractile force: 30%

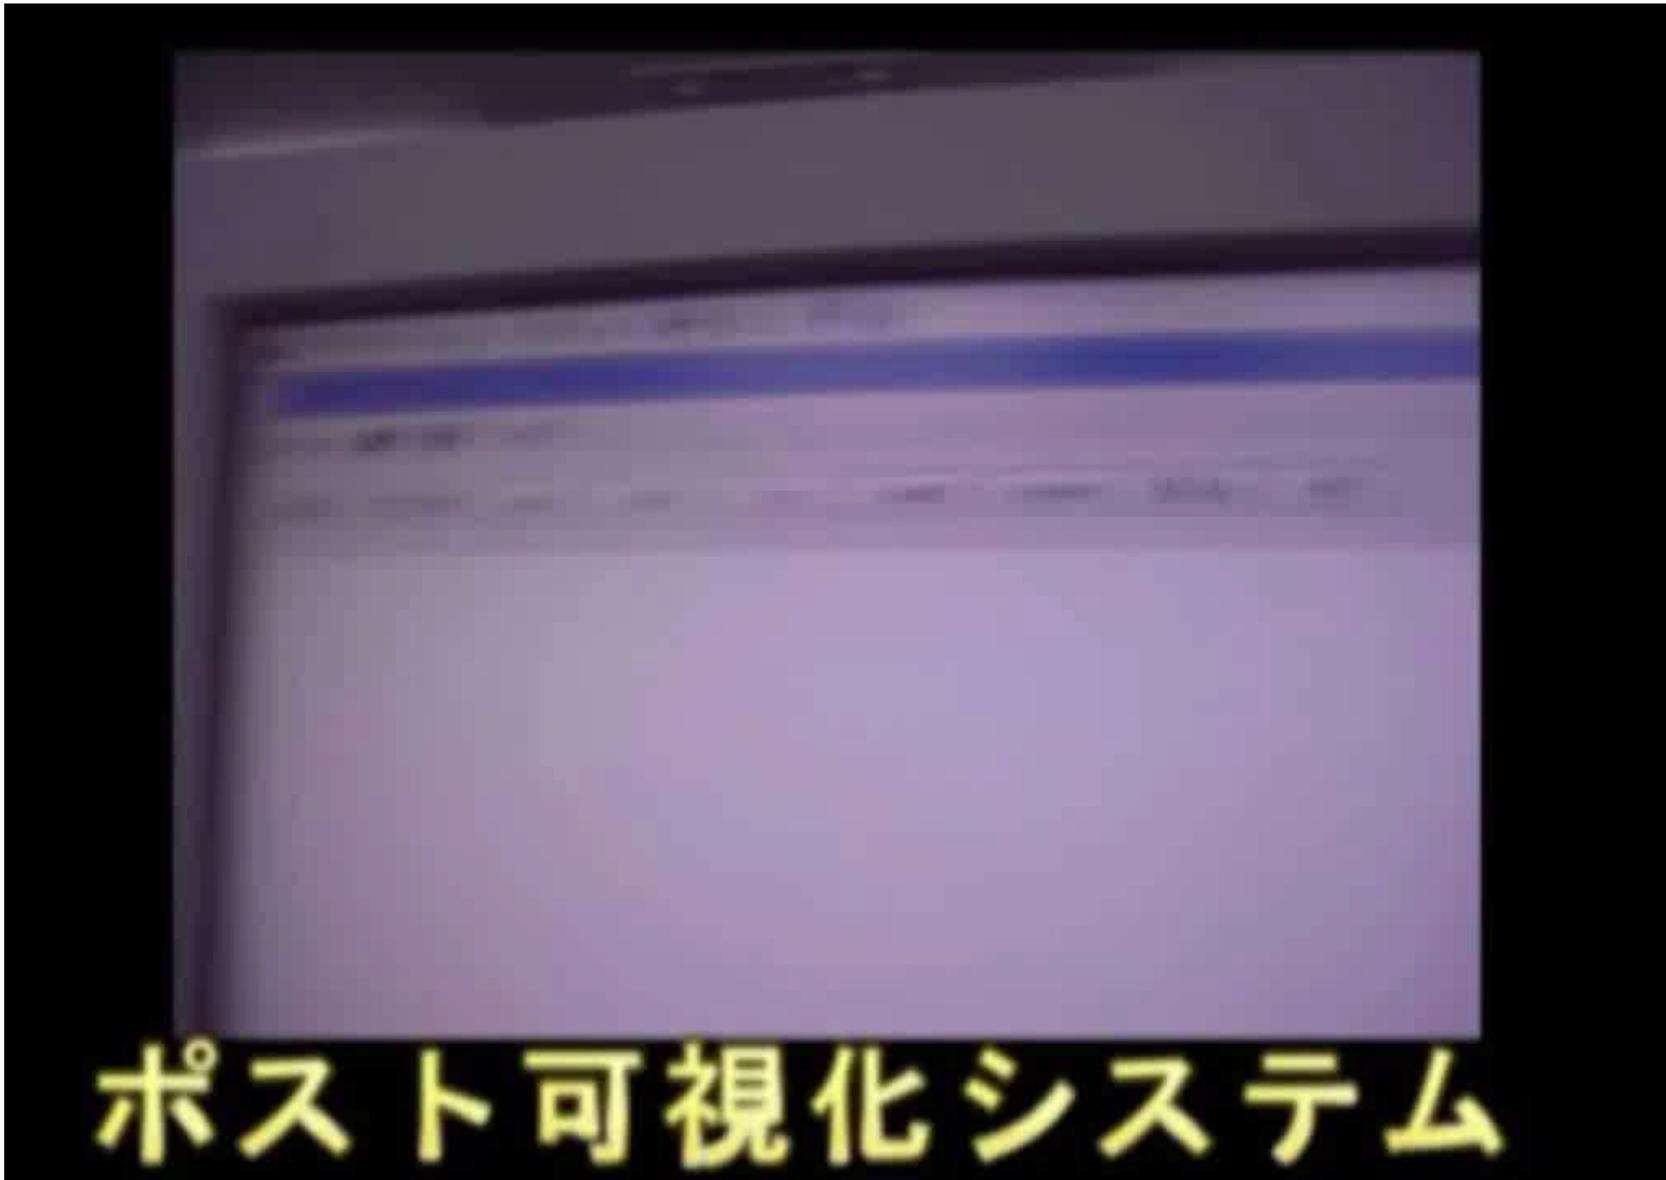

**Before surgery**

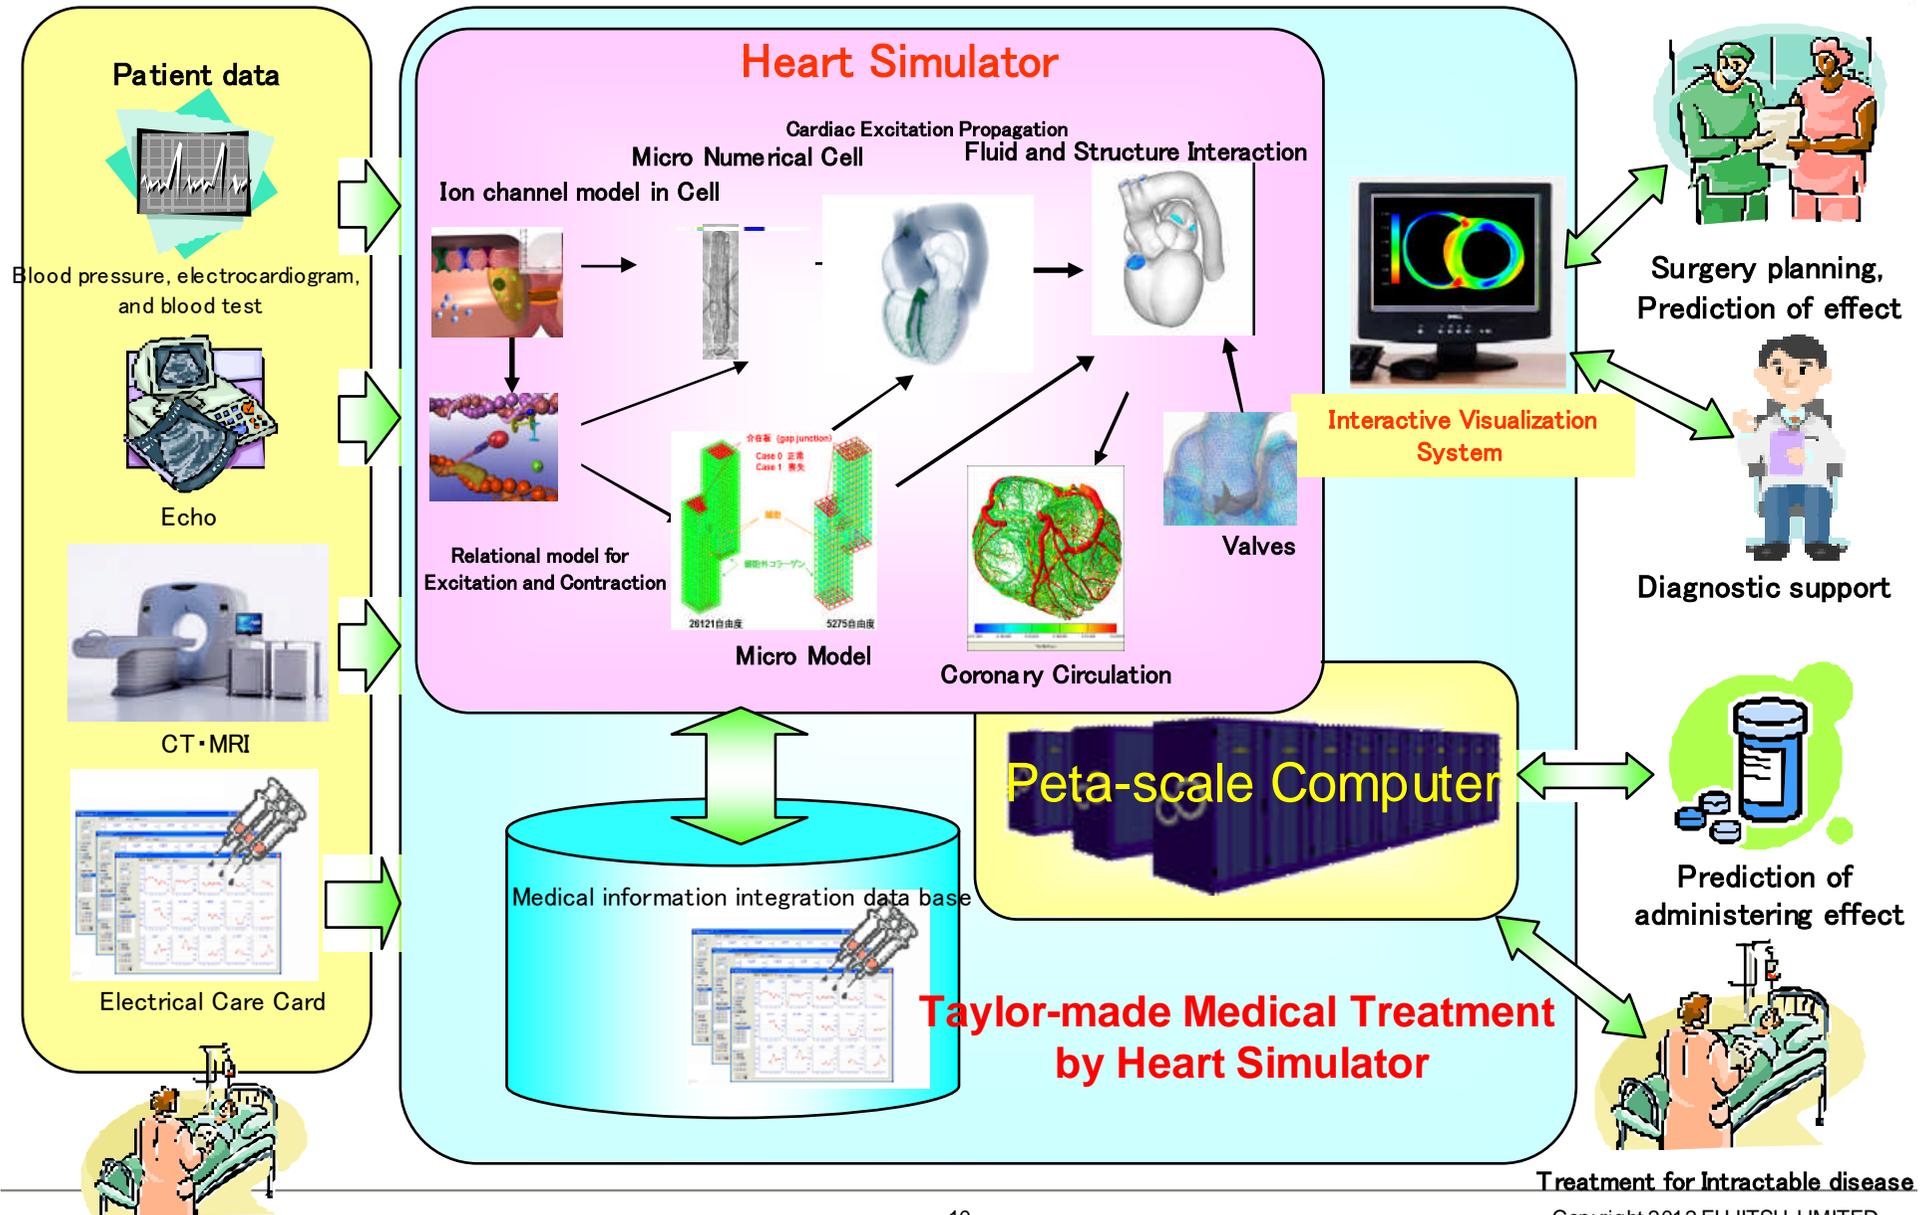

**Quantitative Prediction (QP) of Pressure - Volume**

**QP of Stress – Strain**

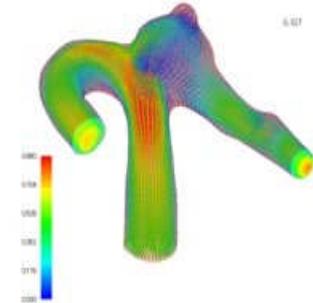

# New Medical System to realize Tailor-made Medicine in the Cloud

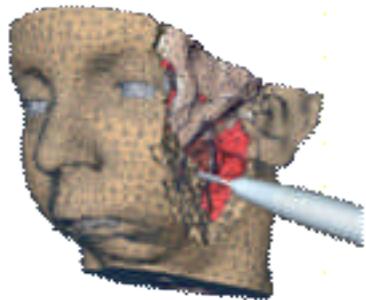

# Other approaches for medical therapy based on computer simulation: Examples

- Image-based modeling and simulation of artery circulatory system disease such as aneurysm and arteriosclerosis:

