

ICANN's Role and Key Challenges

Rodrigo de la Parra, VP Latin America and the Caribbean

ITU Regional Workshop on Strengthening Capacities in International Internet Governance
August 2017

What is ICANN?

Unique Names and Numbers

Anything connected to the Internet – including computers, mobile phones and other devices – has a unique number called its IP address. IP stands for Internet Protocol.

This address is like a postal address. It allows messages, videos and other packets of data to be sent from anywhere on the Internet to the device that has been uniquely identified by its IP address.

IP addresses can be difficult to remember, so instead of numbers, the Internet's domain name system uses letters, numbers and hyphens, to form a name that is easier to remember.

The background is a solid teal color with a complex, low-poly geometric pattern of overlapping triangles and polygons in various shades of teal and dark blue. The text is centered horizontally and positioned in the upper half of the image.

Mission, Values, and Role

ICANN's Mission

The mission of the Internet Corporation for Assigned Names and Numbers (ICANN) is to **ensure the stable and secure operation of the Internet's unique identifier systems**

Specifically, ICANN:

Coordinates the allocation and assignment of names in the root zone of the Domain Name System

Facilitates the coordination of the operation and evolution of the DNS root name server system

2

Coordinates the development and implementation of policies concerning the registration of second-level domain names in generic top-level domains (gTLDs)

4

Coordinates the allocation and assignment at the top-most level of Internet Protocol numbers and Autonomous System numbers

Collaborates with other bodies as appropriate to provide registries needed for the functioning of the Internet as specified by Internet protocol standards development organizations

ICANN's Commitments and Core Values

In performing its Mission, ICANN will act in a manner that complies with and reflects ICANN's Commitments and respects ICANN's Core Values

These Commitments and Core Values include:

Preserving and enhancing **stability, security, resiliency,** and **openness** of the DNS and the Internet

2

Employing **open, transparent** and **bottom-up,** multistakeholder policy development processes that are led by the private sector

3

Operating with **efficiency** and **excellence,** in a fiscally responsible and accountable manner

Other Partners

We all work together in different ways to help make the Internet work.

How Internet Protocol (IP) Addresses are Distributed

Multistakeholder Model

The background of the slide is a solid teal color with a complex, low-poly geometric pattern. The pattern consists of numerous overlapping triangles and polygons of varying shades of teal, creating a textured, crystalline effect. The text 'Multistakeholder Model' is centered horizontally and positioned in the upper half of the slide.

ICANN Multistakeholder Community

ICANN follows a bottom-up, multistakeholder model in which individuals, non-commercial stakeholder groups, industry, and governments play important roles in its community-based, consensus-driven, policymaking approach.

 Learn More ▶

<https://www.icann.org/community>

How Does the Multistakeholder Model Work?

Policy recommendations are developed and refined by the ICANN community through its Supporting Organizations (SOs) and influenced by Advisory Committees (ACs).

Exploring ICANN's Multistakeholder Community

Who Makes Up the ICANN Board?

Members are representatives from the community, selected in a bottom-up approach by their peers. The Board is composed of 15 voting directors and 4 non-voting liaisons, from different geographies and with expertise relevant to ICANN's mission.

SUPPORTING ORGANIZATION (SO) APPOINTEES:

Each of the three SOs nominates two directors:

Address Supporting Organization (**ASO**)

Country Code Names Supporting Organization (**ccNSO**)

Generic Names Supporting Organizations (**GNSO**)

INTERNET ENGINEERING TASK FORCE (IETF) APPOINTEE:

The IETF nominates one non-voting liaison.

VOTING MEMBERS

NOMINATING COMMITTEE APPOINTEES:

The Nominating Committee appoints eight seats.

