

Laszlo Gabor Papocsi

He has been leading the knowledge transfer division of GAK Education, Research and Innovation Centre at St Istvan University, providing agricultural advisory and adult education services for farmers with special focus on the use of ICTs. He coordinated numerous EU financed projects (e-Farmer, SafefoodNet, Farmernet) related to e-agriculture, acted as quality assurance expert in similar other activities, participated in the introduction of national e-government services, primarily representing the requirements of farmers and advisors. He often takes assignments from FAO as consultant in ICTs for agricultural extension, participating in the creation of research, innovation and capacity development communication platforms in countries of Central Eastern and South East Europe. Recently he has been engaged in the organization of a series of regional training workshops on national e-agriculture strategies too, in collaboration with FAO and ITU. As a hobby (that lately becomes more like a job), he also develops software for farmers and advisors, being the creator of an online farm management system called 'farming logbook', the e-client portal for organic farmers, system of the buffalo breeders' association, etc.