Oshima Lab. In the University of Tokyo

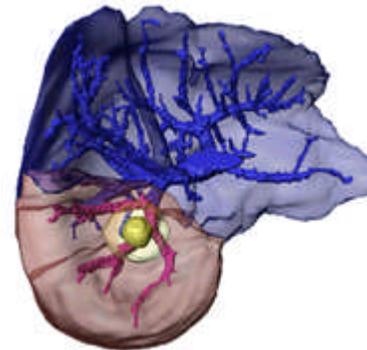

- Medical planning project in Zuse-Institute Berlin

**Computer Assisted  
Cranio-Maxillofacial  
Surgery**

**Reconstruction  
of Knee  
Anatomy for the  
Analysis of Knee  
Kinematics**

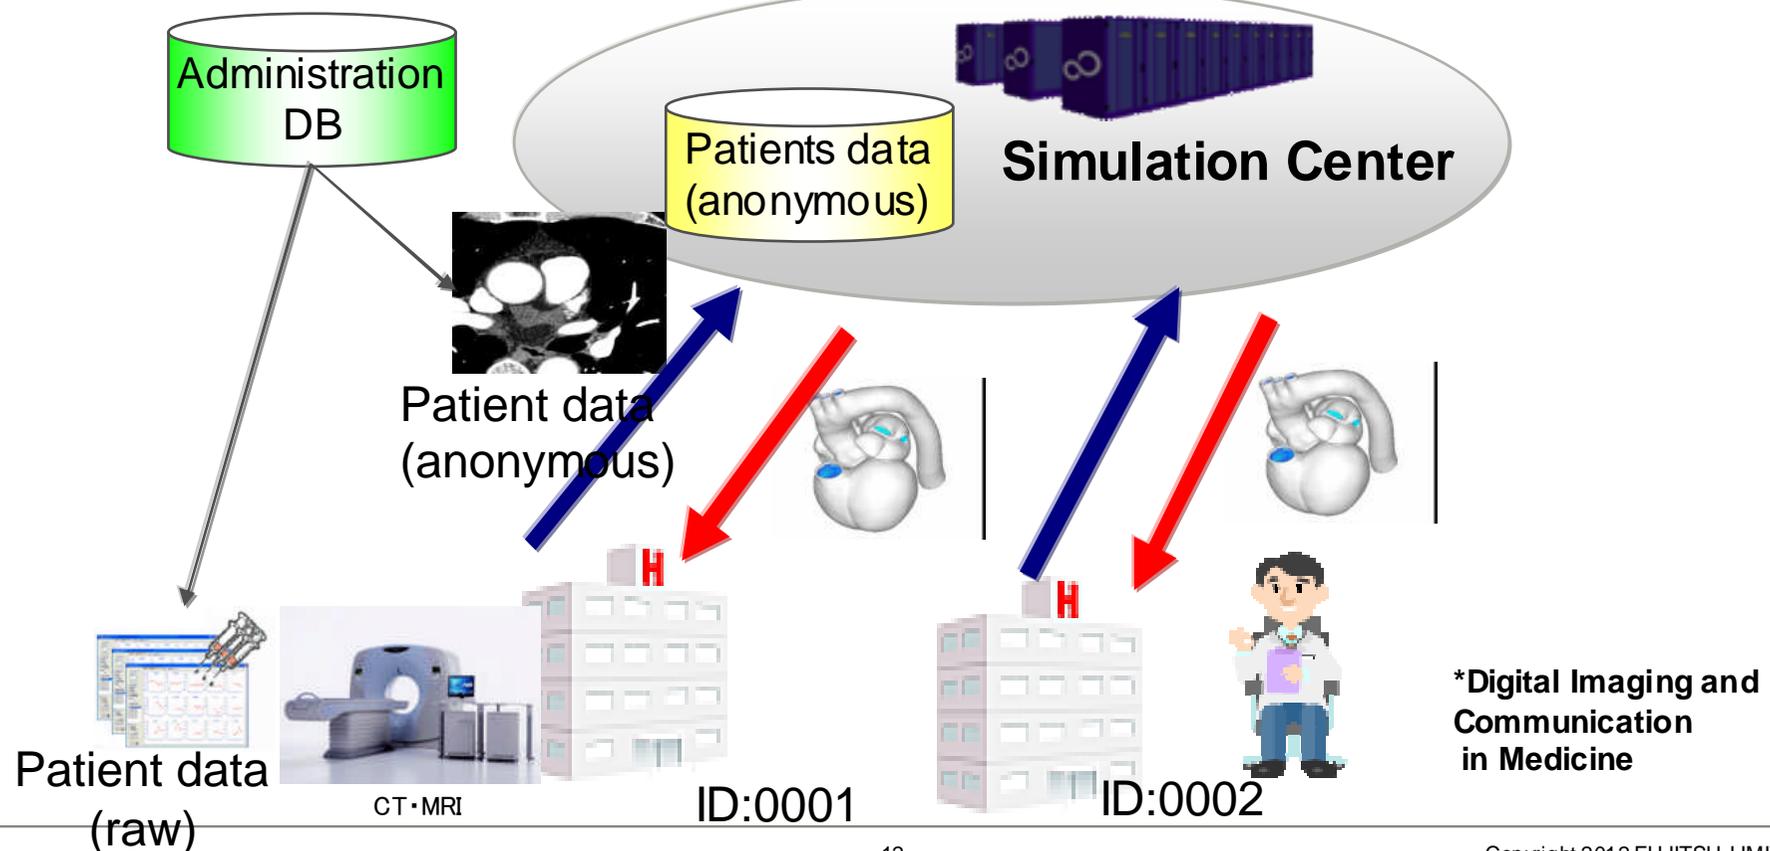

**Oncological  
Liver Surgery  
Planning**

**ENT-Surgery under  
consideration of  
optimal nasal air  
flow**

# Issues regarding Standardization

- To establish a security guide line to prevent the leaking of patients data and to implement it to all related system
- To establish a common data format to match an anonymized data with the corresponding patient raw data
- To integrate the localized specifications of DICOM\* data