ADVISORY COMMITTEE (AC) APPOINTEES:

Each of the four ACs nominates one member, although only the ALAC director can vote:

The At-Large Advisory Committee (**ALAC**)

The Governmental Advisory Committee (**GAC**)

The Root Server System Advisory Committee (**RSSAC**)

The Security and Stability Advisory Committee (**SSAC**)

y ICANN Board Facts

GEOGRAPHIC DIVERSITY:

No more than five voting members can be from any one region. No two voting members from any SO may be from the same region. The Nominating Committee must ensure the Board has at least one voting member from each region.

VOTING:

All Members participate in Board meetings, discussions, and deliberations, but the four non-voting liaisons cannot participate in formal votes.

THE NOMINATING COMMITTEE:

The Nominating Committee (NomCom) is responsible for appointing a number of seats to the ICANN Board, the ALAC, and the Councils of the ccNSO and the GNSO.

TERMS:

Voting members serve staggered three-year terms and cannot serve more than three consecutive terms.

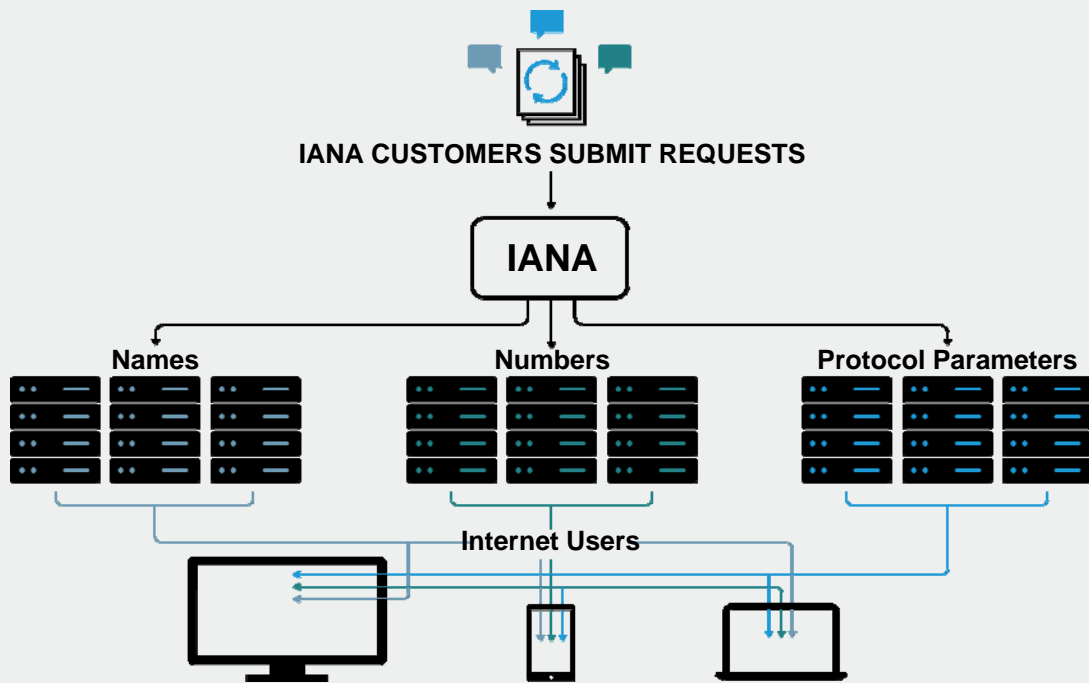

CONFLICTS OF INTERESTS:

Directors and liaisons annually disclose all business and affiliations that relate in any way to ICANN.

ANA Stewardship Transition

What are the IANA functions?

The IANA functions evolved in support of the Internet Engineering Task Force, and initially funded via research projects supported by the U. S. Department of Defense, Advance Research Projects Agency

These functions include:

- ⦿ The coordination of the assignment of technical Internet protocol parameters
- ⦿ The administration of certain responsibilities associated with Internet DNS Root zone management
- ⦿ The allocation of Internet IP addresses

ICANN was created to perform the IANA functions and has done so pursuant to a no-cost contract with the Department of Commerce for over 15 years