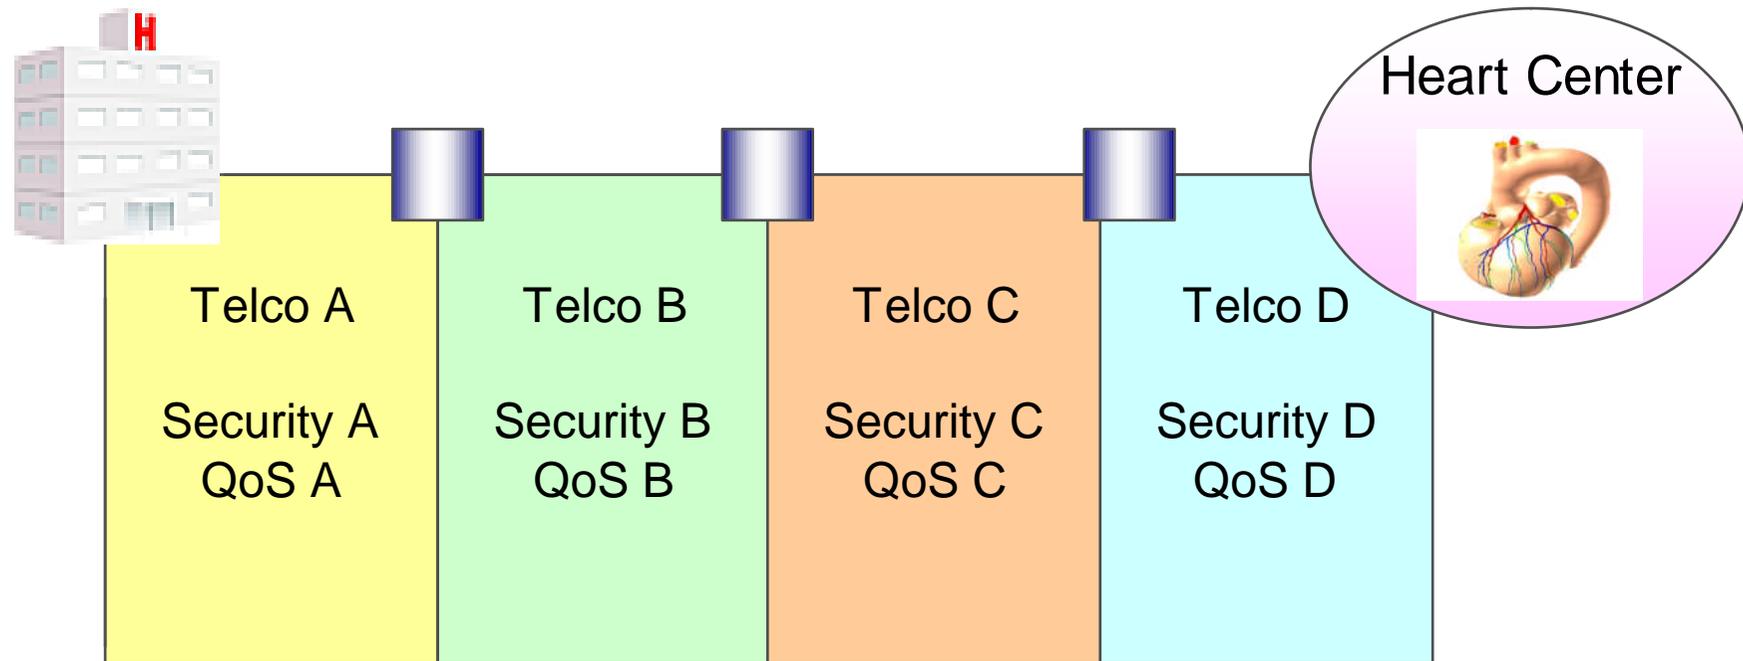

# Security Level and Universal QoS

- Protection for DoS Attack

- To guarantee Persistent Service and Emergency Response without any service interruption

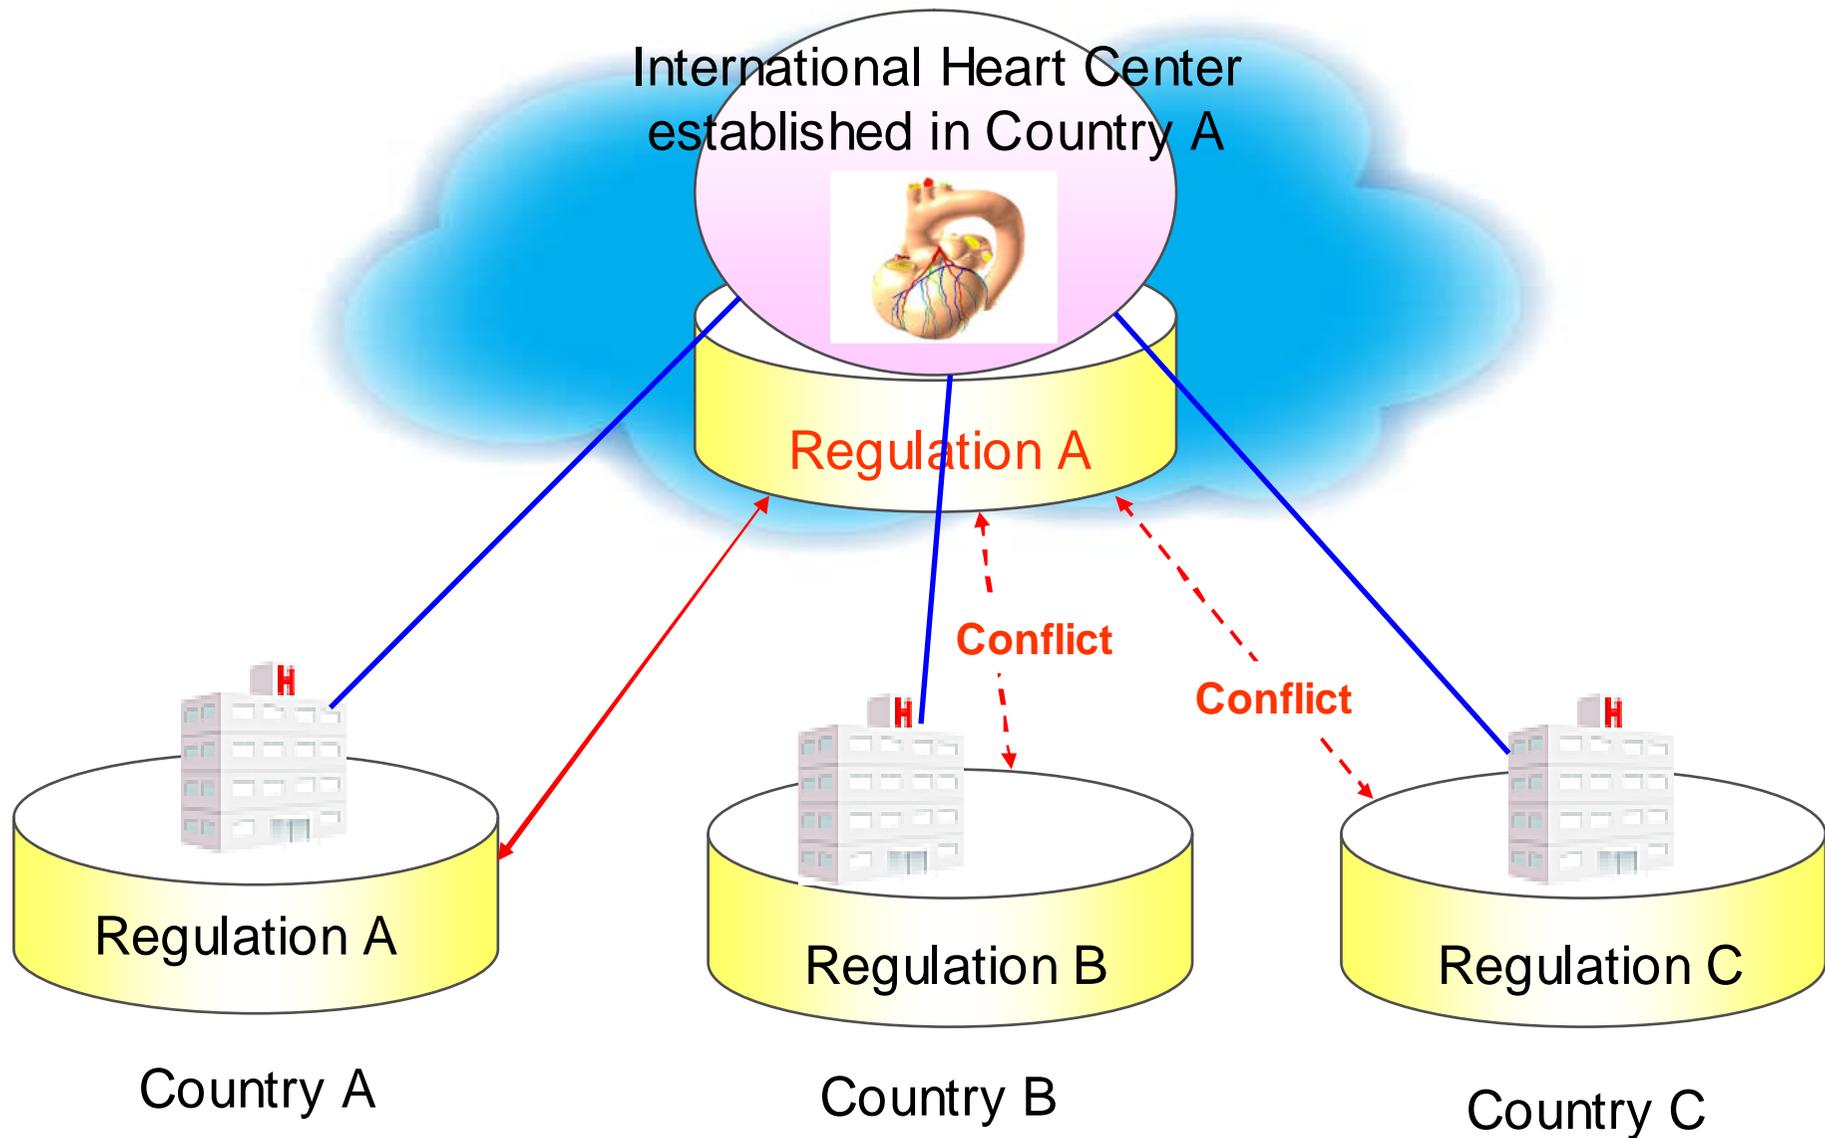

- To guarantee the minimum security level and QoS for all Telcos

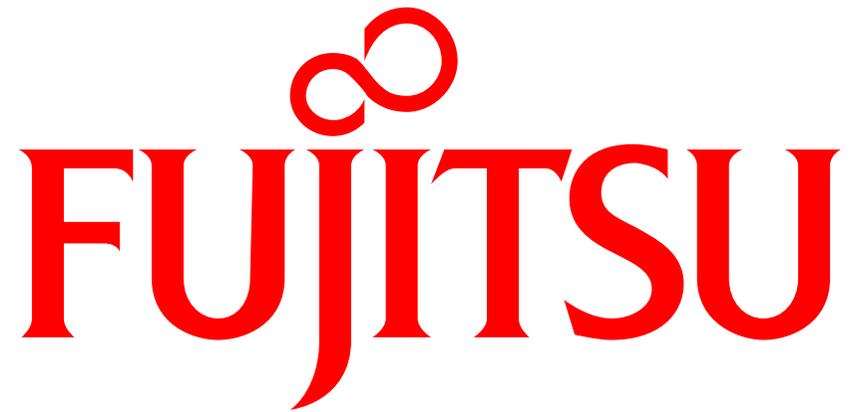

- International Leased Line Service across Several Telcos

- Not Best Effort, but Band-guaranteed System with Priority Control

# Which regulation should be applied?

**shaping tomorrow with you**
